Spring 2018: The aim of this seminar can be described as trying to figure out how poetry and poetics figure into the effort to theorize the African American subject in the 21st Century. At a time when the sheer number of African American poets publishing today (to say nothing of the major prizes they are winning) has exploded exponentially, why does poetry continue to be so marginal in African American literary and cultural studies? As we make our way through recently published anthologies of African American poetry, then turn to works of individual poets, we will consider issues of influence, intertextual periodization, stylization, and tradition as they impact approaches to form, structure, and craft. Ultimately, however, we will focus on the question of why are these poets writing these poems at this particular time? Technologies like PennSound and YouTube will provide time? Technologies like PennSound and YouTube will provide important critical tools in our endeavors and at various points during the term, guest lecturers will join our discussions.
Taught by: Beavers, Tillet
Course not offered every year
Also Offered As: ENGL 570, GWS 570
Activity: Seminar
1 Course Unit

**AFRC 571 Visualizing W.E.B. DuBois**
This seminar will focus on a project that views history as a result of our contemporary society in which biographical truths are constantly shifting. So the historical biographers write about the way they remembered and visualize the past, and not about the way that it happened. We will take Du Bois's biography in his own words and interrogate his narrative with the visual narratives of his life and influence produced by others. "Visualizing W.E.B Du Bois" focuses on photographic, film, and video representations intended to present some aspect of Du Bois's reality, primarily for the purposes of instruction or maintaining a historical record. Such projects include photos, materials originally shot on film stock, and digital images that can be either displayed in a book or magazine, and moving images made into a film or video for a TV show or released for screening in cinemas, or other broadcast mediums like YouTube and Vimeo.
Taught by: ZUBERI
Course not offered every year
Also Offered As: SOC 570
Activity: Seminar
1 Course Unit

**AFRC 572 Topics in African Literature**
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions of established writers in their use of old forms and experiments with new. See the Department's website at www.africana.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CIMS 572, COML 575, ENGL 572
Activity: Seminar
1 Course Unit

**AFRC 575 TPE: Qualitative Studies of Developmental Interventions**
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.
Course not offered every year
Also Offered As: EDUC 575
Activity: Seminar
1 Course Unit

**AFRC 587 Race, Nation, Empire**
This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anti-colonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts- past and present- especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.
Taught by: Thomas
Course usually offered in spring term
Also Offered As: ANTH 587, GSWS 587, LALS 588
Activity: Seminar
1 Course Unit

**AFRC 590 Introduction to Francophone Studies**
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.
Course not offered every year
Also Offered As: COML 596, FREN 590
Activity: Seminar
1 Course Unit

**AFRC 591 Francophone Postcolonial Studies**
Please see the department's website for current course description:
https://africana.sas.upenn.edu
Course not offered every year
Also Offered As: FREN 591
Activity: Seminar
1 Course Unit
Notes: An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.
AFRC 594 Post-Colonialism Literature
This course covers topics in Post-Colonial literature with emphasis determined by the instructor. The primary focus will be on novels that have been adapted to film. See the Department’s website at www.africana.upenn.edu for a complete description of the current offerings.
Also Offered As: ENGL 595
Activity: Seminar
1 Course Unit

AFRC 601 Colonialism: A Global Phenomenon
Taught by: ABIOLA
One term course offered either term
Also Offered As: EDUC 545
Activity: Seminar
1 Course Unit

AFRC 602 Stereotype Threat, Impostor Phenomenon, and African Americans
Taught by: ABIOLA
One term course offered either term
Also Offered As: EDUC 545
Activity: Seminar
1 Course Unit

AFRC 605 Anthropology of Music
Topics may include the intellectual history of ethnomusicology, current readings in ethnomusicology, a consideration of theoretical principles based upon the reading and interpretation of selected monographs, and area studies. Please see department website for current course term description.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Open to graduate students from all departments

AFRC 610 Topics in American History
This course is cross-listed with HIST 610 (Colloquium in American History) when the subject matter is related to African, African American, or other African Diaspora issues. See the Africana Studies Department’s website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Savage
Course usually offered in fall term
Also Offered As: HIST 610
Activity: Seminar
1 Course Unit

AFRC 620 Advanced Topics in Africana Studies
This course will deal with Law and Society in Africa. After surveying the various legal systems in Africa, the focus will be on how and to what extent the countries of Africa re-Africanized their legal systems by reconciling their legal systems that are used as instruments of social change and development. Toward this end, the experiences of various African countries covering the various legal traditions will be included. Specific focus will be on laws covering both economic and social relations. This emphasis includes laws of marriage, divorce and inheritance, laws of contracts and civil wrongs and African’s law of investments and International Relations, among other laws. Throughout this course a comparative analysis with non-African countries will be stressed. Readings include research papers, reports, statutes, treaties, and cases.
Taught by: Charles, Zuberi, Fetni
One term course offered either term
Also Offered As: AFRC 420, SOCI 460, SOCI 660
Activity: Lecture
1 Course Unit
Notes: See the Africana Studies Department’s course list at https://africana.sas.upenn.edu for a description of the current offering.

AFRC 630 Advanced Special Topics in Sociology
This course will examine demographic and statistical methods used to capture the impact of racial stratification in society. This course covers the skills and insights used by demographers and social statisticians in the study of racial data. A key challenge facing researchers is the interpretation of the vast amount of racial data generated by society. As these data do not directly answer important social questions, data analysis and statistics must be used to interpret them. The course will examine the logic used to communicate statistical results from racial data in various societies. We will question the scientific claims of social science methodology by extending the critical perspective to biases that may underlie research methods. We will discuss good and bad practices within the context of the historical developments of the methods. This advanced special topics course and course description is for Fall 2017 only.
Taught by: Zuberi
One term course offered either term
Also Offered As: DEMG 630, SOCI 630
Activity: Seminar
1 Course Unit
Notes: This course is cross-listed with SOCI 630 (Advanced Topics in Sociology) when the subject matter is related to African American or other African Diaspora issues. A frequent topic of this course is “Race, Colonialism and Methods”

AFRC 632 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.
Course not offered every year
Also Offered As: AFRC 332, NELC 332, NELC 632
Activity: Seminar
1 Course Unit
AFRC 638 Race and Criminal Justice
Taught by: Gottschalk
Course not offered every year
Also Offered As: AFRC 437, PSCI 437, PSCI 638
Activity: Seminar
1 Course Unit

AFRC 640 Proseminar in Africana Studies
This course focuses on the historical and cultural relationship between
Africans and their descendants abroad.
Taught by: Beavers, Butler, Charles, Rommen, Savage, Thomas, Williams,
Zuberi
Two terms. Student must enter first term.
Also Offered As: COMM 740, RELS 617
Activity: Seminar
1 Course Unit

AFRC 641 Topics in African American History
Topics vary, See the Africana Studies Department’s website at https://
africana.sas.upenn.edu for a description of the current offerings.
Taught by: Williams, Savage
Course usually offered in spring term
Also Offered As: HIST 641
Activity: Seminar
1 Course Unit

AFRC 645 Graduate Research Seminar
SPRING 2017: This seminar is suitable for graduate students in any
discipline in which historical research may be relevant. We will work
with both secondary and primary sources, and students will have the
opportunity to visit and undertake research in an archive.
Taught by: Williams
One-term course offered either term
Also Offered As: HIST 645
Activity: Seminar
1 Course Unit

AFRC 650 Topics in African History
Reading and discussion course on selected topics in African history.
Taught by: Babou, Cassanelli
Also Offered As: HIST 650
Activity: Seminar
1 Course Unit

AFRC 670 Topics in Trans Regional History
Reading and discussion course on selected topics in Transregional
History See the Africana Studies Department’s website at https://
africana.sas.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GSWS 670, HIST 670
Activity: Seminar
1 Course Unit

AFRC 701 African Studies Seminar
Interdisciplinary seminar for discussion of issues of special interest to
graduate students and faculty in Africana Studies. Topics vary according
to the interests and expertise of instructors. SPRING 2017 - Readings
in African American Religion: Traditional narratives of African American
Religion go from slavery to civil rights to "freedom" without taking into
account the complex religious lives and intellectual production of people
of African descent in the Americas. This course will focus on African
American Religion and the historical and theoretical frameworks that
have shaped the study of this field. Readings will cover religious studies,
anthropology history, and African American studies in order to provide an
understanding of the varieties of religion and religious experiences with
this particular segment of the African Diaspora.
Taught by: Butler
Course not offered every year
Also Offered As: ENGL 775, RELS 701
Activity: Seminar
1 Course Unit

AFRC 705 Seminar in Ethnomusicology
Topics in Ethnomusicology. Please see department website at
www.africana.upenn.edu for current term course descriptions.
Taught by: Muller, Rommen, Sykes
Course usually offered in fall term
Also Offered As: ANTH 705, MUSC 705
Activity: Seminar
1 Course Unit
Notes: Open to graduate students from all departments.

AFRC 706 Introduction to Africa and African Diaspora Thought
This course examines the processes by which African peoples have
established epistemological, cosmological, and religious systems both
prior to and after the institution of Western slavery.
One-term course offered either term
Activity: Seminar
1 Course Unit

AFRC 708 Cultural and Literary Theory of Africa and the African Diaspora
This course introduces students to the theoretical strategies underlying
the construction of coherent communities and systems of representation
and how those strategies influence the uses of expressive culture over
time. Topics vary. See the Africana Studies Department’s website at
https://africana Studies.sas.upenn.edu for a description of the current
offerings.
One-term course offered either term
Also Offered As: ENGL 775, FREN 700
Activity: Seminar
1 Course Unit
AFRC 710 Political Economy and Social History of Africa and the African Diaspora
This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances. Topics vary. FALL 2017: FASCISM AND RACISM: A LOVE STORY. What is the relationship between fascism and racism in modern politics, and how have black political thinkers and organizations understood this relationship? This graduate level course is designed to familiarize students with the historical and contemporary literature on fascism as a phenomenon of modern politics, and the importance of racial politics and ideologies to its constitution. Students will become familiar with the contributions of Black political actors, organizations and thinkers in Europe, Africa, Asia and the New World to fascism's defeat in the 1920's and 1930's, as well as more contemporary efforts to curb more contemporary fascist movements, regimes and aesthetics in late modernity. Antonio Gramsci, Robert Paxton, Michael Mann, C.L.R James, George Padmore, Aime Cesaire, Suzanne Cesaire and Hannah Arendt are among the thinkers, theorists and activists students will encounter in this course. The overarching aim of his course is to identify fascism in both historical and contemporary contexts as a very specific form of political organization and rule, and its interrelationship with racism, nationalism and xenophobia.
Taught by: Hanchard, Zuberi
Two terms. student must enter first term.
Also Offered As: COML 710, HIST 710, LALS 710, PSCI 711, SOCI 702Activity: Seminar
1 Course Unit

AFRC 712 Comprehensive School Reform as Applied Public Policy
This course examines how K-12 education policy is designed and implemented in the United States. It uses a systems analysis as the framework for looking at who makes what kinds of demands on the education policy system, how those demands are placed on the policy agenda, the decision making process, and resulting education policies and policy outcomes. The course pays particular attention to the roles of federal, state and local governments in education policy, and the impact of our intergovernmental system on the design and implementation of policy. Students will also examine major education policies and debate key education policy issues that arise at each level of government.
Taught by: Hershberg
One-term course offered either term
Also Offered As: EDUC 712
Activity: Seminar
1 Course Unit

AFRC 720 Graduate Prospectus and Grant-Writing Seminar
This course is intended to help students to write a strong dissertation proposal/prospectus. A proposal is a detailed plan for a long journey of conceptualization, research, and writing that will lead to the first major, independent scholarly contribution. Students will work closely with advisors, peers, and the professor in the course, to develop the questions, methodological approaches, and theoretical perspectives that will guide their research and writing. At the end of the semester, each student will have completed a proposal, and will be ready to defend it.
Taught by: Williams
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Graduate student must be "All But Dissertation" (ABD).

AFRC 740 Research Seminar in Middle Eastern History
Taught by: Troutt-Powell
Also Offered As: GSWS 740, HIST 740
Activity: Seminar
1 Course Unit
Notes: Research seminar on selected topics in Middle Eastern history.

AFRC 770 Afro-American American Literature
How does Elizabeth Alexander's poem Praise Song for the Day, written for the inauguration of Barack Obama, relate to Amiri Barakas 9/11 poem Somebody Blowed America? This seminar will explore the un-naming and experimentation that shape African American literature and theory in the early years of the 21st century. Frameworks of the seminar will include the post-9/11 novel, the poetics of the black, black abstraction, twenty-first century practices of the black diaspora Age of Obama turn to the satirical. Critical texts such as How to See a Work Total Darkness and Abstractionist Aesthetics will be as central as cutting edgewash as The Psychic Hold of Slavery and signature essays such as On Failing to the Past Present. This course will focus on the new literary voices that have the 21st century and, also, writers whose 21st century art is the late stage ofatory trajectory. Special attention will be given to Toni Morrison, Colson Whitehead, Octavia Butler, Claudia Rankine, Mat Johnson, and Paul Beatty.
Course not offered every year
Also Offered As: ENGL 770
Activity: Seminar
1 Course Unit

AFRC 771 Seminar in Afro-American Music
This seminar treats selected aspects of the history, aesthetics, criticism and historiography of African American music. Topics vary. See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.
Taught by: Ramsey
Course not offered every year
Also Offered As: MUSC 770
Activity: Seminar
1 Course Unit

AFRC 797 Advance Topics in Africana Studies
Topic varies.
One-term course offered either term
Activity: Seminar
1 Course Unit

AFRC 799 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. See the Africana Studies website at www.africana.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ENGL 799
Activity: Seminar
1 Course Unit
Anatomy (ANAT)

ANAT 505 Structural Adaptations to Function
Veterinary gross anatomy course. The basic principles of mammalian and avian anatomy are studied in a veterinary context. The laboratory periods are given to the dissection of the dog, cat, horse, various ruminants, various laboratory animals, chicken and fish.
Taught by: Dr. Orsini and Staff
Course usually offered in fall term
Prerequisite: Permission of instructor in Veterinary School
Activity: Lecture
2 Course Units

ANAT 512 Human Anatomy: Cardiovascular, Respiratory, Digestive, and Musculoskeletal Systems
This human anatomy course will cover anatomy, embryology, histology, and imaging of the cardiovascular system; respiratory system; digestive system; and musculoskeletal system, including the limbs, vertebral column, and back. Cardiovascular and Respiratory Systems. The objectives are to: 1) define and discuss the structures that participate in the process of respiration; 2) compare and contrast structures situated in the chest (thorax and mediastinum); 3) describe anatomic differences of the right versus the left lung, structures in each lung, and how each lung functions; 4) summarize the anatomic differences in the atra and ventricles of the heart and how these chambers contract, resulting in the opening and closing of the atrioventricular and semilunar valves; 5) compare and contrast the histology of the heart, bronchi, bronchioles, and lung alveoli; 6) analyze and identify anatomic structures in plain films and/or other imaging modalities; and 7) discuss the embryology of the heart and lungs, including fetal and postnatal circulation and common congenital heart malformations.
Taught by: White, James S.
Activity: Online Course
0.5 Course Units
Notes: This course is offered through the School of Medicine Office of Master’s Programs. For permits, please email Kim Halscheid (battilo@upenn.edu) and Kathryn Brossa (brossak@pennmedicine.upenn.edu).

ANAT 513 Human Anatomy: Cardiovascular and Respiratory Systems
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the cardiovascular and respiratory systems. The objectives are to: 1) define and discuss the structures that participate in the process of respiration; 2) compare and contrast structures situated in the chest (thorax and mediastinum); 3) describe anatomic differences of the right versus the left lung, structures in each lung, and how each lung functions; 4) summarize the anatomic differences in the atra and ventricles of the heart and how these chambers contract, resulting in the opening and closing of the atrioventricular and semilunar valves; 5) compare and contrast the histology of the heart, bronchi, bronchioles, and lung alveoli; 6) analyze and identify anatomic structures in plain films and/or other imaging modalities; and 7) discuss the embryology of the heart and lungs, including fetal and postnatal circulation and common congenital heart malformations.
Taught by: James S. White, PhD
Prerequisites: Students who have completed ANAT 512 are NOT eligible for this course.
Activity: Online Course
0.5 Course Units

ANAT 514 Human Anatomy: Digestive System
This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the digestive system. The objectives are to: 1) define the embryological basis for the formation of the gastrointestinal tract; 2) define and discuss the anatomic structures that make up the digestive system, including the mouth, larynx, esophagus, stomach, small intestine, large intestine, liver, and biliary tract; 3) compare and contrast the arterial blood supply and the functional and histologic differences in various parts of the gastrointestinal tract; and 4) analyze and identify anatomic structures in plain films and/or other imaging modalities.
Taught by: James S. White, PhD
Prerequisites: Students who have completed ANAT 512 are NOT eligible for this course.
Activity: Online Course
0.5 Course Units

ANAT 515 Human Anatomy: Musculoskeletal System
This 1.0 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the musculoskeletal system, including the limbs, vertebral column, and back. The objectives are to: 1) discuss the anatomic structures that make up the major parts of the musculoskeletal system, which are the vertebral column and back, upper limbs, and lower limbs; 2) identify the blood supply, innervation, and musculature of the upper limbs, including the shoulder, elbow, wrist, and hand; 3) identify the blood supply, innervation, and musculature of the lower limbs, including the hip, knee, ankle, and foot; 4) define the components of the nervous system that affect the musculoskeletal system, limbs, vertebral column, and back and discuss nerve lesions; 5) discuss how herniated disks, fractures of the upper and lower limbs, and impingement of nerve roots can result in musculoskeletal abnormalities; and 6) analyze and identify anatomic structures in plain films and/or other imaging modalities.
Taught by: James S. White, PhD
Prerequisites: Students who have completed ANAT 512 are NOT eligible for this course.
Activity: Online Course
1 Course Unit

ANAT 516 Human Anatomy: Endocrine and Reproductive Systems
Taught by: This 0.5 CU human anatomy course will cover anatomy, embryology, histology, and imaging of the endocrine and reproductive systems. The objectives are to: 1) define mechanisms of hormonal signaling; 2) describe the anatomic relationships and gross structure of major endocrine and reproductive organs, including the hypothalamus, pituitary glands, thyroid gland, parathyroid glands, pancreas, adrenal glands, gonads, breasts, and male and female reproductive systems; 3) characterize the microscopic anatomy of major endocrine and reproductive organs; 5) assess the regulation of major hormonal axes and intuit pathophysiologic effects of hormonal dysregulation; 6) explain the effects of significant hormones on their respective target tissues; 7) trace the embryologic origins of the endocrine and reproductive organs, including the pharyngeal apparatus.
Activity: Online Course
0.5 Course Units
Ancient History (ANCH)

ANCH 025 Ancient Middle Eastern History and Civilization
A cultural history of Middle Eastern civilization from the invention of writing to the rise of Islam.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Also Offered As: HIST 024, NELC 101
Activity: Lecture
1 Course Unit

ANCH 026 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles' Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, "Know Thyself." For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.
For BA Students: History and Tradition Sector
Taught by: Molnerney
Course usually offered in fall term
Also Offered As: CLST 026, HIST 026
Activity: Lecture
1 Course Unit

ANCH 027 Ancient Rome
The Roman Empire was one of the few great world states-one that unified a large area around the Mediterranean Sea-an area never subsequently united as part of a single state. Whereas the great achievements of the Greeks were in the realm of ideas and concepts (democracy, philosophy, art, literature, drama) those of the Romans tended to be in the pragmatic spheres of ruling and controlling subject peoples and integrating them under the aegis of an imperial state. Conquest, warfare, administration, and law making were the great successes of the Roman state. We will look at this process from its inception and trace the formation of Rome's Mediterranean empire over the last three centuries BC; we shall then consider the social, economic and political consequences of this great achievement, especially the great political transition from the Republic (rule by the Senate) to the Principate (rule by emperors). We shall also consider limitations to Roman power and various types of challenges, military, cultural, and religious, to the hegemony of the Roman state.
Finally, we shall try to understand the process of the development of a distinctive Roman culture from the emergence new forms of literature, like satire, to the gladiatorial arena as typical elements that contributed to a Roman social order.
For BA Students: History and Tradition Sector
Taught by: Cam Grey
Course usually offered in spring term
Also Offered As: CLST 027, HIST 027
Activity: Lecture
1 Course Unit

ANCH 046 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hurrians, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.
For BA Students: History and Tradition Sector
Taught by: Frame
Course usually offered in spring term
Also Offered As: NELC 046, RELS 014
Activity: Lecture
1 Course Unit

ANCH 129 The Decline and Fall of the Roman Empire?
Also Offered As: CLST 129
Activity: Lecture
1 Course Unit

ANCH 146 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most successful and influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.
Taught by: Wilker
Course usually offered in fall term
Also Offered As: CLST 146
Activity: Lecture
1 Course Unit
ANCH 202 Cleopatra
Cleopatra VII (70/69 30 BCE) is one of the most famous women in world history. She has been remembered, admired, and reproached as a power-hungry Hellenistic queen, as the last pharaoh of Egypt, as a self-confident female ruler, and as the vicious seductress of Julius Caesar and Mark Antony. Her supposedly extravagant lifestyle, her political schemes, but also her integrity in choosing suicide over submission have inspired poets, artists, and historians from her own time to our modern world. In this seminar, we will take a closer look at some of the common perceptions and stereotypes that have shaped the image of Cleopatra for more than 2000 years. The main focus, however, will be on the historical queen, her biography, and the political and cultural contexts of her life. We will use ancient literary texts, papyri, inscriptions, coins, and archaeological evidence to analyze Cleopatra’s rise to power, how she presented herself to her subjects, and how she was perceived by others, as well as her role in the tumultuous events that led to the end of the Hellenistic period and the rise of imperial Rome under the rule of Augustus. No prerequisites, but some background in Hellenistic and/or Roman history will be helpful. Taught by: Julia Wilker
Course not offered every year
Also Offered As: CLST 202
Activity: Seminar
1 Course Unit

ANCH 220 Near East in Hellenistic and Roman Times
In this course, we will study the history of the Hellenistic and Roman period a from a Near Eastern perspective. From the conquests of Alexander the Great to the end of Roman rule in late antiquity, this region was the scene of conflicts, but also of peaceful and fruitful interactions between Greeks, Romans, Egyptians, Jews, Syrians, Arabs and many other societies. What was the impact of Greek and Roman rule and how did the inhabitants of the region react to these fundamental changes? On the other hand, how did they influence the culture and worldview of their conquerors? We will use historical texts, documents and archaeological evidence to discuss the political, cultural and religious encounters that made the Near East a key region of Greco-Roman history. All texts will be discussed in translation. No prerequisites, although it would be useful to have taken ANCH 026 and/or ANCH 027. Taught by: Wilker
Course not offered every year
Also Offered As: NELC 284
Activity: Seminar
1 Course Unit

ANCH 275 The Roman Underbelly
Conventional histories of Rome tend to focus on the actions of the named individuals who wrote the texts that have come down to us, or are the subjects of those texts. But these individuals constituted only the tiniest fraction of the population of the Roman world. In this course, we will explore the lived experience of the other 95%; peasants and the poor; prostitutes, pimps, and criminals; bandits and pirates; magicians and soothsayers. Drawing on the scattered and problematic textual sources, archaeological evidence and comparative perspectives from better-documented contexts, we will examine the various roles that these individuals played in Roman society, the collection of often discordant or dissonant attitudes of their wealthier and more powerful contemporaries, and the challenges and opportunities that attend the social history of marginality in the ancient world. No prior knowledge of Roman History is required, although it would be useful to have taken ANCH 027, the introductory survey course. Texts will be discussed in translation. Taught by: Cam Grey
Course not offered every year
Activity: Seminar
1 Course Unit

ANCH 301 Lies My Ancient History Teacher Told Me
The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome’s acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 026 and/or ANCH 027. Taught by: Grey
Course not offered every year

ANCH 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine Ancient Greece and Rome as the cradles of democracy and republicanism, the early Judea as pious theocracy, but the evidence tells us that monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). Despite their ubiquity, the King was a polarizing figure in reality and in conception. On the one hand, some idealized the monarchy as the ideal leader, and monarchy provided the language with which to describe and even imagine the very godself on the other, monarchs were widely reviled in both theory and practice, from the Greek tyrant to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal ruler and the worst form of government. This class confronts the paradox of the King. This class will take a special look at the idea and institution of kingship in the Near East, among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences among these cultures. Through the lens of the king we will explore the idea of god, government, human frailty, and utopianism. Why did the rule of one prevail, why was it so attractive to so many? How was royal rule legitimized? What role did religious beliefs play for keeping a monarchical system stable? What did people expect from their rulers and what happened if the ruler failed to fulfill these expectations? How was the concept of monarchical rule adopted and transferred into other spheres, such as religious belief systems or hopes for messianic kingship? While kingship is a rich field of scholarly inquiry, the question of its ubiquity, and the entanglement and divergences of these three cultures is rarely studied in context and in comparison.

ANCH 305 Jewish Diaspora in the Roman Empire
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.

ANCH 311 Disasters in the Ancient World
Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. In the ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals’ fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is, of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken an introductory survey course. Texts will be discussed in translation.

ANCH 323 Greek World After Alexander the Great
This class is designed as a detailed investigation of the world created by Alexander the Great. We will cover the three-hundred-year period known as the Hellenistic Age from the career of Alexander the Great (354-323 BC) until the defeat of Antony and Cleopatra at the Battle of Actium (31 BC). This was a period during which the world of the Greeks underwent extraordinary and far-reaching changes, as Greek culture was established as far afield as northwestern India, central Asia and Egypt. In the same period, kingdoms controlled by Alexander’s successors used Greek culture to define their rule, establishing a Greek culture of the elite in regions which previously had been dominated by the Persians. As Greek and non-Greek worlds collided, a new interpretation of Greek culture emerged, giving rise, among other things, to universities and professional schools, state subsidized health care, triumphant architecture, the heroization of the noble savage, coinage with royal portraits, the deification of men and a multitude of other social, artistic and political forms familiar to us. It was an age of radical change, dislocation, as Greek populations colonized regions previously unknown to them.

ANCH 330 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbarian culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be laid on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. That will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

ANCH 384 The Hellenistic and Roman Near East
In this course we will study the history of the Hellenistic and Roman period from a Near Eastern perspective. From the conquests of Alexander the Great to the end of Roman rule in late antiquity, this region was the scene of conflicts, but also of peaceful and fruitful interactions between Greeks, Romans, Egyptians, Jews, Syrians, Arabs and many other societies. What was the impact of Greek and Roman rule and how did the peoples of the region react to these fundamental changes? On the other hand, how did they influence the culture and worldview of their conquerors? We will use historical texts, documents and archaeological evidence to discuss these political, cultural and religious encounters that made the Near East a key region of Greco-Roman history. All texts will be discussed in translation. No prerequisites, although it would be useful to have some background in Hellenistic and/or Roman history.

ANCH 527 Topics in the Art of Iran
Topic varies. Spring 2018. The pro-seminar will examine aspects of continuity and rupture in the visual culture(s) of the Iranian world. This is an opportunity for students whose preparations may be centered on other contiguous periods or regions to consider the manner in which Middle Asia and its rich visual cultures contributed to the forging of Late Antique and medieval/ Islamic visual expressions of kingship, territory and religion. The seminar will consider a range of materials from archaeological sites, rock reliefs and wall paintings to textiles, silver vessels, coins and ceramics, with special attention to materials excavated or otherwise held by the Penn Museum.

ANCH 535 Problems in Greek: Archaic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Kleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solons poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many older questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien.

ANCH 545 Spatial Analysis of the Past
Humans continuously move through, interact with, and modify their spaces, leaving a palimpsest of human activity all around us. The ability for digital methods to deal with larger datasets, at higher accuracies, and at multiple scales, lends itself particularly well to the study of diachronic human-space interaction. In this class, we will examine space at a range of scales from landscapes, to urban settings, to archaeological contexts and architecture. We digitally represent space using a variety of 3d and 2d data types, from models of land surfaces and buildings, to multispectral satellite imagery and urban plans. We will first gain experience creating, gathering, and manipulating spatial datasets in preparation for analysis. We will next practice a variety of analytical techniques on these data and examine case studies that have used spatial methods to draw important archaeological and historical conclusions. Tools covered in this class will include geographical information systems (GIS), global navigation satellite systems (GNSS), raster image processing, photogrammetry, and 3d spatial modeling software. Finally, we will gain experience with the visualization of our data and results, and the presentation of those results through open online publication.

ANCH 604 Provincial Perspectives
Most of the primary sources available to us reflect the ideology, concepts and realities of Hellenistic and Roman imperial rule through the lenses of ruling power and its elites. There are, however, a number of sources that provide insights into how provincials and subjects saw and depicted themselves, the imperial power and their interaction. Historiographical and auto-ethnographic works, orations, philosophical and religious texts reflect different attitudes towards the ruling imperial powers ranging from open hostility and frustrated acceptance to praise and even identification. In this seminar we will focus on how ethnic, religious, cultural and/or regional identities were developed, maintained, adapted and interpreted within and in reaction to the imperial frameworks of the Hellenistic and Roman periods. Texts to be read and discussed include some “canonical” authors such as Polybius and Flavius Josephus as well as some lesser-known works and fragments from authors like Berossus, Manetho, Nicolaus of Damascus, and Poseidonius and will be complemented by documentary, epigraphic and archaeological evidence. Special emphasis will also be laid on modern scholarly approaches, including concepts of identity, hybridization and cultural change and the dynamics of empire in general.

ANCH 616 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his "The Ancient Economy" have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates about ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

ANEL 560 Late Egyptian
Introduction to the grammar of Late Egyptian.
One term course offered either term
Prerequisite: ANEL 460
Activity: Lecture
1 Course Unit

ANEL 561 Middle Egyptian Texts
This course will concentrate on the literary texts of the New Kingdom: Late Egyptian narratives such as THE DOOMED PRINCE, THE TWO BROTHERS, and HOURS AND SETH (Gardiner, LATE EGYPTIAN STORIES) and poetry; (Gardiner, CHESTER BEATTY I and Muller, LIEBESPOESIE). The grammar will be analyzed (Eman, NEUEGYPTISCHE GRAMMATIK and Korostovzev, GRAMMARIE DU NEO-EGYPTIEN) and compared to that used in non-literary texts (Groll, THE NEGATIVE VERBAL SYSTEM OF LATE EGYPTIAN, NON-VERBAL SENTENCE PATTERNS IN LATER EGYPTIAN, AND THE LITERARY AND NON-LITERARY VERBAL SYSTEMS IN LATER EGYPTIAN).
Taught by: Silverman
One term course offered either term
Prerequisite: ANEL 560
Activity: Lecture
1 Course Unit

ANEL 563 Old Egyptian
This course is an introduction to the language of the Egyptian Old Kingdom. The grammar of the period will be introduced during the early part of the semester, using Eded's ALTAGYPTISCHE GRAMMATIK as the basic reference. Other grammatical studies to be utilized will include works by Allen, Baer, Polotsky, Sartzinger, Gilula, Doret, and Silverman. The majorit of time in the course will be devoted to reading varied textual material: the unpublished inscriptions in the tomb of the Old Kingdom official Kapure-on view in the collection of the University Museum; several autobiographical inscriptions as recorded by Sethe in URKUNDEN I; and a letter in hieratic (Baer, ZAS 93, 1966, 1-9).

ANEL 645 The Land of Sumer, Writing, Language, and Culture

This self-contained course sets the Sumerian language, writing system and use of writing in their social and historical context. The aim is to provide students of ancient history and culture from diverse disciplines with a good grounding in Sumerian culture, familiarity with the Sumerian language and cuneiform writing system and the requisite knowledge for critical assessment of published translations and of the secondary literature. The course is organized as two threads, culture on the one hand and language on the other. The two threads are united by taking examples in the language exercises, vocabulary assignments, etc., as far as possible from the domain of the week’s cultural topics. The net effect is to examine the culture both through contemporary secondary literature and through direct contact with elementary primary texts of relevance to the various topics of discussion. The language component of the course will be carried out in a combination of transliteration and cuneiform, with an expectation that all students will gain familiarity with at least the core 80 syllabic signs, and about 100 additional logographic signs.

Taught by: Tinney

ANEL 661 Old Egyptian Texts: Secular

This is the beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 031) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full’ survival in the native-speaking environment.

Taught by: Silverman
One-term course offered either term
Prerequisite: ANEL 563
Activity: Lecture
1 Course Unit

ANEL 664 Coptic

The course will be an introduction to the writing, grammar, and literature of Coptic.

1 Course Unit

Anthropology (ANTH)

ANTH 001 Archaeology, Window to the Human Past

This course will introduce students to the methods and theory of archaeology by exploring how we turn archaeological data into statements about cultural behavior. We will discuss the place of archaeology in the broader field of anthropology and debate issues facing the discipline today. The course will rely on case studies from around the world and from many different time periods to introduce students to the research process, field and lab methods, and essential questions of archaeological anthropology. Students will have the opportunity to work hands-on with archaeological materials through visiting the galleries and working with Penn Museum collections.

For BA Students: History and Tradition Sector
Course usually offered in fall term
Activity: Recitation
1 Course Unit

ANTH 002 Introduction to Cultural Anthropology

An introduction to the anthropological study of human social and cultural diversity throughout the world, with special emphasis on the development of the idea of culture as an analytical concept. The course includes sections on the ethnographic research method and on the library of ethnographic material relating to cultural change in different parts of the world that anthropology has produced since the 19th century.

For BA Students: Society Sector
Course usually offered in fall term
Activity: Recitation
1 Course Unit
**ANTH 003 Introduction to Human Evolution**

How did humans evolve? When did humans start to walk on two legs? How are humans related to non-human primates? This course focuses on the scientific study of human evolution describing the emergence, development, and diversification of our species, Homo sapiens. First we cover the fundamental principles of evolutionary theory and some of the basics of genetics and heredity as they relate to human morphological, physiological, and genetic variation. We then examine what studies of nonhuman primates (monkeys and apes) can reveal about our own evolutionary past, reviewing the behavioral and ecological diversity seen among living primates. We conclude the course examining the "hard" evidence of human evolution - the fossil and material culture record of human history from our earliest primate ancestors to the emergence of modern Homo sapiens. You will also have the opportunity, during recitations, to conduct hands-on exercises collecting and analyzing behavioral, morphological, and genetic data on both humans and nonhuman primates and working with the Department of Anthropology's extensive collection of fossil casts.

For BA Students: Living World Sector
Course usually offered in fall term
Activity: Recitation
1 Course Unit

**ANTH 004 The Modern World and Its Cultural Background**

An introduction to the diversity of cultures in the world. This course is divided into two parts. The first briefly examines different models of understanding human diversity: ethnicities, religions, languages, political forms, economic structures, cultures, and "civilizations". Students will learn to think about the world as an interconnected whole, and know the significance of culture on a global scale. The second part is an introduction to area studies, in which we undertake a survey of the different regions of the world. We conduct the survey paying attention to the different aspects of human diversity, which we examine in the first part of this course. Students will acquire a greater appreciation and understanding of cultural differences in the more comprehensive social context.

For BA Students: Humanities and Social Science S
Course usually offered in spring term
Activity: Recitation
1 Course Unit

**ANTH 005 Great Transformations**

This course explores the history and archaeology of the last 20,000 years from the development of agriculture to the industrial revolution. Why did people across the world abandon foraging for farming? How and why did cities and states develop? Why did societies succeed or fail? How have humans transformed themselves and the natural world, including the landscape and the climate? We will explore the methods that archaeologists use to consider these questions and analyze evidence for social and economic change from the Middle East, the Americas, Asia, Africa, Australia and Europe. In addition, students will have a chance to conduct hands-on exercises with artifacts from the Penn Museum during practicums.

For BA Students: History and Tradition Sector
Course usually offered in spring term
Activity: Lecture
1 Course Unit

**ANTH 012 Globalization And Its Historical Significance**

This course describes and analyzes the current state of globalization and sets it in historical perspective. It applies the concepts and methods of anthropology, history, political economy and sociology to the analysis and interpretation of what is actually happening in the course of the semester that relates to the progress of globalization. We focus on a series of questions not only about what is happening but about the growing awareness of it and the consequences of the increasing awareness. In answering these questions we distinguish between active campaigns to cover the world (e.g. Christian and Muslim proselytism, free-trade agreements, democratization) and the unplanned diffusion of new ways of organizing trade, capital flows, tourism and remote interaction via the Internet. The body of the course deals with particular dimensions of globalization, reviewing both the early and recent history of each. The overall approach is historical and comparative, setting globalization on the larger stage of the economic, political and cultural development of various parts of the modern world. The course is taught collaboratively by an anthropologist, an historian, and a sociologist, offering the opportunity to compare and contrast distinct disciplinary approaches. It seeks to develop a general social-science-based theoretical understanding of the various historical dimensions of globalization: economic, political, social and cultural.

Taught by: Spooner
Course usually offered in fall term
Also Offered As: HIST 012, SOCI 012
Activity: Lecture
1 Course Unit

**ANTH 022 World Music and Cultures**

This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways – particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

Fulfills College Cross Cultural Foundational Requirement.

ANTH 055 Cultural Heritage, Politics and War in the Middle East
Political upheaval in the Middle East has brought cultural heritage studies to the forefront. From playing a role in the making of national identity and economy of Middle Eastern countries to falling prey to armed conflicts, cultural heritage remains an important element of the political and social scene. This seminar will examine the relatedness of cultural heritage to questions of identity and politics in the Middle East, and the impact of recent wars on such heritage. The seminar will start by outlining the ancient and modern history of the Middle East, and reviewing the production of cultural heritage and its contemporary management in several Middle Eastern countries. It will then proceed to discuss the following major topics: 1) Cultural diversity of modern Middle Eastern societies, the perception of cultural heritage in these societies, and the survival of long-living historical places, old traditions, and material culture of all kinds. 2) The influence of ancient cultures on common fixation and beliefs of modern identity in Middle Eastern societies (e.g. particular ethnic and religious group see themselves as direct descendants of one or a number of ancient groups such as Phoenicians, Israelites, Assyrians). 3) The use of archeological and historical data to create narratives of the past that promote specific political ideologies in the modern Middle East and, in some cases fabricate novel cultural and political realities. 4) The damage done to Cultural Heritage by recent wars in Iraq, Syria, and Lebanon, and (i) how these wars are/were the makers of a new time that disrupted the living past through the destruction of cultural landscapes; and (ii) the involvement of cultural heritage institutions and archaeologists in rescuing cultural heritage in the event of war.

ANTH 056 Seeing/Hearing South Africa: Politics and History through Contemporary Performance
This course begins in the regular semester–students are provided a general introduction to South African history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the two week intensive travel to South Africa (either Fall semesterIntro with winter break travel; or spring semesterIntro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites. For fall/winter travel: focus is on Cape Town’s New Year’s Festival performed by those historically called "Cape Coloured" a Festival that makes complicated understandings of race, slavery, and translational translation of borrowed culture.
For the Spring/late spring travel, the destination is music festivals in mid-May. Both classes include visits to Robben island, Kirstenbosch gardens; "Cape Malay" heritage sites; travel to KwaZulu Natal, and to Johannesburg’s apartheid museum, Soweto’s anti apartheid destinations, the Cradle of Humankind works heritage site, a game park, and the Union Buildings in Pretoria. En route we will stop over to view Khoisan rock art.

ANTH 058 Freshman Seminar
This interdisciplinary course introduces students to qualitative research methods and frameworks in the social sciences and humanities. The goals of the semester will be for each student to develop their own research proposal for a specific project that they could imagine pursuing over the summer or later in their undergraduate career and to develop a web-based exhibit of one Penn-based research collection of interest. Students will be introduced to a range of textual, archival and media collections and databases available at Penn, with particular attention to South Asia and other specific regions of interest to course participants. The class will visit the Penn Museum object collections and archives, the Art library, the Kislak Center for Rare Books and Manuscripts, Film Archives, and other special collections on campus, and meet with a representative from the Center for Undergraduate Research Funding (CURF). Students will learn how to frame an effective research question, situate it in relation to existing research, select the most appropriate methods for addressing the question, and develop an effective research plan. Each week students will be introduced to a new set of frameworks for analysis, see specific examples of their application drawn from anthropological, historical, and related scholarship and have opportunities to practice applying and evaluating the strengths and weaknesses of specific methodological tools. Students will also have the opportunity to identify sources of funding for summer research projects and prepare applications for these opportunities as part of the course. The course is ideal as an introduction to both the excellent libraries and research collections housed at Penn, and to a wide range of intellectual frameworks for engaging with these collections - a great way to kick off your undergraduate experience at Penn!

Notes: Topic varies by semester; see subtitle and Professor

ANTH 086 Desire and Demand: Culture and Consumption in the Global Marketplace
Does consumption shape culture or does culture shape consumption? As even the most mundane purchase becomes socially symbolic and culturally meaningful we can persuasively argue that the concept of "need" has been transformed. Analyzing a variety of physical and virtual consumer venues, the goal of this seminar is to understand and to analyze historical and contemporary issues related to a culture of consumption. We investigate social and political-economic factors that impact when and how people purchase goods and argue that behavior attached to consumption includes a nexus of influences that may change periodically in response to external factors. Readings and research assignments are interdisciplinary and require a critical analysis of global/local linkages. The city of Philadelphia becomes the seminar's laboratory as we ask: how have issues of culture, consumption, and global capitalism become intertwined around the world?
Taught by: Diggs-Thompson
One term course offered either term
Activity: Seminar

Notes: Freshman Seminar
ANTH 100 Topics in Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in spring term
Also Offered As: ANTH 654, NELC 281, NELC 681, SAST 161
Activity: Lecture
1 Course Unit

ANTH 104 Sex and Human Nature
This course is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course delves into the development of sexual anatomy and physiology. Among the subjects to be explored are sex determination, the nature of orgasm, and the sexual development of females and males from birth to adulthood. The role of ecology and social life in shaping human mating patterns is also evaluated using ethnographic and cross-cultural materials from a variety of human cultures. In particular, the course examines why humans marry or pair bond, whether there is a biological basis of love, which biological and psychological factors produce jealousy. Finally, the course explores topics relevant to human sexuality today, such as the "hook-up culture", contraception and abortion, sex work, sexual transmitted diseases, and the ethical and legal dimensions of human sexuality.
For BA Students: Living World Sector
Taught by: Schurr
Course not offered every year
Also Offered As: BIBB 150, GSWS 103
Activity: Lecture
1 Course Unit

ANTH 105 Human Adaptation
This course concerns evolutionary processes using humans (Homo sapiens) as a case study. Through a study of the anatomical, genetic, and behavioral adaptations in our species, we will explain and explore our biology through mammalian, primate, and hominid evolutionary histories. Through evolutionary theory, we explore why humans are imperfectly adapted and not an end product of evolutionary change, and how we create and modify, not just respond to, evolutionary pressures. Through this approach, we gain insights into how and why our biology functions (and sometimes malfunctions) in the way that it does. Then, we will explore topics including human birth, growth, locomotion, reproduction, and diet as part of human biocultural adaptation. This course will involve the analysis of hominid fossil casts and human skeletal material from the Penn Museum Physical Anthropology section.
Taught by: Mitchell
Course not offered every year
Activity: Lecture
1 Course Unit

ANTH 110 Water in the Middle East Throughout History
The role of water in the Middle East cannot be overstated. The Middle East is an arid region, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. The location, accessibility, yield, and quality of natural and managed water resources significantly influenced the location and longevity of ancient and modern settlements. Control of water has always affected the economic, political, social life of the communities inhabiting these settlements. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years. It will consider water in river valleys, deserts, highland zones, steppe, and coastal areas of Mesopotamia, Egypt, the Levant, and Arabia from environmental, political, social, cultural, and technical perspectives. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps. We will examine irrigation, water supply, sanitation, and water-driven power systems known from ethnographic studies and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the earliest cities arose, and present and potential future water crises and "water wars." In our final weeks, we will discuss archaeology and historical anthropology's contribution to conceptions of water "sustainability" and examine attempts to revive traditional and ancient technologies in an effort to better manage modern water resources.

ANTH 111 Introduction to Mediterranean Archaeology
The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden huts, from the Aphrodite of Knidos to the bones of a fisherman named Peter.

ANTH 112 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what's in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We'll start with classical and contemporary theories on the relationship of religion to stuff. We'll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We'll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

One term course offered either term
Also Offered As: ARTH 339, RELS 102
Activity: Seminar
1 Course Unit
ANTH 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region's long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 116, AFRC 629, LALS 116
Activity: Lecture
1 Course Unit

ANTH 118 Witchcraft & Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property— lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

ANTH 121 Origin and Cultures of Cities
The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.

Course usually offered in fall term
Also Offered As: NELC 103, URBS 121
Activity: Lecture
1 Course Unit

ANTH 122 Becoming Human
Human evolutionary studies is a composite product of the fieldwork of both Paleolithic archaeology and human paleontology (or what we refer to as "stones and bones"). This marriage of two subdisciplines of anthropology produces a unique set of data that is intellectually managed and driven by theories within anthropology as a whole and even beyond — to fields such as biology, psychology, and primate ethology, as we try to understand the origins of language, culture, and our unique physical characteristics. In this course, we will jointly discuss and debate the actual evidence of human evolution, describing what the actual evidence is and exploring how far can we take these interpretations.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1 Course Unit

ANTH 123 Communication & Culture
The course looks at varieties of human expression — such as art, film, language and song — as communicative practices that connect persons together to form a common culture. Discussion is centered around particular case studies and ethnographic examples. Examination of communicative practices in terms of the types of expressive signs they employ, their capacity to formulate and transmit cultural beliefs and ideals (such as conceptions of politics, nature, and self), and to define the size and characteristics of groups and communities sharing such ideals. Discussion of the role of media, social institutions, and technologies of communication (print, electronic). Emphasis on contemporary communicative practices and the forms of culture that emerge in the modern world.
For BA Students: Society Sector
Taught by: Agha
One-term course offered either term
Activity: Recitation
1 Course Unit

ANTH 124 Archaeology & The Bible
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

Course not offered every year
Also Offered As: JWST 124, NELC 155, RELS 024
Activity: Lecture
1 Course Unit
ANTH 127 The Material Past in a Digital World
The material remains of the human past—objects and spaces—provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

Also Offered As: ARTH 127, CLST 127, HIST 127, NELC 187
Activity: Lecture
1 Course Unit

ANTH 139 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.

For BA Students: History and Tradition Sector

1 Course Unit

ANTH 141 Public Policy, Museums, and the Ethics of Cultural Heritage
This course will focus upon and examine the ethics of international heritage and the role that Museums play in the preservation of identity and cultural heritage. The mission of this course will be to inform and educate students about the role of Museums within the 21st century. What is the role and position of antiquities and important cultural objects in Museums? How should Museums acquire these objects and when should they be returned to countries and cultural groups? Examples from current issues will be included in the reading and discussions along with objects and issues within the Penn Museum.

Activity: Lecture
1 Course Unit

ANTH 143 Being Human: Biology, Culture & Human Diversity
This course will investigate human biology from evolutionary and biocultural perspectives. Using this approach, the class will explore what it means to be human. We will examine humans as mammals, as primates, and as hominins (our own lineage). We will also study the basics of human genetics, growth and development, immune function, nutrition, life history, and adaptations to diet and disease. In addition, we will review biological variation in contemporary and past societies and the evolutionary processes that helped to shape them.

Taught by: Schurr
One term course offered either term
Activity: Lecture
1 Course Unit
ANTH 148 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum's Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum's collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

Activity: Lecture
1 Course Unit

ANTH 149 Introduction to Native American and Indigenous Studies
This course offers a broad introduction to the linked fields of Native American Studies and Indigenous Studies. Students will gain foundational understandings of the ways that Indigenous peoples and academic researchers engage with Indigenous knowledges in diverse worldwide settings, while also exploring the impacts of settler colonialism and the influence of recent decolonizing methodologies. Students will examine topics from a variety of disciplinary traditions, using historical texts, anthropological studies, oral literature, and modern media. Special case studies will focus on: links between oral traditions and archaeological research; relations among archives, museum representation, and Indigenous heritage; legal interventions and protections for Indigenous sovereignty; and language restoration and cultural recovery.
Taught by: M. Bruchac
Activity: Seminar
1 Course Unit

ANTH 151 Archaeology of American History: The Colonial Period
Over the last fifty years archaeologists have been exploring historic sites in the United States dating from both the Colonial Period and the 19th/20th centuries. What can archaeology now tell us about the origins of American society, the invasion of North America by various European peoples (Spanish, English, Dutch), the impact on native peoples, the rise of African American and Asian American cultures, major crisis (e.g. the revolution, Civil War, and the Great Depression), the settlement of the Far American West, and the final emergence of a truly national culture in the 20th century? A basic question will be how an American history based on both archaeology and archival sources is different and more complete than an image of the past drawn only from written sources.

Activity: Seminar
1 Course Unit

ANTH 154 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth's systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram's Garden. Field trips by boat on the Schuykill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region's vast tidal marshlands and wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, drawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

1 Course Unit
Notes: Freshman Seminar
ANTH 158 The Neolithic Revolution
The advent of food production/agriculture in prehistory, sometimes referred to as the "Neolithic Revolution," represents key economic, social, and biological transitions for human groups. Food production was characterized by the possibility for the accumulation of food surpluses, which could be used as a form of wealth. It also resulted in the reorganization of social and ritual life as people settled more permanently in villages or were involved in pastoral lifeways. Additionally, densely packed living conditions and a close association with domesticated animals led to the spread of diseases, and new forms of labor related to farming tasks, as well as diets focused on a narrower range of foods, created biological stresses in these populations. This course examines several examples of the "Neolithic Revolution" throughout the world, including the Middle East, China, Europe, Mesoamerica, South America, and the North American Southwest.

ANTH 159 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.

ANTH 169 Merchants, Saints, Slaves and Sojourners: the Worlds of the Indian Ocean
Do oceans serve to divide and demarcate distinct cultures and regions? Or do they facilitate exchange, connection and cosmopolitanism? This course will explore the manner in which the Indian Ocean has played both roles throughout history, and how the nature of those divisions and connections has changed over time from the ancient to the modern world. We will reconstruct the intertwined mercantile, religious and kinship networks that spanned the Indian Ocean world, across the Middle East, East Africa, South Asia, Southeast Asia and China, illuminating the histories of Hinduism, Buddhism and Islam, while also considering the role of successive imperial political formations, from Rome to Britain. Throughout the semester we will seek to understand the Indian Ocean through the people who lived and worked in its milieu - from consuls and military commanders, to traders, brokers, sailors, prisoners and slaves. Course materials will draw on a variety of disciplines (anthropology, archaeology, material culture, religious studies) to construct the cultural, economic, and environmental history of the Indian Ocean.

1 Course Unit

ANTH 190 Introduction to Africa
This course provides an introduction to the study of Africa in all its diversity and complexity. Our focus is cultural, geographical, and historical: we will seek to understand Africa's current place in the world political and economic order and learn about the various social and physical factors that have influenced the historical trajectory of the continent. We study the cultural formations and empires that emerged in Africa before European colonial invasion and then how colonialism reshaped those sociocultural forms. We'll learn about the unique kinds of kinship and religion in precolonial Africa and the changes brought about by the spread of Islam and Christianity. Finally, we'll take a close look at contemporary issues such as ethnic violence, migration, popular culture and poverty, and we'll debate the various approaches to understanding those issues.

ANTH 199 Independent Study in Anthropology
A study under faculty supervision of a problem area or topic not included in the formal curriculum.
One-term course offered either term
Prerequisites: Junior or senior standing and written permission of instructor and undergraduate chair
Activity; Independent Study
1 Course Unit
Notes: See Department for Advisor
ANTH 202 Language, Migration, Diaspora
Centering on the relation between language, migration, and diaspora, this course uses linguistic anthropological approaches to understand how the "very big" is reflected in the "very small." We will approach language use as a process that unfolds in the microclimate of everyday interaction, but whose effects extend to and shape large-scale social processes. We will ask a number of interrelated questions: How does language use shape global phenomena like transnational and diasporic populations? How do globalizing forces impact and shape language structure and use? How are mobility and (im)migration enabled or constrained through everyday communicative interaction? We begin by exploring the ideologies inherent in everyday speech, evaluating how language is linked to social identities like class, race, gender, and sexuality, and to social personae like "the migrant," "the refugee," "the foreigner," or to the "diasporic subject" more generally. We then explore the cultural politics of languages in and across nation-states, attending to their uses and values in unprecedented global flows of information, goods, and people.
Taught by: Carruthers
Course not offered every year
Activity: Lecture
1 Course Unit

ANTH 204 Theoretical Foundations
Ever wonder what the point was of reading the "founding fathers" of the discipline (and yes, they were most often fathers)? Ever feel like the "old stuff" and the "old questions" have no relevance to your contemporary interests? This course, designed primarily for cultural anthropology majors, will provide clues. This is NOT a comprehensive history of the discipline. Instead, we will examine some of the main issues that have been foundational to anthropology, and we will explore how approaches to these issues have changed over time. To do so, we will contextualize our analysis of transformations in anthropological knowledge production within historical and contemporary political economies. By exploring core issues that continue to inspire and inform anthropological theory and ethnographic practice, we will solidify our commitment to a holistic and relational understanding of social processes.
Course not offered every year
Prerequisite: Students should have completed at least one anthropology course before registering for ANTH 204
Activity: Seminar
1 Course Unit

ANTH 205 American Folklore
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore, body art and adornment, contemporary (urban) legends and beliefs, public celebrations and rituals, and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: FOLK 201
Activity: Recitation
1 Course Unit

ANTH 210 Death: Anthropological Perspectives
This course will cover the topic of DEATH from a bio/cultural perspective including the evolution of life history (aging and demography - mortality) as well as from an archaeological perspective (prehistory) and early history of mortuary practices. Nothing in the lifespan of humans is so revealing on the interface of culture and biology as is death and the experience of death. This course is not concerned specifically with how an individual experiences death, but in the ways that culture and biology have come to define and deal with physical death and the death experience.
Taught by: Monge
Course not offered every year
Activity: Lecture
1 Course Unit

ANTH 211 Religion and Ecology
This class will introduce the overlaps between religion and ecology. Rather than assuming that there is a necessary positive or negative relationship between religion and ecology, we will look at how these relationships have materialized in complicated ways at different moments in history. We'll consider perspectives and case studies from a range of different moments in history. We'll consider perspectives and case studies from a range of different traditions, with a special attention paid to the genesis of the field of Religion and Ecology in critiques of Christian attitudes toward the environment in the 1960s and 1970s.
Taught by: Covey
Course not offered every year

Activity: Lecture
1 Course Unit

ANTH 219 Archaeology Field Project
First-hand participation in research project in historical archaeology in Southern New Jersey. Transportation provided by the university. Students will assist in excavations and archival research on local archaeological sites. Class is open to all undergraduates, no previous archaeological experience is required. Attendance will involve Fridays or Saturdays, all day from 8:00 to 5:00 including travel time to the excavations and back to the University Museum. Students enroll for only one day (F or S). Enrollment is limited so specific permission of the instructor is required (Robert L. Schuyler: schuyler@sas.upenn.edu; (215)898-6965; U Museum 412). A follow up laboratory course (Anth 220 in the spring semester) will also be available during which the artifacts and documentary sources collected in the fall will be analyzed at the University Museum. Course may be repeated for credit.

ANTH 221 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.
Taught by: Boileau/Dibble/Jansen
Course not offered every year

ANTH 236 Iraq: Ancient Cities & Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.
Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 636, NELC 241, NELC 641, URBS 236
Activity: Lecture
1 Course Unit

ANTH 238 Introduction to Medical Anthropology
Introduction to Medical Anthropology takes central concepts in anthropology – culture, adaptation, human variation, belief, political economy, the body – and applies them to human health and illness. Students explore key elements of healing systems including healing technologies and healer-patient relationships. Modern day applications for medical anthropology are stressed.

Course usually offered in fall term
Also Offered As: HSOC 238
Activity: Lecture
1 Course Unit

ANTH 241 Performing History
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processions, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternately into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper’s main thesis. I will say more about these assignments as they approach.
Also Offered As: HIST 241
Activity: Seminar
1 Course Unit
**ANTH 244 Disease and Human Evolution**
This course will explore the role played by disease in human evolution, from the emergence of the human lineage to the present day. We will evaluate both infectious and non-infectious diseases and examine the way in which populations and disease organisms have co-evolved. Related issues to be explored include the nature of the virulence and pathogenicity of infectious agents, and the impact of vaccination on pathogen evolution. In addition, we will discuss the epidemiological transition and the rise of complex diseases of modernization (e.g., diabetes, cancer) that has occurred in the past several centuries. Overall, the course will provide a broader understanding of the influence of disease processes on the evolution of the human species.
Taught by: Schurr
Course not offered every year
Activity: Lecture
1 Course Unit

**ANTH 246 Molecular Anthropology**
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological questions concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations; Neanderthal and Denisovan admixture with modern humans, biogeography of skin color, and physiological, phenotypic and disease adaptations.
Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 649
Prerequisites: ANTH 003, Intro to Human Evolution; some background in biology and genetics will also be useful.
Activity: Seminar
1 Course Unit

**ANTH 248 Food and Feasting: Archaeology of the Table**
Food satisfies human needs on many levels. ANTH 248 explores the importance of food in human experience, starting with the nutritional and ecological aspects of food choice and going on to focus on the social and ritual significance of foods and feasts. Particular attention will be paid to the way that archaeologists and biological anthropologists find out about food use in the past. Contemporary observations about the central significance of eating as a social activity will be linked to the development of cuisines, economies, and civilizations in ancient times. The course will use lectures, discussions, films, food tastings, and fieldwork to explore the course themes.
Taught by: Moore
Course not offered every year
Activity: Lecture
1 Course Unit

**ANTH 249 Evolutionary Medicine**
Evolutionary medicine is the application of modern evolutionary theory to studies of health and disease in humans. In taking this approach, the course will explore the role that disease played in human evolution. We will examine both infectious and non-infectious diseases, and assess the way in which populations and disease organisms have co-evolved. Related issues to be examined are the nature of the virulence and pathogenicity of infectious agents, and their efforts to subvert the immune system's responses to infection. We will also explore the evolved responses that enable individuals to protect, heal and recuperate themselves from infections and injuries, such as fever and sickness behavior, and the fitness enhancing aspects of these processes. Finally, we will study how past adaptations of early humans to their environments now affects modern humans, who have very different diets, life expectancy, activity patterns, and hygiene than their ancestors.
Taught by: Schurr
Course not offered every year
Prerequisites: ANTH 003 and ANTH 143 (or permission for undergraduates)
Activity: Seminar
1 Course Unit

**ANTH 253 Violence, Tolerance, Freedom**
This seminar examines how the adjective "religious" has been used to modify the nouns "violence," "tolerance," and "freedom." It traces the historical development of liberal ideas of tolerance and human rights, interrogates the common assumption that religion exerts a perverse influence on politics and vice versa, critically examines the concept of terrorism, and connects the neoliberal ideal of unfettered free markets to the idea of being "spiritual but not religious."
Taught by: Jolyon Thomas
Also Offered As: RELS 254
Activity: Seminar
1 Course Unit

**ANTH 254 Archaeology of the Inca**
The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, ceque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.
For BA Students: History and Tradition Sector

Course not offered every year
Also Offered As: LALS 254
Activity: Seminar
1 Course Unit
ANTH 255 Modern Southeast Asia
This freshman-friendly course provides a broad introductory overview of modern Southeast Asia, surveying the region’s extraordinary diversity and ongoing social, economic, and political transformations. Centering on the nation-states that have emerged following the second World War, we will assess elements of Southeast Asian geography, history, language and literature, cosmologies, kinship systems, music, art and architecture, agriculture, industrialization and urbanization, politics, and economic change. We will remain particularly attentive to the ways Southeast Asians negotiate and contend with ongoing challenges with modernization, development, and globalization.
Taught by: Carruthers
Activity: Lecture
1 Course Unit

ANTH 258 Visualizing the Past/Peopling the Past
This highly interdisciplinary course approaches fundamental issues in Anthropology and Computer Science. Using an anthropological perspective, this course focuses on the history, theory, and methods of how archaeology and visualizations of the past are created, presented and used in scholarly media (e.g., traditional publications, conference papers, and project databases), and popular culture (e.g., artists reconstructions, movies, TV documentaries, museum exhibits, games, the internet, and art), and contemporary computer technology (e.g., 3D modeling, Animation, virtual reality, and simulation). From the computer science perspective, the challenge becomes how we can transform known and often incomplete information into engaging and plausible digital models of a past culture and its people. Students gain acquisition of fundamental computer programming, data analysis, and 3D modeling and animation tools. The course material is broad and requires conceptual integration by the student. The instructors use the SEAS Open Learning Classroom for programming and the Penn Museum to explore artifact collections through Object-Based Learning and evaluate public exhibits and complete an original Final Project to people and visualize the past.
Taught by: Badler/Erickson
Course not offered every year
Also Offered As: CIS 106
Activity: Lecture
1 Course Unit

ANTH 260 Cultures of Science and Technology
Science and technology figure centrally in the economic, political, and socio-cultural changes that impact our world. Happenings in the life sciences, including the discovery of new genes, pathways, and processes, are re-drawing concepts of the body and human nature and refiguring social and political relations. The seminar starts from the premise that scientific facts are made, not things existing a priori in the world and that are merely picked up by researchers and consumed by lay audiences. Likewise, technologies are created through a process of intense negotiation between producers and their sophisticated users. Focusing on the biosciences, we explore the production of science and technology and how they 1) affect individuals, self-identities, subjectivity, kinship, and social relationships; 2) have interacted with or reinforced political programs, racial classifications, unequal access to knowledge, and patterns of social injustice; 3) inform contemporary institutional structures, strategies of governance, and practices of citizenship.
We will combine methods and perspectives from social and cultural anthropology, and the social studies of science and technology, and will draw from historical case studies, contemporary ethnographies of science, scientific and medical journals, documentary films and media reports.
Taught by: Petryna
Course not offered every year
Also Offered As: STSC 268
Activity: Seminar
1 Course Unit

ANTH 267 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: White, Monge, Moore
Course not offered every year
Also Offered As: ANTH 567, CLST 268, CLST 568, NELC 286, NELC 586
Activity: Lecture
1 Course Unit

ANTH 268 Anthropology of Museums
This course examines museums as sites where issues of Indigenous identity, memory, place and power intersect. Museums have long been engaged in the selective preservation, representation, and contextualization of Indigenous objects, cultures, and histories. We will examine antiquarian impulses that inspired the collecting of curiosities, scientific studies that drove the collection of biological specimens, and nationalist ideals that shaped monuments to house imperialist memories. Museums are now sites for complex, often contentious discourse around Indigenous collections. Students will review histories of local and national collecting processes, with a particular focus on Native American collections and concerns. We will also consider how Indigenous curators and new kinds of museums have developed innovative displays and interpretations.
Taught by: Bruchac
Activity: Seminar
1 Course Unit
ANTH 271 Ancient Mexico and Central America
This course will provide an overview of the diverse cultures of ancient Mesoamerica. Across the landscape that is now Mexico and Central America, the societies that inhabited highlands and tropical lowlands developed agricultural lands, built towering pyramids and cities, and forged great civilizations all before the arrival of Europeans to the New World. In this this course, students will learn about these diverse civilizations and the many similarities and continuities among them. They will also learn about the legacy left by these cultures on today’s modern peoples of Central Mexico and Central America.
Course not offered every year
Also Offered As: LALS 272
Activity: Lecture
1 Course Unit

ANTH 273 Global Health: Anthropological Perspectives
In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors – which are increasingly global in nature – influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalizing processes.
Taught by: Petryna
One-term course offered either term
Also Offered As: HSOC 239
Activity: Seminar
1 Course Unit

ANTH 276 Ethnographic Approaches to Urban Athletics and Human Movement
Rooted in the rubric of public interest social science, the course focuses on bridging theory and practice motivated by a commitment to social justice through original ethnographic research. In particular, this course will focus on kinesiology and the anthropology of sports and well-being through intense analysis of the Young Quakers Community Athletics (YQCA) program, a collaboration between the Netter Center for Community Partnerships and Penn Athletics. In guest lectures from multiple disciplines will help to round out the course. The core learning objective is to bring a broad range of specialized expertise to foster a holistic examination of a complex institutional partnership intended to promote positive social transformation and improved human health and well-being.
Taught by: Frank Johnston, Gretchen Suess
Activity: Seminar
1 Course Unit

ANTH 294 Cities of the Future: Urbanization in the Global South
This course examines the futures of urbanization in most of the world. With cities in "developing" countries set to absorb 95% of urban population growth in the next generation, the course explores the plans, spaces and social experiences of this dramatic urban century. How do proliferating urban populations sustain themselves in the cities of Latin America, Africa and Asia? What kinds of social and political claims do these populations make more just and sustainable cities? The course investigates the ongoing experiences in urban planning, infrastructure development and environmental governance in cities of the Global South. In so doing, it imagines new forms of citizenship, development and sustainability that are currently unfolding in these cities of the future.

Course not offered every year
Also Offered As: URBS 294
Activity: Seminar
1 Course Unit

ANTH 300 Research Seminar in Anthropology
ANTH 300 is a Research Seminar for anthropology majors. It defines the Penn anthropology major by bringing together and interrelating major threads from the different subfields of the Penn anthropology curriculum. Each session includes contributions from members of the standing faculty and seminar discussions of a research theme in which anthropological knowledge is currently progressing.
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: Open to junior and senior anthropology majors

ANTH 301 Senior Thesis
Individual research under faculty supervision culminating in a thesis.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Permit required

ANTH 303 Research Methods in Cultural Anthropology
This undergraduate seminar is about how ethnographers do research. It introduces fundamental concepts and techniques - research design, participant observation, interviews, questionnaires, field notes, archives, data collection and analysis. It also addresses ethical and legal issues - cultural protocols, intellectual property rights, collaborative anthropology, and institutional review boards. Students will conduct original ethnographic research in partnership with the Netter Center.
Course not offered every year
Activity: Seminar
1 Course Unit
ANTH 305 Anthropology and Policy: History, Theory, Practice
From the inception of the discipline, anthropologists have applied their ethnographic and theoretical knowledge to policy issues concerning the alleviation of practical human problems. This approach has not only benefited peoples in need but has also enriched the discipline, providing anthropologists with the opportunity to develop new theories and methodologies from a problem-centered approach. The class will examine the connection between anthropology and policy, theory and practice (or 'praxis'), research and application. We will study these connections by reading about historical and current projects. As an ABCS course, students will also volunteer in a volunteer organization of their choice in the Philadelphia area, conducting anthropological research on the organization, and suggest ways that the anthropological approach might support the efforts of the organization.
Course not offered every year
Also Offered As: ANTH 609
Activity: Seminar
1 Course Unit

ANTH 307 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity, homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.
Taught by: Bruchac
Course not offered every year
Also Offered As: ANTH 607
Activity: Lecture
1 Course Unit

ANTH 308 Ethnohistory of the Native Northeast
Ethnohistory is a multi-disciplinary form of ethnographic study and documentary research that employs both anthropological and historical approaches. This course examines the foundations of the ethnohistorical method as a means to interpret cross-cultural colonial interactions and conflicts, and to better understand the complex histories of Native American Indian peoples from Pennsylvania and northward and eastward. Students will develop skills and strategies for interpreting and contextualizing primary and secondary source materials, oral traditions, colonial records, historical maps, and material culture. Hands-on study will include visits to local archives and historical sites to view relevant documents and landscapes.
Taught by: Bruchac
Course not offered every year
Activity: Seminar
1 Course Unit

ANTH 309 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as "Second Life"), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Urban/Blum
Course not offered every year
Also Offered As: ANTH 519
Activity: Seminar
1 Course Unit

ANTH 317 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, ‘nature’ came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.
Taught by: Lyons
One term course offered either term
Also Offered As: LALS 317
Activity: Seminar
1 Course Unit

ANTH 319 Pottery and Archaeology
Pottery is the most ubiquitous material recovered from most archaeological sites of the last 10,000 years; all archaeologists must be capable of working with it. This course presents the basics on the recovery, documentation, and analysis of archaeological pottery. Instruction includes treatment of pottery in the field, museum, and laboratory. Students will develop critical awareness of the potentials and problems of interpreting pottery within the wider social contexts of production, exchange and consumption. This course will foster an appreciation of the range and complexity of pottery studies and encourage students to understand the materials and technological processes used in the manufacture of pottery.
Taught by: Boileau
Course not offered every year
Also Offered As: CLST 309
Activity: Seminar
1 Course Unit
ANTH 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 323, NELC 323
Activity: Seminar
1 Course Unit

ANTH 328 Performing Culture, Native American Arts
This course analyzes cultural performances as sites for the formation, expression, and transmission of social identity. Students will read ethnographies, critiques, and reports of performance genres including ritual, theater, music, dance, art, and spoken word, with a particular focus on Native American and Indigenous arts and expressions. Topics include: expressive culture as survivance; debates around authenticity and invented traditions; public identity and sexuality; political resistance; the effects of globalization; transnationalism and hybridity; cultural appropriation; and the transformation of folk performances in the wake of modern media.
Taught by: Bruchac
One-term course offered either term
Activity: Lecture
1 Course Unit

ANTH 329 Psychoanalytic and Anthropological Perspectives on Childhood
This course will consider the interaction between culture and individual psychology, and between nature and nurture from birth to adulthood. Through thorough examination of phases of human development described by psychoanalysis, and evidence concerning psychoanalytic ideas from around the world, we will consider questions such as: How do people become who they are, both similar to others and uniquely individual? How do we develop emotionally? What features are and are not universal for our species? What is and is not known about these questions. The instructors are both psychoanalysts, one a psychiatrist, one a pediatrician. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Blum/Shapiro
Course not offered every year
Also Offered As: ANTH 529
Activity: Seminar
1 Course Unit

ANTH 332 Medicine and the Language of Pain
Pain can be a particularly complex and morally charged object of biomedicine. The interiority of pain—deeply private nature of pain experience—complicates its communication. Pain, particularly its chronic form, defies purely biological explanation, troubling fundamental biomedical distinctions between mind and body, subject and object. And decisions about analgesia are fraught, as doctors and patients pursue relief from pain amidst a widespread epidemic of opiate abuse that infuses their interaction with concerns about addiction, drug seeking, culpability, and responsibility. This seminar seeks to shed light on these issues by using concepts from linguistic and medical anthropology to explore how we experience, think about, and talk about pain. As an interdisciplinary endeavor, the course is of relevance not only to anthropology but also to medical sociology, medical ethics, public health, health policy, and science and technology studies.
Taught by: Justin Clapp
Course not offered every year
Activity: Seminar
1 Course Unit

ANTH 334 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to "write women's worlds", but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 334, AFRC 634, ANTH 634, GSWS 334, GSWS 634
Prerequisites: Should have some fundamental knowledge of Cultural Anthropology.
Activity: Seminar
1 Course Unit
ANTH 337 Applying Anthropology Methods in Policy and Practice
This course will introduce students to applied anthropology methods for doing research that can change policy and practices. Examples of policy and practice change include clinical practices in health care settings, social welfare policy, and legal advocacy. Students will be trained in multiple anthropology research methods, including brief participant-observation, presentation of self in the field, entering the field in diverse cultural environments, qualitative interviewing, life story interviewing, and ethnographic content analysis of textual material. Students will also learn how to use NVivo software for analyzing qualitative and some quantitative data from their field notes, interviews, and analysis of popular articles/websites. Finally, students will practice writing products for non-academic audiences, such as policymakers, the media, and the general public. The course will emphasize using anthropology research methods to address real-world problems in policy and practice in diverse cultural contexts. This course is a service learning class affiliated with the Netter Center and a Benjamin Franklin Scholars course.
Taught by: Sahota
Activity: Seminar
1 Course Unit

ANTH 342 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it over time, such as socio-economic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.
Taught by: Ali-Dinar
Course usually offered in spring term
Also Offered As: AFRC 324, ARTH 324
Activity: Lecture
1 Course Unit

ANTH 346 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Also Offered As: NELC 346, NELC 646
Activity: Lecture
1 Course Unit

ANTH 347 Anthropology of Corporations
Modern business corporations can be characterized as having their own internal cultures, more or less distinct from one another. They also exist within encompassing cultures and cultural flows. At the same time, corporations are producers and disseminators, and thus have effects on their surrounding environments, effects that extend from the local to the global. This course examines modern corporations from these three perspectives through theoretical and ethnographic readings, guest speakers from the corporate world, and independent research conducted by the students. Course requirements include student presentations of their research and readings; one or more take-home exams; and a final research paper.
One-term course offered either term
Activity: Seminar
1 Course Unit

ANTH 359 Nutritional Anthropology
This course will explore the significance as it relates to food behaviors and nutritional status in contemporary human populations. The topics covered will be examined from a biocultural perspective and include 1) definition and functions of nutrients and how different cultures perceive nutrients, 2) basic principles of human growth and development, 3) methods to assess dietary intake, 4) food taboos, 5) feeding practices of infants and children, 6) food marketing, 7) causes and consequences of under- and over-nutrition, and 8) food insecurity and hunger.
Course not offered every year
Also Offered As: HSOC 359, URBS 359
Activity: Seminar
1 Course Unit
ANTH 362 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracy on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: PETER COBB
Also Offered As: AAWM 562, ANTH 562, CLST 362, CLST 562, NELC 362
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1 Course Unit

ANTH 375 Quantitative Analysis of Anthropological Data
Taught by: Dibble
One term course offered either term
Also Offered As: ANTH 575
Activity: Lecture
1 Course Unit

ANTH 386 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other "global cities" are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshore production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of gentrification, urbanization, and globalization.
Taught by: Diggs-Thompson
Also Offered As: ANTH 586
Activity: Seminar
1 Course Unit

ANTH 391 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according the Fellow’s area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses
Taught by: Varied
One term course offered either term
Activity: Seminar
1 Course Unit

ANTH 402 Applied Research Skills in Global Community Health
While political borders remain, social and human borders fall with the increasing movement of people, ideas, and resources across geographies. What is global becomes local. While biomedical and counting sciences advance, the human experience and influence remain core to understanding behavior, beliefs, and awareness. What is human remains paramount. The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The Cobbs Creek neighborhood in West Philadelphia is also facing epidemics of non-comunicable diseases. In this context, Applied Skills in Global Community Health will provide academic and professional skills development in comparing the role of culture, history and politics in the health of a population in transition (demographic, nutritional, epidemiologic, economic) in both settings. Classroom work will occur in the spring of each year combined with a short (1 wk) field experience in the Western Highlands of Guatemala. In addition students will examine health and community research in the Cobbs Creek neighborhood of West Philadelphia. Students may substitute 10 week field work as part of the companion course ANTH 403 for the 1 week experience.
Taught by: Barg/Bream
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ANTH 403 Field Experience in Global Community Health
The Maya Western Highlands of Guatemala are undergoing health changes (trauma, maternal-infant health, diabetes, mental health) through economic development and continued human migration to and from the US. The communities of Santiago Atitlan, Solola, San Juan Sacatepequez, and Coatepeque have community based infrastructures (public health clinics, private NGOs, and research projects) that work to address these health changes. In this context, the Field Experience in Global Community Health will provide applied academic and professional skills development in data collection, analysis, and reporting. Field work will occur in the summer of each year combined with a campus based skills development experience.
Taught by: Barg/Bream
Course usually offered in fall term
Activity: Independent Study
0.5 Course Units
ANTH 404 Introduction to the Human Skeleton
An introduction to the anatomy and biology of the human skeleton. Laboratory work will be supplemented by lectures and demonstrations on the development structure, function, and evolution of the human skeleton.
Taught by: Monge
Course not offered every year
Activity: Lecture
1 Course Unit

ANTH 407 Human Evolution
An examination of fossils and other evidence documenting human evolution. Lectures and readings are supplemented with slide and fossil reproduction materials.
Course not offered every year
Prerequisite: ANTH 003
Activity: Lecture
1 Course Unit

ANTH 415 Archaeology of Animals
This course introduces the study of animal bones from archaeological sites. Faunal analysis is an interdisciplinary science which draws methods from archaeology, biology, and paleontology. Bones, shells, and other remains yield evidence for the use of animals by humans, and evidence for the biology of animals and for past environments. The course will focus on research approaches to important transitions in human-animal relationships: the development of human hunting and fishing, animal domestication, early pastoralism, and the emergence of market economies in animal products. Class presentations will include lectures and discussion concerning research design and archaeological case material, with additional videos, slide work with field and laboratory equipment, and supervised work identifying and describing archaeological materials from the University Museum's collections. This class is taught in the Zooarchaeology Laboratory of the Center for the Analysis of Archaeological Materials.
Taught by: Moore
Course not offered every year
Prerequisites: ANTH 001 or permission from instructor.
Activity: Lecture
1 Course Unit

ANTH 419 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum's collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials.
Taught by: Jansen
One-term course offered either term
Also Offered As: CLST 419, NELC 419
Activity: Seminar
1 Course Unit

ANTH 429 Anthropology of the Environment
This seminar draws from social scientific and scientific literatures to explore current themes in the anthropology of the environment. We will investigate the links between climate change science and social science, and the ways in which anthropologists can contribute via in-depth fieldwork methodology and long engagement in issues of society-environment interactions. We will also explore how potential environmental, social, and biological impacts of global warming on the future are being assessed through conceptual paradigms linked to risk, probability, scenario forecasting, tipping points, planetary boundaries, and extinction.
Taught by: Petryna
Activity: Seminar
1 Course Unit

ANTH 433 Andean Archaeology
Consideration of the culture history of the native peoples of the Andean area, with emphasis on the pre-conquest archaeology of the Central Andean region.
Taught by: Erickson
Course not offered every year
Also Offered As: LALS 433
Activity: Lecture
1 Course Unit

ANTH 440 Plants and Society
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce students to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine; and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum’s collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.
Taught by: WHITE
Course not offered every year
Also Offered As: CLST 441
Activity: Seminar
1 Course Unit

ANTH 441 Cross Cultural Approaches to Health and Illness
This course will explore the ways that health and illness related beliefs and behaviors develop within communities. We will identify the forces that shape these beliefs and behaviors and ultimately affect who gets sick, who gets well, and the very nature of the illness experience. Emphasis will be given to the relationships among sociocultural, political and biological factors and the ways that these factors interact to produce the variation that we see in health and illness related attitudes, behaviors and outcomes across cultures.
Course not offered every year
Also Offered As: HSOC 441
Activity: Seminar
1 Course Unit
ANTH 444 Human Growth and Development
In this course we will examine key issues and the processes involved in human growth and development. By their very nature, growth and development are biocultural processes that require an integrated analysis of social construction and biological phenomena. As such, we will incorporate insight from evolutionary theory, ecology, developmental biology, psychology, human biology, and cultural anthropology in our study of growth and development. Such an integrated perspective will help students to see that development is not just a biological unfolding from birth through adolescence and adulthood. Rather, development is best understood as a process that is deeply intertwined with the environment within which the organism develops. Additionally, we will apply these biocultural and socio-ecological insights to emerging health challenges associated with various developmental stages. The study of human growth and development is useful to all students in biological, health-related, and social sciences. Course enrollment is restricted to juniors, seniors, and graduate students only.
Taught by: Hoke
Course not offered every year
Activity: Seminar
1 Course Unit

ANTH 451 Historical Archaeology
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 751
Activity: Seminar
1 Course Unit

ANTH 454 Quantitative Analysis of Anthropological Data
This course is designed to provide students with a basic understanding of how to work with and present quantitative data. Topics include graphical display of numerical data, probability, sampling, descriptive and inferential statistics (parametric and non-parametric two-and three group tests, regression and correlation). Using examples drawn from the social sciences and anthropology, the focus is on teaching the logic behind quantitative arguments and statistical tests, rather than on the mathematical formulas, making the course especially relevant for students who do not have a strong background in mathematics. This course fulfills the Colleges Quantitative Data Analysis requirement.
Taught by: Dibble
One-term course offered either term
Activity: Lecture
1 Course Unit

ANTH 458 Introduction to Paleopathology
Disease evaluated in its cultural context, based on findings in skeletal and mummified paleopathologic specimens. Instruction in examination of specimens. For senior anthropology majors, graduate and medical students.
Taught by: Zimmerman
Course not offered every year
Activity: Lecture
1 Course Unit

ANTH 508 Conservation of Archaeological Sites and Landscapes: Impossible Ruins
Archaeological sites and landscapes have long been considered places of historical and cultural significance and symbols of national and ethnic identity. More recently they have offered new opportunities for economic and touristic development in both urban and rural settings. With a unique set of physical conditions including fragmentation, illegibility, extreme environmental exposure and material deterioration, as well as contested ownership and control, their conservation, management, and interpretation as heritage places require special knowledge and methodologies for both heritage specialists and archaeologists. This seminar will address the history, theories, principles, and practices of the conservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display, legislation, policy, and contemporary issues of descendent community ownership and global heritage. The course will be organized as a seminar incorporating readings, lectures and discussions on major themes defining the subject of ruins and archaeological site conservation. Readings have been selected to provide exposure to seminal works in the development of theory and method as well as current expressions of contemporary practice. This will set the background for the selected case study site which will provide students the opportunity to work with primary and secondary materials related to archaeological and ruin sites: excavation reports, stabilization work, conservation and interpretation plans, etc. Students will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by UNESCO/ICOMOS/ICAHM and other organizations. This year the course site will be FORT UNION NATIONAL MONUMENT, NM.
Taught by: Erickson/Matero
One-term course offered either term
Also Offered As: HSPV 747
Activity: Seminar
1 Course Unit
Notes: For advanced undergraduates and graduate students

ANTH 511 Ethics, Archaeology, and Cultural Heritage
This seminar will explore some of the most important issues that are now a central part of archaeological, anthropological and historical research throughout the world. The identification and control of cultural heritage is a central part of the framework for research within other communities. Issues for this course will also include cultural identity, human rights, repatriation, colonialism, working with communities and many other topics. Field research today must be based upon a new series of ethical standards that will be discussed and examined within this class. Major topics include: cultural heritage - definitions and constructs, cosmopolitanism and collecting, archaeology and looting, cultural heritage preservation, museums - universal and national, museum acquisition policies, cultural identity, international conventions (including underwater issues), national laws of ownership, community based development, cultural tourism, development models, and human rights.
Taught by: Leventhal
Course not offered every year
Also Offered As: HIST 512
Activity: Seminar
1 Course Unit
ANTH 514 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Taught by: Boileau
Course not offered every year
Also Offered As: AAMW 512, CLST 512
Activity: Seminar
1 Course Unit

ANTH 519 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as "Second Life"), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Urban/Blum
Course not offered every year
Also Offered As: ANTH 309
Activity: Seminar
1 Course Unit

ANTH 521 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past.
ANTH 221/521 will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.
Taught by: Boileau/Dibble/Jansen
Course not offered every year
Also Offered As: ANTH 221, ARTH 230, CLST 244, NELC 284, NELC 584
Activity: Lecture
1 Course Unit

ANTH 527 Cultural Heritage and Conflict
Intentional destruction of cultural heritage is designed to erase the presence of a people in history and has become an all too familiar feature of the devastation wrought by contemporary violence and "ethnic cleansing." Recent cases appear frequently in news headlines and include such well-known examples as the 2001 demolition of the Bamiyan Buddhas in Afghanistan, the 2012 destruction of Sufi shrines in Timbuktu, Mali, and the recent obliteration of historic sites across Syria and Iraq. This course explores this phenomenon by examining such questions as: Why is cultural heritage targeted in conflict? Under what circumstances? By whom? In so doing, we will engage with readings that discuss the historical development of the international laws and norms that aim to protect cultural heritage during conflict and examples successful and unsuccessful humanitarian interventions.
Taught by: Brian Daniels
Course not offered every year
Activity: Lecture
1 Course Unit

ANTH 529 Psychoanalytic and Anthropological Perspectives on Childhood
This course will consider the interaction between culture and individual psychology, and between nature and nurture from birth to adulthood. Through an examination of phases of human development described by psychoanalysis, and evidence concerning psychoanalytic ideas from around the world, we will consider questions such as: How do people become who they are, both similar to others and uniquely individual? How do we develop emotionally? What features are and are not universal for our species? What is and is not known about these questions. The instructors are both psychoanalysts, one a psychiatrist, one a pediatrician. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Taught by: Blum/Shapiro
Course not offered every year
Also Offered As: ANTH 329
Activity: Seminar
1 Course Unit

ANTH 533 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: plants as foods and intoxicating beverages; medicines, poisons, and psychoactive plants; plants as building supplies and textiles; wild plant collection, and the origins of plant domestication. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: AAMW 539, CLST 543, NELC 585
Activity: Seminar
1 Course Unit
ANTH 543 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH’s public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climate and environmental data, in and beyond city government; they also shine light on climate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City’s Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet, community neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multimedia data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018.
Taught by: Wiggan
Course not offered every year
Also Offered As: COML 562, GRMN 544, URBS 544
Activity: Seminar
1 Course Unit

ANTH 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Taught by: Hall or Posecznick
One-term course offered either term
Also Offered As: EDUC 547, URBS 547
Activity: Lecture
1 Course Unit

ANTH 549 Topics in Archaeological Method and Theory
It is the stated purpose of archaeology to interpret the human past. However, this fascination with the things that came before is not new. Social memory, the construction of a collective notion about the ways things used to be, looms large in the archaeological record, particularly through the material representations of these memories – monuments. This class explores memory and monumentality, both ancient and modern, through world-wide case studies ranging from the American South to the islands of Polynesia and from 5000 BC to the present.
Taught by: Kasabian
Course not offered every year
Activity: Seminar
1 Course Unit

ANTH 551 Experimental Ethnography at the Interfaces of the Arts & Sciences
This course takes inspiration from conversations and practices occurring at the interfaces of cultural anthropology, the environmental humanities, and feminist science studies. Anthropologist Stuart McLean (2017) asked: “What might become of anthropology if it were to suspend its sometime claims to be a social science? What if it were to turn instead to exploring its affinities with art and literature as a mode of engaged creative practice carried forward in a world heterogeneously composed of humans and other than humans?” At the same time, the emergence of the environment humanities as an academic discipline in the twenty-first century reflects the growing conviction on the part of the diverse sectors that “environmental” problems cannot be solved by science and technology alone. Instead, cultivation of experimental methods and alliance building between the arts and social and natural sciences has become ever more important strategy in terms of fomenting public engaged scholarship. In this course, we will not necessarily suspend the social scientific claims of anthropology, and ethnography more specifically, but we will push our methodological premises and conceptual work to experiment with our objects of study, matters of concern, and the diverse materialities that emerge from and participate in our ethnographic work.
Taught by: Lyons
One-term course offered either term
Activity: Seminar
1 Course Unit

ANTH 553 Archaeology of East Asia
This is an introductory course on the ancient societies and civilizations of East Asia, especially in the areas known today as Japan, China, and Korea. This course will explore the general lifeway of the peoples in these regions during the prehistoric periods, specifically from the Mesolithic/Neolithic periods about 8000 BC up to the era of political unification around 700 AD in both the Japanese archipelago and the Korean peninsula. By examining primarily the art and architecture of these prehistoric societies, this course will explore important sociocultural aspects, including subsistence, sedentism, state formation, social stratification, leadership, warfare, trade, technology, population movement, and mortuary custom. The course aims to provide a thorough foundation for further study in the histories and cultures of ancient Japan, China, and Korea.
Taught by: Nishimura, Y
Course not offered every year
Also Offered As: ANTH 113, EALC 113, EALC 513
Activity: Lecture
1 Course Unit

ANTH 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Advanced seminar for potential professional archaeologists. Course will examine critically main past and present theoretical issues in archaeological research and interpretation, and consider various methodologies utilized towards these interpretive ends.
Taught by: Erickson
Course not offered every year
Also Offered As: AAMW 557, LALS 557
Prerequisites: ANTH 241 or ANTH 600 and one archaeology area course or permission from instructor
Activity: Seminar
1 Course Unit
**ANTH 562 Intro to Digital Archaeology**

Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.

Taught by: Peter Cobb

Course not offered every year

Also Offered As: AAMW 562, ANTH 362, CLST 362, CLST 562, NELC 362

Prerequisite: Prior archaeological classwork and/or experience preferred

Activity: Lecture

1 Course Unit

**ANTH 564 Colonial Ecologies**

This seminar explores the historical ecology of European colonial expansion in a comparative framework, concentrating on the production of “periphery” and the transformation of incorporated societies and environments. We begin with a discussion of the theoretical frameworks, sources of evidence, and analytical strategies employed by researchers to address the conjuncture of environmental and human history in colonial contexts, including underdevelopment and global systems of circulation; political ecology; and ecological imperialism. We then discuss the circulation of persons, crops, invasives, and microbes as fundamental conditions of emerging global systems. Drawing on these elements, we discuss landscapes as sites of misrecognition, rationalization, and cultural production. This discussion sets the stage for an examination of novel forms of economic and ecological production, including the emergence of the `drug foods`, the transformation of forest products, and the rise of the plantation. We then consider the political ecology of crisis in colonial settings, including agrarian collapse, famine, and `ecological poverty`.

Taught by: Lyckett

Course not offered every year

Prerequisite: Open to advanced undergraduates

Activity: Seminar

1 Course Unit

**ANTH 567 Living World in Archaeological Science**

By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

Taught by: White, Monge, Moore

Course not offered every year

Also Offered As: ANTH 267, CLST 268, CLST 568, NELC 286, NELC 586

Activity: Lecture

1 Course Unit

Also Offered As: ANTH 375

Activity: Lecture

1 Course Unit

**ANTH 581 Environmental Activism with Indigenous Communities**

We are living in a moment of Environmental crisis as the oceans rise and carbon emissions warm the planet. And yet more than half the US population believes climate change will not harm them personally and 30% feel they cannot trust science. As the standoff at Standing Rock and the #NoDapl movement made clear, Native Americans’ spirituality is playing a central role in galvanizing the public and providing alternative narratives to capitalist consumption. Students will work on ongoing projects to build partnerships between Penn and two Native American communities—Siting Bull College on the Standing Rock Sioux reservation in South Dakota and a UNESCO World Heritage Site nomination submitted by Ojibwe First Nations in Canada to preserve 24,000 sq. k.ms. of boreal forest through the use of Traditional Ecological Knowledge. This class will learn to build multi-media exhibits using Scalar, Omeka, Google Earth, and StoryMap. No previous experience is necessary. Students will learn about choosing a platform, creating dynamic narratives that incorporate videos and interactive features, and learning about grant writing in order to sustain digital projects and benefit Indigenous communities. Although the emphasis will be on practical applications or praxis, the course will also engage with new theories from the fields of Digital Humanities and Environmental Humanities as a basis for building new exhibits.

Taught by: Powell

Also Offered As: RELS 581

Activity: Seminar

1 Course Unit
ANTH 583 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/ videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Taught by: Hall, Kathleen & Das, Amit
Course usually offered in fall term
Also Offered As: EDUC 586
Activity: Seminar
1 Course Unit

ANTH 586 Desire and Demand II: Culture, Production, and Consumption in the Global Marketplace
The goal of this course is to understand and to investigate both historical and contemporary issues related to a culture of consumption. Reading topics cover both contemporary and scholarly issues in cultural anthropology, popular culture, consumer behavior, off-shore production, social networking, media and communications, financial and real estate markets and marketing. Class distinctions are equally interdisciplinary as we focus on investigating and identifying critical global/local linkages. We analyze the various ways in which Philadelphia and other "global cities" are competing for consumer revenues. We ask what factors have led contemporary society reaching its current stage of mass consumption and how have certain goods and services been reconfigured, packaged or re-packaged to attract new consumers. In order to better understand the link between consumption and production factors we explore the relationship between outsourcing and/or offshored production and modern consumption. Approximately sixty percent of the seminar takes place in the classroom and will include lecture, class discussion, and films. The remaining portion of the class meetings will involve local and regional travel. Research assignments emphasize the use of anthropological participant-observation techniques to investigate the relationships between culture and contemporary mass consumption within the contexts of gentrification, urbanization, and globalization.
Taught by: Diggs-Thompson
Course not offered every year
Also Offered As: ANTH 386
Activity: Seminar
1 Course Unit
Notes: See course description for ANTH 386.

ANTH 591 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform the processes and products of research?
How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according the Fellow's area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses
Taught by: Varied
One term course offered either term
Activity: Seminar
1 Course Unit

ANTH 593 Natural and Cultural Heritage in Global Perspective
This seminar will explore the ideas surrounding the theories, discourses, and practices surrounding natural and cultural heritage. Heritage has become inscribed in the planning of urban and rural landscapes, designed as tourist destinations, and considered a universal good in global cosmopolitan society. But it would be well to ask: what kind of "nature" and "culture" has been labeled as heritage? What kind of organizations, economics, and politics are necessary to sustain it? How are these put in place? By whom? For whom? Over the course of the semester, students will engage with readings that discuss how cultural and natural heritage is communicated to the public and the relationship between academic critique and pragmatic social engagement. This seminar is further grounded by a partnership between the Penn Cultural Heritage Center and the U.S. Mission to UNESCO focused on the assessment of World Heritage Sites, and students will have the opportunity to learn from and participate in specific case studies.
Taught by: Daniels
Course not offered every year
Activity: Seminar
1 Course Unit
ANTH 598 The Economics of Heritage
Governmental resources for archaeological and heritage sites are declining worldwide while commercial and economic development initiatives are threatening the fabric of heritage and the larger landscape environment to ever greater degrees. As a consequence, the competition for resources to protect and preserve heritage is intensifying, as is the challenge to articulate the value of heritage resources vs. competing commercial or public projects. This is the context for understanding the issues surrounding the definition of the value of cultural heritage assets and the tools available for their measurement and management. This course explores in some depth issues relating to the economic analysis of heritage and culture. It is designed to provide students with a foundational understanding of the economics of heritage-related projects, the tools and techniques available for their analysis and the ethical and practical issues of public policy and private actions that determine the future of heritage resources. Readings and case studies will explore technical, practical and ethical issues that arise in cultural heritage economics. Relevant analytical techniques will be introduced and particular emphasis will be placed on commercial, government and community issues unique to heritage-related activities. Special emphasis will be placed upon developing pertinent strategies for the tourist industry. Students will produce one case-study project intended to integrate the technical and practical aspects of the course.

Taught by: Peter Gould
Activity: Seminar
1 Course Unit

ANTH 600 Contemporary Archaeology in Theory
This graduate seminar addresses contemporary anthropological archaeology and considers the varied ways inferences are made about past and present human behavior from the archaeological record. It reviews such fundamental topics as the use of analogy, Middle Range theory, symbolism and meaning, social and cultural evolution, ideology and power, feminism and gender, and indigenous (non-Western) perspectives. It also foregrounds basic issues regarding heritage, looting, and ethics.

Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: First-year anthropology graduate students.

ANTH 602 Evolutionary Anthropology
This course will explore various subfields of biological anthropology to better understand what it means to be human. Special attention will be paid to current issues and problems in these subfields, and the different ways in which researchers are attempting to understand and uncover the details of human evolution. Among the areas that are explored in this course are paleoanthropology, primatology, human biology, molecular anthropology, evolutionary medicine, epigenetics, and human life history. Specific issues to be explored include the primate roots of human behavior, brain and language evolution, new fossil hominins, the origins of anatomically modern humans, and modern human migration history.

Taught by: Schurr
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: First-year anthropology graduate students.

ANTH 603 Language in Culture and Society
First-year anthropology graduate students or Instructor Permission. Examination of properties of human language which enable social persons to interpret the cultural world and to act within it. Topics include: principles of lexical and grammatical organization; the role of language structure (grammar) and linguistic context (indexicality) in discursive activity; referential uses of language; social interaction; markers of social role, identity, and group-belonging; criteria by which models of linguistic form and function are formulated; the empirical limits within which different models have explanatory value.

Taught by: Agha
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: First-year anthropology graduate students.

ANTH 607 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.

Taught by: Bruchac
Course not offered every year
Also Offered As: ANTH 307
Activity: Lecture
1 Course Unit

ANTH 610 Films of Utility: Analysis, Argument and Building Block
This course explores non-fiction film as a tool in creating discourse and catalyzing progressive social change. Our specific purpose will be to understand how non-fiction filmmaking- documentary and the essay film- can be used as a cultural strategy to affect political movement. Screening and analyzing a wide range of contemporary independent films, many produced in community settings outside the commercial entertainment marketplace, class participants will explore the forms and methods of these films of utility. Part of the course work will involve applying these filmmaking approaches to a short film project in support of a movement of importance to the student participant. A permit is required to enroll in this course. Please contact the instructor at lmassiah@scribe.org

Taught by: Louis Massiah
Course not offered every year
Activity: Seminar
1 Course Unit

ANTH 617 Contemporary Approaches to the Study of Culture and Society
A critical examination of recent history and theory in cultural and social anthropology. Topics include structural-functionalism; symbolic anthropology; post-modern theory. Emphasis is on major schools and trends in America, Britain, and France.

Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: First-year anthropology graduate students.
ANTH 620 Directed Reading and Research
To be arranged only by consultation with academic adviser and faculty member(s) to be involved; a proposed syllabus must be presented for approval, and written papers will be required without exception. On approval of these papers one copy must be presented to the Department of Anthropology office for filing.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: May be repeated for credit

ANTH 621 Directed Field Training and Research
To be arranged only by consultation with academic adviser and the faculty member(s) to be involved; a proposed syllabus must be presented for approval and written papers will be required without exception. On approval of these papers, one copy must be presented to the Department of Anthropology office for filing.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: May be repeated for credit

ANTH 626 Intensity
This course examines the manner in which humans encounter the continuous and gradable features of phenomena in social life - sensory qualities of objects, people’s aspirations and affect, pitch movement during voiced talk, monsoons and sea breezes, biological growth and environmental degradation, migratory flows in transnational settings - and attempt to evaluate or convert them into discrete dimensions of social life. We examine how intensities and gradients are managed in everyday life as well as in institutional settings - through government policies, scientific protocols, surveillance regimes, infrastructural agendas - and we survey the ways in which everyday and institutional practices reflect and shape each other in societies across the world.
In particular, we explore the question of what an anthropology of intensity might look like, and how it may reconfigure approaches to the ethnographic study of human affairs.
Taught by: Carruthers
Activity: Seminar
1 Course Unit

ANTH 628 Language in Culture and Society: Special Topics
The course is devoted to a single research topic of contemporary interest in linguistic anthropology. Topics vary from year to year. Readings locate current debates in relation to longstanding assumptions in the literature and new directions in contemporary research.
Taught by: Agha
Course not offered every year
Prerequisite: ANTH 603 or Instructor Permission
Activity: Seminar
1 Course Unit

ANTH 633 Forensic Anthropology
This course will investigate and discuss the various techniques of analysis that biological anthropologists can apply to forensic cases. Topics include human osteology, the recovery of bodies, the analysis of life history, the reconstruction of causes of death, and various case studies where anthropologists have contributed significantly to solving forensic cases. Discussions will include the limitations of forensic anthropology and the application of DNA recovery to skeletal/mummified materials.
Taught by: Monge
Course not offered every year
Also Offered As: ANTH 230, CRIM 230
Activity: Lecture
1 Course Unit

ANTH 634 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to “write women’s worlds”, but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline’s epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world.
Taught by: Thomas
Course not offered every year
Also Offered As: ANTH 334, GSWS 334, GSWS 634
Activity: Seminar
1 Course Unit

ANTH 636 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadrezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.
Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 236, NELC 241, NELC 641, URBS 236
Activity: Lecture
1 Course Unit
ANTH 643 Globalization And Its Historical Significance
Globalization is one of the most comprehensive topics of our time, and also one of the most controversial. This course assesses the current state of globalization, considering it in terms of economic, political, and cultural change, and follows its progress through the semester. The class will be led through the main topics and debates, introduced to conceptual and empirical tools for framing academic discussion and research about its dynamics, how and when it began, and (most particularly) how it differs from earlier episodes of historical change.
Taught by: Spooner
Course not offered every year
Activity: Seminar
1 Course Unit

ANTH 649 Molecular Anthropology
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological questions concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, biogeogenetics of skin color, and physiological, phenotypic and disease adaptations.
Taught by: Schurr
Course not offered every year
Also Offered As: ANTH 246
Activity: Seminar
1 Course Unit

ANTH 654 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in fall term
Also Offered As: ANTH 100, NELC 281, NELC 681, SAST 161
Activity: Lecture
1 Course Unit

ANTH 655 Methods and Grantwriting for Anthropological Research
This course is designed for third- and fourth-year graduate students in anthropology who are working on their dissertation research proposals and submitting grants. Graduate students from other departments who will be submitting grant proposals that include an ethnographic component are also welcome. Students will develop their proposals throughout the course of the semester, and will meet important fall submission deadlines. They will begin by working with various databases to search funding sources relevant to the research they plan to conduct. In class sessions, they will also work with the professor and their peers to refine their research questions, their methods, the relationship of any previous research to their dissertation fieldwork, and the broader theoretical and "real-world" significance of their proposed projects. Finally, students will also have the opportunity to have live "chats" with representatives from funding agencies, thereby gaining a better sense of what particular foundations are looking for in a proposal.
Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ANTH 658 Discourse-Centered Research Seminar
This seminar explores the interface between discourse, culture, and social processes. It is designed for graduate students in anthropology and related disciplines who (1) wish to study the current literature in linguistic anthropology concerned with discourse-centered approaches to culture; and (2) themselves have or will acquire during the semester discourse materials (texts, recordings, ethnographic data, etc.) that they wish to analyze from an anthropological point view. The instructor will spend time discussing his own past and current research. Class sessions will also include discussion of the writings of contemporary anthropologists investigating culture through discourse. The seminar is designed for maximum flexibility in accommodating students’ research interests and needs.
Taught by: Urban
One term course offered either term
Activity: Seminar
1 Course Unit

ANTH 704 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course usually offered in fall term
Also Offered As: EDUC 706, FOLK 706, URBS 706
Activity: Lecture
1 Course Unit

ANTH 707 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project.
Taught by: Hall
Course usually offered in spring term
Also Offered As: EDUC 700
Prerequisites: Must have completed EDUC 721 or equivalent introductory qualitative methods course.
Activity: Lecture
1 Course Unit

ANTH 709 Current Research in Paleoanthropology
An intensive review of the major topics relating to Pleistocene human evolution, focusing on the integration of data from both biology and archaeology.
Taught by: Dibble
One term course offered either term
Activity: Seminar
1 Course Unit
ANTH 719 Archaeology Field Project
This is a parallel course to ANTH 219, but on the graduate level. It will only be open to select graduate students (i.e. historical archaeology students and some CGS MA students). Specific permission of the instructor is required in each case.
Taught by: Schuyler
Course usually offered in fall term
Also Offered As: ANTH 219
Activity: Seminar
1 Course Unit
Notes: Permission of instructor required.

ANTH 720 Archaeology Laboratory Field Project
Follow-up for ANTH 719 and parallel course to ANTH 220. Class will meet in three hour sessions on Fridays and Saturdays and will involve the analysis of artifacts, documentary records, oral historic sources and period illustrations collected on Southern New Jersey historic sites that fall. No previous archaeological or lab experience is required. (Robert L. Schuyler; schuyler@sas.upenn.edu; (215) 898-6965; UMuseum 412).
Course may be repeated for credit.
Taught by: Schuyler
Course usually offered in spring term
Also Offered As: ANTH 220
Activity: Laboratory
1 Course Unit

ANTH 730 Readings & Research In Linguistic Anthropology
The course is designed for students and faculty interested in discussing current research and/or research topics in any area of linguistic or semiotic anthropology. The primary intent of the course is to familiarize students with the literature on selected research topics and to develop their own research agendas in the light of the literature. Students may enroll on an S/U basis for 0.5 CU per semester. The course may be repeated for credit up to 4 times.
Taught by: Agha
Two terms. student may enter either term.
Prerequisite: ANTH 603 OR INSTRUCTOR PERMISSION
Activity: Seminar
1 Course Unit

ANTH 733 Colloquium Seminar
This graduate seminar is a full year course open to second year anthropology graduate students. Other interested students should contact the instructors for permission before enrolling. Topic changes each year, corresponding to the Penn Anthropology Department Colloquium series.
Taught by: Smit and Urban
Two terms. student may enter either term.
Activity: Seminar
1 Course Unit

ANTH 751 Historical Archaeology
Archaeology of the Modern World from the Columbian voyage (1492) to the 20th century. Topics such as the rise of early modern Europe, European exploration and colonization, African American Archaeology, Asian American Archaeology, the rise of colonial society, contact with native peoples, the Industrial Revolution, and the archaeology of the 20th century will be covered.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 451
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit.

ANTH 752 Archaeology of American History: The Colonial Period
Over the last fifty years archaeologists have been exploring historic sites in the United States dating from both the Colonial Period and the 19th/20th centuries. What can archaeology now tell us about the origins of American society, the invasion of North America by various European peoples (Spanish, English, Dutch), the impact on native peoples, the rise of African American and Asian American cultures, major crisis (e.g. the revolution, Civil War, and the Great Depression), the settlement of the Far American West, and the final emergence of a truly national culture in the 20th century? A basic question will be how an American history based on both archaeology and archival sources is different and more complete than an image of the past drawn only from written sources.
Taught by: Schuyler
Course not offered every year
Also Offered As: ANTH 151
Activity: Seminar
1 Course Unit

Applied Math & Computational Science (AMCS)

AMCS 510 Complex Analysis
Complex numbers, DeMoivre's theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy's integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
Taught by: Staff.
One-term course offered either term
Also Offered As: MATH 410
Activity: Lecture
1 Course Unit

AMCS 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: MATH 314, MATH 514
Prerequisite: Math 114 or Math 115
Activity: Lecture
1 Course Unit

AMCS 520 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Also Offered As: MATH 420
Prerequisite: Math 240
Activity: Lecture
1 Course Unit
AMCS 525 Partial Diff Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Course usually offered in fall term
Also Offered As: MATH 425
Prerequisites: MATH 240 or permission of instructor. Knowledge of PHYS 150-151 will be helpful.
Activity: Lecture
1 Course Unit

AMCS 567 Mathematical and Computational Modeling of Biological Systems.
This is an introductory course in mathematical biology. The emphasis will be on the use of mathematical and computational tools for modeling physical phenomena which arise in the study biological systems. Possible topics include random walk models of polymers, membrane elasticity, electrodiffusion and excitable systems, single-molecule kinetics, and stochastic models of biochemical networks.
Course not offered every year
Also Offered As: BE 567
Prerequisites: BE 324 and BE 350
Activity: Lecture
1 Course Unit

AMCS 584 Math of Med Imag&Measure
Course not offered every year
Also Offered As: BE 584, MATH 584
Activity: Lecture
1 Course Unit

AMCS 599 Independent Study
Activity: Independent Study
1 Course Unit

AMCS 602 Algebraic Techniques for Applied Mathematics and Computational Science, I.
We turn to linear algebra and the structural properties of linear systems of equations relevant to their numerical solution. In this context we introduce eigenvalues and the spectral theory of matrices. Methods appropriate to the numerical solution of very large systems are discussed. We discuss modern techniques using randomized algorithms for fast matrix-vector multiplication, and fast direct solvers. Topics covered include the classical Fast Multipole Method, the interpolative decomposition, structured matrix algebra, randomized methods for low-rank approximation, and fast direct solvers for sparse matrices. These techniques are of central importance in applications of linear algebra to the numerical solution of PDE and in Machine Learning. The theoretical content of this course is illustrated and supplemented throughout the year with substantial computational examples and assignments.
Course not offered every year
Activity: Lecture
1 Course Unit

AMCS 603 Algebraic Techniques for Applied Mathematics and Computational Science, II.
We begin with an introduction to group theory. The emphasis is on groups as symmetries and transformations of space. After an introduction to abstract groups, we turn our attention to compact Lie groups, in particular SO(3), and their representations. We explore the connections between orthogonal polynomials, classical transcendental functions and group representations. This unit is completed with a discussion of finite groups and their applications in coding theory.
Course not offered every year
Activity: Lecture
1 Course Unit

AMCS 608 Analysis
Complex analysis; analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge’s theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to Real Analysis: Weierstrass approximation, Lebesgue measure and integration Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp spaces, Fubini’s Theorem.
Course not offered every year
Also Offered As: MATH 608
Prerequisite: Math 508-509
Activity: Lecture
1 Course Unit

AMCS 609 Analysis
Course not offered every year
Also Offered As: MATH 609
Prerequisites: Math 608 or permission of the instructor.
Activity: Lecture
1 Course Unit

AMCS 610 Functional Analysis
Also Offered As: MATH 610
Prerequisites: Math 608 or 609, some elementary complex analysis is essential.
Activity: Lecture
1 Course Unit

AMCS 999 Independent Study & Research
Study under the direction of a faculty member.
Activity: Independent Study
1 Course Unit
### Arabic (ARAB)

**ARAB 031 Elementary Arabic I**

This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 031) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full survival’ in the native-speaking environment.

- **For BA Students:** Language Course  
  Course usually offered in fall term  
  Also Offered As: ARAB 631  
  Activity: Lecture  
  1 Course Unit

**ARAB 032 Elementary Arabic II**

This course is a continuation of ARAB 031/631.

- **For BA Students:** Language Course  
  Course usually offered in spring term  
  Also Offered As: ARAB 632  
  Prerequisite: ARAB 031  
  Activity: Lecture  
  1 Course Unit

**ARAB 033 Intermediate Arabic III**

This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 031-032, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.

- **For BA Students:** Language Course  
  Course usually offered in fall term  
  Also Offered As: ARAB 633  
  Prerequisites: ARAB 032 or equivalent  
  Activity: Lecture  
  1 Course Unit

**ARAB 034 Intermediate Arabic IV**

This course is a continuation of ARAB 033/633.

- **For BA Students:** Last Language Course  
  Course usually offered in spring term  
  Also Offered As: ARAB 634  
  Prerequisite: ARAB 033  
  Activity: Lecture  
  1 Course Unit

**ARAB 035 Advanced Intermediate Arabic I**

This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.

- **For BA Students:** Advanced Language Course  
  Course usually offered in fall term  
  Also Offered As: ARAB 635  
  Prerequisite: ARAB 034  
  Activity: Lecture  
  1 Course Unit

**ARAB 036 Advanced Intermediate Arabic II**

This course is a continuation of ARAB 035/635.

- **For BA Students:** Advanced Language Course  
  Course usually offered in spring term  
  Also Offered As: ARAB 636  
  Prerequisite: ARAB 035  
  Activity: Lecture  
  1 Course Unit

**ARAB 037 Advanced Arabic and Syntax I**

Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them.

- **For BA Students:** Advanced Language Course  
  Course usually offered in fall term  
  Also Offered As: ARAB 637  
  Prerequisites: ARAB 036/636 or permission of the instructor.  
  Activity: Lecture  
  1 Course Unit

**ARAB 039 Colloquial Arabic**

A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor. One-term course offered either term

- **Also Offered As:** ARAB 639  
  Prerequisite: ARAB 032  
  Activity: Lecture  
  1 Course Unit

**ARAB 041 Beginning Arabic I**

This is a beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full survival’ in the native-speaking environment.

- **Course usually offered in fall term**  
  Activity: Lecture  
  1 Course Unit  
  Notes: See the LPS Course Guide. **This course does not fulfill the College/Wharton language requirement.**
ARAB 042 Beginning Arabic II
For BA Students: Language Course
Course usually offered in spring term
Prerequisites: ARAB 041 or permission of the instructor. See the LPS Course Guide. **This course does not fulfill the College language requirement.
Activity: Lecture
1 Course Unit

ARAB 043 Continuing Arabic III
This is the continuation of ARAB041 and ARAB 042, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 041-042, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Liberal and Professional Studies language requirement in Arabic but not for the School of Arts and Sciences. However, it should be emphasized that you will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: See the CLPS Course Guide. **This course does not fulfill the College language requirement.

ARAB 044 Continuing Arabic IV
Course usually offered in spring term
Prerequisites: ARAB 043 or permission of the instructor. See the LPS Course Guide. **This course does not fulfill the College language requirement.
Activity: Lecture
1 Course Unit
Notes: See the LPS Course Guide. **This course does not fulfill the College language requirement.

ARAB 131 Intensive Elementary Arabic I&II
This is a six-week intensive beginners’ course in Modern Standard Arabic (MSA). It will introduce the student to speaking, listening, reading, and writing skills in the standard means of communication in the Arabic world. The course is proficiency-based, implying that all activities are aimed at placing the student in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 041) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; i.e. the terminology of the government’s Foreign Service Institute) survival to ‘full survival’ in the native-speaking environment.
For BA Students: Language Course
Course usually offered summer term only
Activity: Lecture
2 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 133 Intensive Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see the Penn Summer Course Guide. This is the continuation of ARAB031-32 or ARAB 131, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing the student in the context of the native-speaking environment from the very beginning. As in ARAB 031-032 or ARAB 131, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Arts and Sciences language requirement in Arabic. However, it should be emphasized that the student will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Lecture
2 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 135 Intensive Advanced Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see Penn Summer Course Guide. It continues from the first intermediate course, ARAB 033/034 or ARAB 133. Emphasis continues to be on all four language skills: speaking, listening, reading, and writing. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both achievement-based and proficiency-based. There is no Oral Proficiency Interview at the end of this session, but we anticipate that by the end of this, third year students will range in proficiency from Intermediate High to Advanced Mid on the ACTFL scale.
For BA Students: Advanced Language Course
Course usually offered summer term only
Activity: Lecture
2 Course Units
Notes: Offered through the College of Liberal and Professional Studies Summer Session I.

ARAB 180 Arabic in Residence
The Arabic House is dedicated to practicing Modern Standard Arabic outside of the classroom setting. The group meets two evenings per week for an hour of conversation practice, snacks, and mint tea. Conversations are both casual and group led. Members are encouraged to bring any questions about their homework from class or about the Arabic language in general. Most activities are held in the Greenhouse of the Class of 1925 building located at 3941 Irving Street. Additional cultural activities may take place in Gregory, elsewhere at Penn or throughout Philadelphia. All students and Arabic enthusiasts, whether graduate or undergraduate, first semester beginners or native speakers, are welcome to attend. Dedicated undergraduate students may choose to enroll for credit (Arabic 180).
Activity: Seminar
0.5 Course Units

ARAB 235 The Adab Tradition
Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 735
Activity: Seminar
1 Course Unit
ARAB 331 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview.
For BA Students: Advanced Language Course
One term course offered either term
Also Offered As: ARAB 351
Prerequisite: ARAB 036/636
Activity: Lecture
1 Course Unit

ARAB 333 Readings in the Qur’an and Tafsir
This course has two goals: to introduce undergraduate students to reading the Qur’an in Arabic, and to enhance the speaking, listening, and writing skills in MSA. Through the reading and study of selected major Qur’anic narratives and commentary (tafsir), students will become familiar with Qur’anic vocabulary, style, recitation practices, and other intricacies of the Qur’anic text. All students will also memorize a short sura of their choice and practice reciting it in an aesthetically appropriate manner (typically suras 1, 112, 113, or 114). Taught in MSA with writing assignments in MSA.
Taught by: Lowry
Course offered spring; even-numbered years
Prerequisites: ARAB 35 or permission of the instructor.
Activity: Seminar
1 Course Unit

ARAB 432 Arabic Readings in Belles-Lettres
This course aims to improve reading skills and vocabulary by introducing students to extensive passages taken from a variety of Arabic literary genres from all periods. Taught in MSA with writing assignments in MSA.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: COML 432
Prerequisite: Proficiency in ARAB 036/636
Activity: Seminar
1 Course Unit

ARAB 433 Arabic Readings in the Social Sciences and the Media
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA.
Course offered spring; odd-numbered years
Prerequisites: Completion of ARAB 036/636 or permission of the instructor.
Activity: Lecture
1 Course Unit

ARAB 434 Readings in Arabic Literature
Course not offered every year
Prerequisite: Reading knowledge of Arabic
Activity: Seminar
1 Course Unit

ARAB 436 Introduction to Pre-Modern Arabic Texts
This course aims to provide incoming graduate students and advanced undergraduate students with an introduction to issues in Arabic grammar and syntax that commonly arise in pre-modern Arabic texts. Students will also be introduced to, and expected to consult, the standard reference works used as aids in reading such texts. Students will be expected to prepare a text or set of texts assigned by the instructor for each session. It is intended that, upon completion of this course, students will be able to work independently with a wide variety of pre-modern Arabic texts. Although the texts in this course are pre-modern, the course reinforces MSA reading skills.
Taught by: Lowry
Course offered fall; even-numbered years
Prerequisites: Completion of ARAB 036/636 Advanced Intermediate Arabic; or permission of the instructor.
Activity: Seminar
1 Course Unit
Notes: May be taken twice for credit with instructor’s permission.

ARAB 437 History & Fiction in Arabic
Activity: Seminar
1 Course Unit

ARAB 531 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA.
For BA Students: Advanced Language Course
Course usually offered in fall term
Also Offered As: ARAB 331
Prerequisite: ARAB 036/636
Activity: Lecture
1 Course Unit

ARAB 533 Readings in Islamic Law
Taught by: Lowry
Course not offered every year
Prerequisites: Completion of ARAB036/636 or permission of the instructor.
Activity: Seminar
1 Course Unit

ARAB 534 Arabic: Reading Historical Manuscripts
Arabic language is used by many societies not only in communication but also in correspondence and in documenting the affairs of their daily lives. Arabic script is adopted by many groups who native languages are not Arabic, in writing their language before some moved to the Roman alphabet. In many historical documents specific style of writing and handwriting are dominant. This specificity is influenced by the dialectical variations, the historical development of each region and the level of Arabic literacy and use.
Taught by: Dinar
Course not offered every year
Activity: Seminar
1 Course Unit
ARAB 631 Elementary Arabic I
This is the beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course (ARAB 002) students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government's Foreign Service Institute), from 'incipient survival' to 'full survival' in the native-speaking environment.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 031
Prerequisites: For the second semester: completion of the first semester or permission of the instructor.
Activity: Lecture
1 Course Unit

ARAB 632 Elementary Arabic II
This course is a continuation of ARAB 031/631.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 032
Activity: Lecture
1 Course Unit

ARAB 633 Intermediate Arabic III
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB 031 and ARAB 032, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 031-032, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
For BA Students: Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 033
Prerequisites: ARAB 033 or equivalent. For the second semester: completion of the first semester or permission of the instructor
Activity: Lecture
1 Course Unit

ARAB 634 Intermediate Arabic IV
This course is a continuation of ARAB 033/633.
For BA Students: Last Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 034
Activity: Lecture
1 Course Unit

ARAB 635 Advanced Intermediate Arabic I
This is a proficiency-based course which continues from the first intermediate course, ARAB 033/034. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based. The text of speaking ability will
For BA Students: Advanced Language Course
Also Offered As: ARAB 035
Prerequisites: ARAB 033 or permission of instructor.
Activity: Lecture
1 Course Unit

ARAB 636 Advanced Intermediate Arabic II
This course is a continuation of ARAB 035/635.
For BA Students: Advanced Language Course
Two terms. student must enter first term.
Also Offered As: ARAB 036
Activity: Lecture
1 Course Unit

ARAB 637 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them.
For BA Students: Advanced Language Course
One-term course offered either term
Also Offered As: ARAB 037
Prerequisites: ARAB 036/636 or permission of the instructor.
Activity: Lecture
1 Course Unit

ARAB 639 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor. Course not offered every year
Also Offered As: ARAB 039
Activity: Lecture
1 Course Unit

ARAB 731 Topics in Islamic Studies
Topics vary from year to year in accordance with the interests and needs of students. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Taught by: Lowry
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: ARAB 436 or equivalent
ARAB 733 Arabic Texts in Islamic History
This is a graduate seminar course in which different genres of premodern Arabic texts are covered at the advanced graduate level. Students in this course are expected to be able to read and prepare (vowel, parse, and translate) passages from Arabic texts on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent and potential topics include: Geographers and travel accounts; biographical dictionaries; chronicles; heresiography; poetry; memoir and sira. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills. Taught by: Cobb
Course not offered every year
Prerequisites: ARAB 036 or permission of the instructor.
Activity: Seminar
1 Course Unit

ARAB 734 Selected Topics in Arabic Literature
This is a survey of Arabic poetry from the Pre-Islamic era until today. Readings will be selected to trace major thematic and formal developments in Arabic poetry. Readings also include excerpts from modern critical scholarship on the topic in Arabic. The class aims to introduce students to the basics of academic research and writing in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA. Taught by: Fakhreddine
Course not offered every year
Activity: Seminar
1 Course Unit

ARAB 735 The Adab Tradition
This is a survey of pre-modern Arabic prose. Selections will be made from major books of Adab, compilations of akhbār, the Qurʾān, the sūraḥ, and critical treatise. Readings will be accompanied by excerpts from modern critical scholarship on the topic in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA. Taught by: Fakhreddine, H.
Course not offered every year
Also Offered As: ARAB 235
Activity: Seminar
1 Course Unit

Architecture (ARCH)

ARCH 102 Introduction to Design
An exploration of the design process utilizing drawing and model-making techniques. Skills of representation and fabrication are introduced in the context of the development of each student’s capacity to observe, interpret, and translate design concepts into physical form. The course includes a weekly lecture and a biweekly studio component. Taught by: Faculty
Course usually offered in spring term
Activity: Lecture
1 Course Unit

ARCH 111 Architecture in the Anthropocene
This course will use architecture and the built environment as a lens to investigate the emerging field of the environmental humanities. Our goal will be to analyze and understand these new intellectual frameworks in order to consider the relationship between global environmental challenges and the process of constructing the built environment. As such, we will oscillate between social and political theory, environmental history, and architectural history and theory. Issues of importance will include: theories of risk, the role of nature in political conflicts; images, design and environmental communication; and the relationship between speculative design and other narratives of the future. These conceptual frameworks will be read alongside examples of related creative projects in art, literature, and architecture, and will be amplified through presentations and discussions with studio faculty and other visitors to the course. Taught by: Barber
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 112 Villa Gardens and Villa Life
This seminar will study the idea of villeggiatura (villa life) and the ideology associated with countryside gardens and plantations. In an examination of the circularity of villa ideology across the centuries, other themes will emerge that address the relationship between urban and rural life, between architecture and natural environment and between social, cultural, economic, and political forces and landscape design. These themes will be explored through the study of selected villas and through the reading of sources drawn from villa literature, including architectural and agricultural treatises, epistolary exchanges, and drawings. Taught by: Giannetto
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 201 Design Fundamentals I
This studio course develops drawing and model-making skills with emphasis on digital representation and digital fabrication. The capacity of nature inspired design is explored as a foundation for the creative production of new forms of expression. Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 102
Activity: Studio
1.5 Course Unit

ARCH 202 Design Fundamentals II
A studio course exploring the relationship between two-dimensional images and three-dimensional digital and physical models. This studio course develops advanced techniques in digital representation and fabrication through an investigation of the theme of inhabitation in architecture. Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 201
Activity Studio
1.5 Course Unit
ARCH 301 Design I
An introduction to the design of architecture in the city. Students explore the relationships between two-dimensional patterns and their corresponding three-dimensional interpretations through the orthographic drawings of plan, section, and elevation and three-dimensional digital and physical models.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 202
Activity: Studio
2 Course Units

ARCH 302 Design II
An introduction to the design of architecture in the landscape. Issues of mapping, placement, scale, and construction are explored through studio design projects, site visits, and discussions. Course work focuses on the preparation and presentation of design projects emphasizing analytical skills along with the development of imaginative invention and judgment.
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 301
Corequisite: ARCH 312
Activity: Studio
2 Course Units

ARCH 303 Integrated Product Design Fundamentals
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).
Taught by: Wesley
Course usually offered summer term only
Also Offered As: IPD 503
Activity: Studio
1 Course Unit

ARCH 311 Venice: Self-Representation, Performance, and Reception
This course focuses on the city of Venice and its elusive identity as represented in written, visual and built form. Structured as a series of topics and case studies (including primary visual and written sources; buildings and gardens) the course aims to introduce students to the material and cultural landscape of Venice and develop their ability to "read" the urban fabric and its unique physical context by identifying its various features and explaining the political, social, economic and cultural agendas that brought them into existence. The course includes visits to Venice, Van Pelt Library Library and the Philadelphia Museum of Art.
Taught by: Finotti and Fabiani Giannetto
Activity: Seminar
1 Course Unit

ARCH 312 Topics in Theory I
This course examines the development of modern architecture in the early-twentieth century. Case studies and selected texts are used to explore how modern architecture responded to the challenges of the Industrial Revolution and social modernization.
Taught by: Faculty
Course usually offered in spring term
Corequisite: ARCH 302
Activity: Lecture
1 Course Unit

ARCH 316 Systems and Environments: Interdisciplinary History of Architectural Ideas
This seminar will discuss the emergence of 20th century environmentalist thought and practice through the lens of architectural landscape, and urban practices and ideas. The course does not presuppose advanced knowledge in the histories of architecture, of science, or of environmentalism; rather, it will introduce students to a set of historical and intellectual frameworks broadly aware of and engaged in environmental challenges. The material covered will be relevant to those interested in architecture, art, and urban studies, and students in economics, engineering, political science, and the environmental sciences, as well as in the history of science, will find much to engage. In this sense, the course will also offer an interdisciplinary forum for inquiry and discussion around environmental issues as they are reflected in contemporary scholarly and professional practices.
Taught by: Barber
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 320 Media and Memories of the Future: Sound and Environment in Berlin.
This global cities seminar will discuss the cultural politics of memory as they develop through the spatial and sonic atmosphere of post-war Berlin. A city rich in history and focused on the future, Berlin is a laboratory for how exploration of the recent past is re-scripting the near future. The city becomes a palimpsest sonically visually and spatially that is available for investigation and interpretation as a means to understand historical patterns and their relationship to novel practices and methods in the present. Media, and in particular sonic cultures, as well as real estate economics and ecological design will form interrelated prisms through which to understand cities, urban practices, urban memory and the transformation of the environment. Methodologically, the course will be an experiment in the use of media to understand cities and engage with urban practices.
The course also involves a mandatory, funded field trip to Berlin during spring break when students will participate in the ongoing Anthropocene Curriculum at the Haus der Kultur der Welt and will visit sound art galleries and sound design studios, as well as meeting with practitioners and researchers. Entrance to the course is via application.
Music320(naomiwal@sas.upenn.edu)&ARCH320(barberda@design.upenn.edu)
Taught by: Daniel Barber and Naomi Waltham Smith
Course usually offered in spring term
Also Offered As: MUSC 320
Activity: Seminar
1 Course Unit
ARCH 370 Twentieth Century New York: Theories, Images, Realities
"New York is the perfect model of a city, not the model of a perfect city." -Lewis Mumford. This course is constructed as an argument among four visionary thinkers whose differing theories of the twentieth-century city were shaped by their response to New York City's modern urban architectural, and environmental development: Lewis Mumford (1895-1990), Robert Moses (1888-1981), Jane Jacobs (1916-2006), and Rem Koolhaas (1944). The seminar explores the central problems that preoccupied each, from civic representation and sustainability to large-scale infrastructure and urban renewal, from community and complexity to urban experience and the urban imaginary. Readings of key texts by and about the four main figures are supplemented with related material and with case studies of New York's built environment. The class includes two trips to New York to visit selected sites. The focus is double: on the role and agency of the "urban intellectual" in the production of urban culture; and on New York's material history and visual representations. New York has been called the capital of the twentieth century. The seminar aims to assess the continuing relevance of the ideas of this quartet of influential thinkers and to reflect on twenty-first-century New York in light of its evolution over the last hundred years. Taught by: Joan Ockman and Lee Ann Custer
Course usually offered in spring term
Also Offered As: ARTH 370
Activity: Seminar
1 Course Unit

ARCH 401 Advanced Design
Content and technique are explored in this studio course through the vehicle of a design project focused on the development of a critical understanding of geometries and mathematics in the representation and fabrication of contemporary architecture.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 302
Corequisite: ARCH 411
Activity: Studio
2 Course Units

ARCH 411 Theory II
This course examines the development of geometries in modern architecture. Primary and secondary texts are used to explore the origin and evolution of geometrical thinking in architecture.
Taught by: Faculty
Course usually offered in fall term
Prerequisite: ARCH 312
Corequisite: ARCH 401
Activity: Lecture
1 Course Unit

ARCH 431 Construction I
Course explores basic principles and concepts of architectural technology and describes the interrelated nature of structure, construction and environmental systems. Open to Intensive Majors only. Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 531
Activity: Lecture
0.5 Course Units

ARCH 432 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building. Open to Intensive Majors only. Taught by: Faculty
Course usually offered in spring term
Also Offered As: ARCH 532
Prerequisite: ARCH 431
Activity: Lecture
1 Course Unit

ARCH 433 Building Systems Integration
What makes buildings livable and buildable. After the initial concept design and massing studies are complete the next step is detailing. This seminar will examine the detail, how they can inform and enhance a building's design. The primary goals of a building is that it stands up to external forces, protects inhabitants from the elements and provides a healthy environment. This course will look at the individual components of structure, skin and systems. More importantly though, it will examine the connections between them. The class will begin with lectures examining the different systems and then progress into applying these ideas as a whole to individual studio projects. The final results of this course will be a 3D wall section with accompanying details. These details will be developed in a variety of software as chosen by the student. Recommended options are Revit, Rhino, AutoCAD. Taught by: Faculty
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

ARCH 435 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Majors only. Taught by: Faculty
Course usually offered in fall term
Also Offered As: ARCH 535
Activity: Lecture
0.5 Course Units

ARCH 436 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored. Open to Intensive Design majors only. Taught by: Faculty
Course usually offered in spring term
Also Offered As: ARCH 536
Prerequisite: ARCH 435
Activity: Lecture
0.5 Course Units
ARCH 437 Parametric Modeling and Construction I
An introduction to the principles of construction using Building Information Modeling (BIM), a process involving the generation and manipulation of digital representations of building components defined as parameters in relation to other components. The course will explore the performance of building materials and methods of on-site and off-site assembly in load-bearing masonry structures and heavy and light wood frame construction. Topics include sustainable construction, emerging and engineered materials, and integrated building practices.
Taught by: Morgan
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

ARCH 482 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmsted Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the language of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Frederick Steiner
Course usually offered in spring term
Also Offered As: CPLN 685, LARP 780
Activity: Seminar
1 Course Unit

ARCH 490 Independent Study
Taught by: Faculty
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Permission of the Undergraduate Chair.

ARCH 492 Senior Thesis
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 301
Activity: Independent Study
1 Course Unit
Notes: Permission of the Undergraduate Chair

ARCH 498 Senior Honors Thesis
Taught by: Faculty
Course usually offered in spring term
Prerequisite: ARCH 401
Activity: Independent Study
1 Course Unit
Notes: Permission of the Undergraduate Chair

ARCH 500 Summer Preparatory Design Studio
The Summer Preparatory Studio offers an intensive drawing and design experience to candidates for admission to the Graduate Program in Architecture who have not completed the necessary design studio prerequisites or who are required to have additional design experience to qualify for matriculation into the Master of Architecture Professional Degree Program in September. Enrollment in this program does not count towards the Master of Architecture degree. The intent of the drawing component of the course is to familiarize the student with primarily black and white mediums (pencil, charcoal, ink, etc). Exercises are designed to sharpen the student's ability to see selectively and to transform image to paper through both line and tonal renditions in freehand sketch form. Exercises will also familiarize the student with basic drafting skills necessary for architectural communication and provide an introduction to computer-aided design through applications of the intensive Rhino and Illustrator tutorials given in the Digital Navigation course. The design part of the course presents a rhythm of basic three-dimensional design studies and simple architectural studio investigations. These are intended to build fundamental skills and acquaint the student with the architectural issues of form, space, conceptualization, transformation of scale, simple functional and constructional problems and a sensitivity to context. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.
Course usually offered summer term only
Activity: Studio
2 Course Units

ARCH 501 Design Studio I
An introductory architectural design studio through which students develop critical, analytical and speculative design abilities in architecture. Students develop representational techniques for the analysis of social and cultural constructs, and formulate propositions for situating built form in the arena of the urban and suburban environment. The studio initiates innovation through a sequence of projects, spatial models and rule sets that introduce each student to rule-based design processes—in which a reversal of expectations leads to the creation of novel spaces and structures. It introduces computation, geometric techniques, and digital fabrication. Projects explore the formation of space in relation to the body, and the developments of small scale public programs.
Course usually offered in fall term
Corequisite: ARCH 521
Activity: Studio
2 Course Units

ARCH 502 Design Studio II
This studio explores urban architecture as an embodiment of cultural values. Staging, enclosure of space and tectonic definition are stressed in order to challenge students to project relevant and inventive architectural situations.
Course usually offered in spring term
Corequisite: ARCH 522
Activity: Studio
2 Course Units

ARCH 511 History and Theory I
The first of three required courses in the history and theory of architecture, this is a lecture course with discussion groups that meet weekly with teaching assistants. The course explores fundamental ideas and models of architecture that have emerged over the past three hundred years.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
ARCH 512 History and Theory II
This course traces the emergence of contemporary issues in the field by exploring the architecture of the twentieth century. Buildings, projects, and texts are situated within the historical constellation of ideas, values, and technologies that inform them through a series of close readings. Rather than presenting a parade of movements or individuals, the class introduces topics as overlaying strata, with each new issue adding greater complexity even as previous layers retain their significance. Of particular interest for the course is the relationship between architecture and the organizational regimes of modernity.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

ARCH 521 Visual Studies I
The study of analysis and projection through drawing and computer visualization
Course usually offered in fall term
Corequisite: Arch 501
Activity: Laboratory
0.5 Course Units

ARCH 522 Visual Studies II
A continuation of the study of analysis and projection through drawing and computer visualization.
Course usually offered in spring term
Corequisite: ARCH 502
Activity: Laboratory
0.5 Course Units

ARCH 531 Construction I
Lecture course exploring the basic principles of architectural technology and building construction. The course is focused on building material methods of on-site and off-site preparation, material assemblies, and the performance of materials. Topics discussed include load bearing masonry structures of small to medium size (typical row house construction), heavy and light wood frame construction, sustainable construction practices, emerging + engineered materials, and integrated building practices. The course also introduces students to Building Information Modeling (BIM) via the production of construction documents.
Course usually offered in fall term
Also Offered As: ARCH 431
Activity: Lecture
0.5 Course Units

ARCH 532 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building.
Course usually offered in spring term
Also Offered As: ARCH 432
Activity: Lecture
1 Course Unit

ARCH 535 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Course usually offered in fall term
Also Offered As: ARCH 435
Corequisite: Arch 535
Activity: Lecture
0.5 Course Units

ARCH 536 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Course usually offered in spring term
Also Offered As: ARCH 436
Corequisite: Arch 536
Activity: Lecture
0.5 Course Units

ARCH 601 Design Studio III
In this studio, students engage architecture in its role as a cultural agent and examine the way buildings establish and organize dynamic relationships between site, program and material. The design of a complex building of approximately 50,000 SF provides the pedagogical focus for this research. Students extend skills in geometrical organization, site analysis and building massing/orientation to relate to program organization, circulation and egress, building systems and materials. The conceptual focus centered on the program of dwelling and how this program can be employed to develop and promote dynamic relationships and conditions through time, both within the building and between the building and the context. Through research and experimentation students integrate ecological processes into their design methodology to support design innovations in the building's structure, its construction assemblies, environmental systems, and materials. Students work towards a high level of design resolution and visual representation, including the articulation of the building structure and its material assembly/enclosure.
Course usually offered in fall term
Also Offered As: ARCH 621
Activity: Studio
2 Course Units

ARCH 602 Design Studio IV
This studio enables students to develop and resolve the design of a building in terms of program, organization, construction and the integration of structures, enclosure and environmental systems as well as life safety issues. Students select from a range of individually-directed studios within this overall framework. Each instructor develops a different approach and project for their section of this studio. Studios incorporate the expertise of external consultants in advanced areas of technology, engineering and manufacturing.
Course usually offered in spring term
Activity: Studio
2 Course Units
ARCH 611 History and Theory III
This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ARCH 621 Visual Studies III
The final of the Visual Studies half-credit courses. Drawings are explored as visual repositories of data from which information can be gleaned, geometries tested, designs refined and transmitted. Salient strengths of various digital media programs are identified and developed through assignments that address the specific intentions and challenges of the design studio project.
Course usually offered in fall term
Corequisite: Arch 601
Activity: Laboratory
0.5 Course Units

ARCH 631 Technology Case Studies I
A study of the active integration of various building systems in exemplary architectural projects. To deepen students' understanding of the process of building, the course compares the process of design and construction in buildings of similar type. The course brings forward the nature of the relationship between architectural design and engineering systems, and highlights the crucial communication skills required by both the architect and the engineer.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

ARCH 634 Environmental Systems II Lab
Considers the environmental systems of larger, more complex buildings. Contemporary buildings are characterized by the use of systems such as ventilation, heating, cooling, dehumidification, lighting, communications, and controls that not only have their own demands, but interact dynamically with one another. Their relationship to the classic architectural questions about building size and shape are even more complex. With the introduction of sophisticated feedback and control systems, architects are faced with conditions that are virtually animate and coextensive at many scales with the natural and man-made environments in which they are placed.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

ARCH 636 Material Formations
Material Formations introduces robotic production and material dynamics as active agents in design rationalization and expression. The course investigates opportunities for designers to synthesize multiple performance criteria within architecture. Theory, Case Studies and practical tutorials will focus on their incorporation of analytical, simulation, generative computation and robot fabrication concerns within design. While production is traditionally viewed as an explicit and final act of execution, the course explores the potential for all aspects of building production and use to participate within the creative design process, potentially producing performance and affect. Students will develop skills and experience in computer programming, physics-based simulation, and robot motion planning. A design research project will be undertaken through a number of discrete assignments that require the synthesis of structural or performance along with material and robotic production constraints. The course will explore design as the outcome of materially formative processed of computation and production. Structure: the course will commence with weekly lectures and computer-based tutorials, and culminate in a series of intensive incremental learning, and prepare groups to work on a final assignment which involves the robotic fabrication of a small design prototype.
Course usually offered in spring term

1 Course Unit

ARCH 698 Architectural Association (AA), London
An advanced Architectural Design Studio taught by Homa Farjadi in London at the Architectural Association's School of Architecture. Topics engage aspects of urban life and urban form in London, and vary from year to year. During the fifth term of the Master of Architecture program, up to fifteen students a year may enroll for the semester abroad program in London, England. This is coordinated by Prof. Homa Farjadi and is housed at the Architectural Association (AA), located on Bedford Square in the heart of Bloomsbury. Students enroll in a special design studio, ARCH 702, taught by Prof. Farjadi, and in two elective courses offered by the faculty at the AA.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ARCH 701 Design Studio V
A set of Advanced Architectural Design studios are offered from which students select through a lottery. Topics and sites vary by instructor. One term course offered either term
Also Offered As: LARP 701
Activity: Studio
2 Course Units

ARCH 703 Advanced Architectural Design Studio
An Advanced Architectural Design Studio specifically tailored to post-professional students. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.
Course usually offered in fall term
Activity: Studio
2 Course Units
ARCH 704 Advanced Design: Research Studio
In the final semester of the program, students select from three options:
1) An elective design studio, selected from among the advanced
architectural design studios offered by the Department of Architecture;
2) a research studio, the exploration of a topic or theme established
by an individual faculty member or group of faculty members; or
3) an independent thesis, the exploration of a topic or theme under the
supervision of a thesis advisor.
Course usually offered in spring term
Also Offered As: CPLN 701
Activity: Studio
2 Course Units

ARCH 706 Independent Thesis
In the final semester of the program, students select from three options;
1) An elective design studio, selected from among the advanced
architectural design studios offered by the Department of Architecture;
2) a research studio, the exploration of a topic or theme established
by an individual faculty member or group of faculty members; or
3) an independent thesis, the exploration of a topic or theme under the
supervision of a thesis advisor.
Course usually offered in spring term
Activity: Independent Study
2 Course Units

ARCH 708 Environmental Design Studio
An advanced design studio for the MEBD program that synthesizes
the concepts and techniques of environmental building design. Topics
and materials for the studio are developed in Arch 752: MEBD Research
Seminar, and summarized in a research report at the end of studio.
Course usually offered summer term only
Prerequisites: ARCH-751, ARCH-752, ARCH-753
Corequisite: ARCH-754
Activity: Studio
2 Course Units

ARCH 709 Environmental Building Design Research Studio
Architecture is a process of discovery, of deciding what to work on, before
it ever becomes a matter of design (disegno, drawing). For environmental
building design, the process of discovery is even more profound, involving
issues of resource consumption, modes of living and working, and of
ecological interconnection that have to be explored before questions of
performance can even be addressed. This design studio uses research
at multiple scales to identify the topic of the studio, then student teams
develop design for buildings of maximum (ecological) power.
Course usually offered in fall term
Prerequisites: ARCH-751, ARCH-752, ARCH-753 and ARCH-708
Activity: Studio
2 Course Units

ARCH 710 Contemporary Theory 1989-Present
A chronological overview of the approaches and attitudes adopted by
architects, theorists and inter-disciplinary writers from 1993- today that
have helped shape the current discourse of architecture. This course
will introduce and contextualize key projects, and polemics over the
last 25 years. Central themes in this course include the impact of digital
technologies and methods of design, production and materiality. These
are explored through texts, movements, projects and buildings that
help form an overview that has shaped the contemporary condition
that we live in. There have been a myriad of different approaches and
through a select set of readings and lectures students will be exposed
to crucial texts, projects and buildings making students versatile
and knowledgeable in the important concepts that shape our current
discourse. A focus will be the organization, configuration and articulation
of buildings and the conceptual and cultural arguments they are
associated. Formal, organizational and material characteristics of this
period will be explored. This class will develop students’ knowledge
and provide a platform from which they can continue the discussions
surrounding architectural thought and practice. The students will learn
to communicate their ideas verbally and in writing. Contemporary topics
in architecture theory and projects are introduced in a weekly lecture
format critical to the shaping of our discipline today. A weekly recitation
session allows students to engage with the readings critically in the
subject matter. A mid-term and final paper are required to pass this class.
(Notes to be covered: Seminal projects and buildings in the last 25 years,
situating the architects work in a culture of debate and discourse
identifying the important readings surrounding each building/project.)
This course is a requirement of the MSD-AAD curriculum.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

ARCH 714 Museum as Site: Critique, Intervention and Production
In this course, we will take the museum as a site for critique, invention,
and production. As architecture, cultural institution, and site of
performance, the museum offers many relevant opportunities. Students
will visit, analyze, and discuss a number of local exhibitions and produce
their own intervention in individual or group projects. Exhibition design,
design of museum, the process of curating, producing artworks ranging
from paintings to installation and performance, as well as attention to
conservation, installation, museum education, and the logistics and
economics of exhibitions will be discussed on site and in seminar. These
topics and others will be open for students to engage as part of their own
creative work produced for the class and an online exhibition.
Course usually offered in spring term
Activity: Seminar
1 Course Unit
ARCH 720 Visual Literacy and its Culture
The digital turn in the creative fields resulted in profound transformations of techniques, aesthetics and underlying concepts in the development of contemporary visual culture. The dissemination and consumption of information through images through all types of media platforms influence and redefine (for better or worse) all aspects of our culture and reality. It is vital to develop a deep knowledge of the current visual concepts and techniques in arts, photography, cinema, product design and architecture to claim a critical stance through which we can positively contribute to the evolution of contemporary culture. The discipline of architecture has been deeply influenced by the digital shift in modes of design and visualization which yielded a wide array of directions within the architectural discourse, especially with questions and problems regarding representation. One clear outcome of this transformational period is the diversity of new representational strategies to seek alternative modes of visualization. It is clear that no one representational medium can be defined as the locus of architectural thought and architecture, as a cultural practice, can no longer be defined through the output of a single medium. The reality of our discipline is that we work through collective mediums and conventions of drawings, models, images, simulations, texts, prototypes and buildings to visualize architectural concepts. These mediums all require degrees of expertise in techniques that are necessary for their execution: they all involve conceptual depth that define their disciplinary positions; they all require translations across each other to enable subjective work-flows; they all require aesthetic attitudes to influence the development of visual culture in architecture. This course will introduce the AAD majors to contemporary topics of visualization in arts, photography, cinema and architecture. They will explore multiple mediums of representation to help them gain the vital visual literacy to excel in the program. Students will be introduced to discursive background and contemporary concepts of line drawing, fabricated object and constructed image as they work through 3 distinct projects during the semester. Each exercise will be initiated by a topical lecture and be followed by weekly pin ups to advance student projects. (Topics to be covered: Discourse of Contemporary Line Drawing, Multi-part 3D Printing, Vacuumform/CNC Milling, Digital/Analog Surface Articulation, Rendering, Abstraction and Realism, Montage/Collage/Photorealism)
Course usually offered in spring term
Activity: Lecture
1 Course Unit

ARCH 721 Designing Smart Objects for Play and Learning
Today's children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software-hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.
Course usually offered in fall term
Also Offered As: IPD 521
Activity: Seminar
1 Course Unit

ARCH 724 Technology in Design
The aim of this course is to understand the new medium of architecture within the format of a research seminar. The subject matter of new media is to be examined and placed in a disciplinary trajectory of building design and construction technology that adapts to material and digital discoveries. We will also build prototype with the new media, and establish a disciplinary knowledge for ourselves. The seminar is interested in testing the architecture-machine relationship, moving away from architecture that looks like machines into architecture that behaves like machines: An intelligence (based on the conceptual premise of a project and in the design of a system), as part of a process (related to the generative real of architecture) and as the object itself and its embedded intelligence.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 725 Design Thinking
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today's products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers' tools - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implemtatable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process.
Course usually offered in fall term
Also Offered As: IPD 572
Activity: Seminar
1 Course Unit
ARCH 726 Contemporary Furniture Design
This course provides a platform, in the form of furniture, to execute and deploy architectural & engineering principles. It will be conducted as a seminar and workshop, and will introduce students to a variety of design methodologies that are unique to product design. The course will engage in many of the considerations that are affiliated with CAD/CAM production, the appropriate and innovative use of materials, and human factors. Students conduct case studies and research into industrial design processes, and will adapt these processes into techniques for designing a chair. Throughout the semester, students will experience first hand structural and material behavior, and understand ergonomic constraints by testing their design at different scales. The process will include: the production of a final design, its detailing, prototype development, Color/Material/Finishes (CMF), design for Computer Aided Manufacturing (CAM), the possibility of mass customization, research of materials and fabrication methods, optimization studies, Computer Aided Design (CAD), model making, furniture case studies, and a site visit to a major furniture manufacturer.
Course usually offered in spring term
Also Offered As: IPD 526
Activity: Seminar
1 Course Unit

ARCH 727 Industrial Design
Industrial design (ID) is the professional service of creating and developing concepts and specifications that optimize the function and appearance of products and systems for the mutual benefit of both user and manufacturer. Industrial designers develop these concepts and specifications through collection, analysis and synthesis of user needs data guided by the special requirements of the client or manufacturer. They are trained to prepare clear and concise recommendations through drawings, models and verbal descriptions. The profession has evolved to take its appropriate place alongside Engineering and Marketing as one of the cornerstones of Integrated Product Design teams. The core of Industrial Design’s knowledge base is a mixture of fine arts, commercial arts and applied sciences utilized with a set of priorities that are firstly on the needs of the end user and functionality, then the market and manufacturing criteria. This course will provide an overview and understanding of the theories, thought processes and methodologies employed in the daily practice of Industrial Design. This includes understanding of ethnographic research and methodologies, product problem solving, creative visual communication, human factors / ergonomics application and formal and surface development in product scale. This course will not enable one to become an industrial designer but will enable one to understand and appreciate what industrial design does, what it can contribute to society and why it is so much fun.
One-term course offered either term
Also Offered As: IPD 527
Activity: Lecture
1 Course Unit

ARCH 728 Design of Contemporary Products: Mass Customization
Personalization is quickly becoming the norm for mass production in a variety of consumer-centric industries. From retail to food, the idea of designing and making custom-made products tailored to fit one’s lifestyle will be our exploration. Utilizing digital design innovations, we are able to incubate ideas, prototype, test and be entrepreneurial in design to create these individualized products. Cues from these industries will be used to shift both cultural and experiential product design from a regional discovery to a global focus. This course will embrace digital design and utilize its engagement with manufacturing solutions for a physical output. Through research and a series of design exercises, the approach will be built upon several strategies including adaptability, materiality, fabrication, modularity, and human-centric design. The final project will interpret the research and result in the creation of a design strategy for a mass customized product or system. This course will explore product design solutions through a combination of physical and digital design methods. Beginning with an examination of case studies, students will gain a sense of the breadth of product and interaction design practice as it applies to smart objects. Through a series of lectures and hands-on studio exercises, students will explore all aspects of smart object design including expressive behaviors (light, sound and movement), interaction systems, ergonomics, data networks and contexts of use. The course will culminate in a final project that considers all aspects of smart object design within the context of a larger theme.
Course usually offered in spring term
Also Offered As: IPD 528
Activity: Seminar
1 Course Unit

ARCH 730 Techniques, Morphology, and Detailing
The course will focus on design, morphology detailing, and the construction of a pavilion on a chosen site. The course will develop through hands-on workshops and will focus on acquiring knowledge through making, (Technë), understanding the morphological transformation of a given geometric packing, and building using readily available materials. The process consists of building and testing physical models that simulate the actual pavilion in order to ultimately realize the desired design. The second half of the semester will focus on using lightweight construction materials to fabricate the pavilion’s actual components, including structural elements, molded components, and joints, which are required for the pavilion’s final assembly. Additionally, students will learn to organize design and fabrication teams, control design and production schedules, and work with a set budget, which requires keeping track of construction costs and forecasting required procurements, including material quantities takeoff, ordering materials and scheduling deliveries.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
ARCH 731 Experiments in Structures
This course studies the relationships between geometric space and those structural systems that amplify tension. Experiments using the hand (touch and force) in coordination with the eye (sight and geometry) will be done during the construction and observation of physical models. Verbal, mathematical and computer models are secondary to the reality of the physical model. However these models will be used to give dimension and document the experiments. Team reports will serve as interim and final examinations. In typology, masonry structures in compression (e.g., vault and dome) correlate with "Classical" space, and steel or reinforced concrete structures in flexure (e.g., frame, slab and column) with "Modernist" space. We seek the spatial correlates to tensile systems of both textiles (woven or braided fabrics where both warp and weft are tensile), and baskets (where the warp is tensile and the weft is compressive). In addition to the experiments, we will examine Le Ricolais' structural models held by the Architectural Archives.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 732 Technology Designated Elective
Several sections are offered from which students make a selection. This year's selections include: Deployable Structures, Performance and Design, Detailed Design Studies, Daylighting, Principles of Digifab, Matter and Energy, Material and Structural Intelligence.
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: Please note: MSD-AAD students in their first semester are not permitted to enroll in any ARCH-732 courses.

ARCH 733 Building Product Design
As Craig Vogel notes in The Design of Things to Come, "we are in a new economic age that is in need of a new renaissance in product development, one that leverages multiple minds working in concert." With this mindset, this interdisciplinary workshop guides students through the product design process from design brief to concept generation and prototype development in one semester. Working first-hand with Transwall, a leading manufacturer of demountable wall systems, to focus on a specific product need. The design opportunity looks for the next generation of pre-manufactured wall systems; getting away from field construction walls and looking at critical issues of mass-produced wall systems: flexibility, mobility, structural stability, acoustics, transparency/opacity and operability. During the workshop, students will explore the context that creates the unique need for a new product and have an opportunity to conceptualize their ideas through sketches, digital modeling and prototype development.
Taught by: Faculty

Also Offered As: IPD 530
Prerequisite: ARCH 403/IPD 503 or ARCH major
Activity: Lecture
1 Course Unit

ARCH 734 Ecological Architecture - Contemporary Practices
Architecture is an inherently exploitative act - we take resources from the earthhand produce waste and pollution when we construct and operate buildings. As global citizens, we have an ethical responsibility to minimize these negative impacts. As creative professionals, however, we have a unique ability to go farther than simply being "less bad." We are learning to design in ways that can help heal the damage and regenerate our environment. This course explores these evolving approaches to design - from neo-indigenous to eco-tech to LEED to biomimicry to living buildings. Taught by a practicing architect with many years of experience designing green buildings, the course also features guest lecturers from complementary fields - landscape architects, hydrologists, recycling contractors and materials specialists. Coursework includes in-class discussion, short essays and longer research projects.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 736 Technology Designated Elective
Several sections are offered from which students make a selection. Course usually offered in spring term
Activity: Seminar
0.5 Course Units

ARCH 737 Semi-Fictional Realms
The pursuit of immersive digital experiences has long been a goal of the computing industry. Early wearable displays designed in the 1960s depicted simple three dimensional graphics in ways that had never been seen before. Through trial and error, digital pioneers reframed the relationship between user and machine, and over the last five decades, have made strides that advanced both the input and output mechanisms we are so comfortable with today. As a field, architecture has been reliant on these advancements to design and document buildings, but these tools still leave the architect removed from the physicality of the design, with their work depicted as 2D lines or 3D planes alone. This course will study the evolutionary advancements made that now allow us to fully inhabit digital worlds through Virtual Reality. Using the HTC Vive and Unreal Engine, students will generate immersive, photorealistic models of unbuilt architectural works and explore digital/physical interactivity. From the terraces of Paul Rudolph's Lower Manhattan Expressway to Boulevar d’Ennervall’s Newton, the goal of this course is to breathe new life into places and spaces that have, until this time, never been built or occupied.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 738 The Modern House: Technology Then and Now
In the current age of new fabrication methodologies, methods are emerging for the conception and design of the contemporary house which have radical potential for enclosure, habitation and practices of daily life. This course begins by examining the canonical houses of the original avant-garde -Adolf Loos, Frank Lloyd Wright, Le Corbusier, Mies van der Rohe and Alvar Aalto -on the premise that their houses were working manifestos for rethinking space, form and indeed ideas of life itself -all of which were prompted by new concepts of construction. From this spectrum of issues, contemporary houses and contemporary methods and materials will be studied extensively to develop equally new ideas between matter and quotidian life. As the primary task of the course, students will work in teams to develop highly detailed constructional proposals for a portion of a speculative home.
Course usually offered in spring term
Activity: Seminar
1 Course Unit
ARCH 739 New Approaches to an Architecture of Health
Health care is taking on a new role in our society - with a refocusing from episodic care for those who are ill or symptomatic to providing life-long care geared towards maintaining wellness. These changes are evident across numerous areas of design, from wearable technologies that track and analyze, to large scale building initiatives that aim to create healthier environments and improve lives through strategic planning initiatives. A concrete, physical representation of this paradigm shift can be found within the hospital building itself and in the new manner in which hospitals are looking to serve their patients and care for their clinicians. Simultaneously both public and private spaces, hospitals are complex systems in which sickness, health, hospitality, technology, emergency, and community share space and compete for resource. In order to frame our present day understanding of the role of architecture (and design) in fostering health for individuals and within communities, this seminar will begin with an exploration of the historical and contemporary perspectives on the role of the architect and built environment on health. (Parallels between design and our ever-changing understanding of the biological, social, and environmental causes of sickness and disease will also be explored.) During this conversation, students will read articles and study recently constructed projects in order to examine the ways in which the architects approached these topics through built form. Following from this foundation, students will craft arguments for a new approach to the individual, the community, health, and architecture through a written response and architecturally designed scenario that argues for their perspective on how architecture can and should shape the health of those who inhabit it. Throughout the course, students will engage in weekly readings (and discussions) of critical texts exploring ideas around the role and impact of architecture on health. Various content experts will be included in the course to provide additional insights into key areas of theory and practice in order to lend additional perspectives and ground the conversation.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 741 Architecture Design Innovation
The mastery of techniques, whether in design, production or both, does not necessarily yield great architecture. As we all know, the most advanced techniques can still yield average designs. Architects are becoming increasingly adept at producing complexity & integrating digital design and fabrication techniques into their design process - yet there are few truly elegant projects. Only certain projects that are sophisticated at the level of technique achieve elegance. This seminar explores some of the instances in which designers are able to move beyond technique, by commanding them to such a degree as to achieve elegant aesthetics within the formal development of projects.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 743 Form and Algorithm
The critical parameter will be to develop the potential beyond finite forms of explicit and parametric modeling towards non-linear algorithmic processes. We will seek novel patterns of organization, structure, and articulation as architectural expressions within the emergent properties of feedback loops and rule-based systems. This seminar will accommodate both introductory and advanced levels. No previous scripting experience is necessary. It will consist of a series of introductory sessions, obligatory intensive workshops, lectures followed by suggested readings, and will gradually focus on individual projects. Students will be encouraged to investigate the limits of algorithmic design both theoretically and in practice through a scripting environment.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 744 Postdigital Craft
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined.
Course usually offered in spring term
Also Offered As: IPD 544
Activity: Seminar
1 Course Unit

ARCH 746 Cinema and Architecture in Translation
Cinema and Architecture in Translation is a seminar that will survey key cinematic moments and techniques within the history of film and find new intersections between architecture and narratives. The focus will be on the relevance of mise-en-scene, the background and building figures of architecture and future speculations of the city yet in relation to narrative dynamics. One of the challenges is to consider techniques that will affect both conceptualization and the production of spatial manifestations using potent visual platforms. Current pre and post-production techniques in film making methods are converging with architectural digital representation. This is an opportunity that provides fertile ground for architects to re-examine the 'digital' in a variety of scales in relation to impactful narratives and visualizations. These tools, specifically the technique of 'matte-painting' will be explored in this course. There is a rich history in constructing images, speculative worlds and scenes for the film industry. We will explore the parallels between the tools and strategies of cinematic visualization as it relates to advanced architectural image making. Students will have the opportunity to analyze filmic scene making, learn advanced representation and techniques in matte painting and zbrush. Above all this course will engage students in the conceptual as well as practical complementarities of architecture and cinema, while watching some of the best films ever made and the most provocative and insightful books to help process them. An important aspect of this course will be to explore the differences between "real" architecture and the cinematic architecture. The expansive Space and Time in which cinematic architecture is located, creates an incubator where true innovated speculation can occur. This is an advanced representation course that produces 2D images and narrative texts.
Course usually offered in spring term
Activity: Seminar
1 Course Unit
ARCH 750 Parafictional Objects
This representation/design seminar explores the aesthetics of estrangement in realism through various mediums. The reality of the discipline is that architecture is a post-medium effort. Drawings, Renderings, Models, Prototypes, Computations, Simulations, Texts, and Buildings are all put forward by architects as a speculative proposal for the reality of the future. Students will explore the reconfiguration of a "found object" in multiple mediums and represent parafictional scenarios in various techniques of realism. At a time when rendering engines enable the production of hyper-realistic images within the discipline without any critical representational agenda, it has become ever more imperative to rigorously speculate on realism.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 751 Ecology, Technology, and Design
This course will examine the ecological nature of design at a range of scales, from the most intimate aspects of product design to the largest infrastructures, from the use of water in bathroom to the flow of traffic on the highway. It is a first principle of ecological design that everything is connected, and that activities at one scale can have quite different effects at other scales, so the immediate goal of the course will be to identify useful and characteristic modes of analyzing the systematic, ecological nature of design work, from the concept of the ecological footprint to market share. The course will also draw on the history and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ARCH 752 MEBD Research Seminar
Directed student research of selected topics in environmental building design. These topics will be further explored in ARCH 708: MEBD Studio and will provide the basis for the research documents developed with each student's design project. Course work will include lectures, discussions, weekly readings, and in-class exercises. Each student will be required to make a presentation and submit a research report.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 753 Building Performance Simulation
The course provides students with an understanding of building design simulation methods, hands-on experience in using computer simulation models, and exploration of the technologies, underlying principles, and potential applications of simulation tools in architecture. Classroom lecturers are given each week, with a series of analysis projects to provide students with hands-on experience using computer models. This course is required and reserved for MEBD students.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ARCH 754 Performance Design Workshop
The workshop applies simulation and diagramming techniques to a series of discrete design projects at different scales. The emphasis is on refinement and optimization of performance based building design. Performance analysis techniques can provide enormous amounts of information to support the design process, acting as feedback mechanisms for improved performance, but careful interpretation and implementation are required to achieve better buildings. Energy, lighting, and air flow are the three main domains covered in the workshop. Students will learn how to utilize domain tools at an advanced level, and utilize them as applications to examine the environmental performance of existing buildings. Using the results of analytical techniques, the students will develop high-performance design strategies in all three domains.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 762 Design and Development
This course provides an introduction to the relationship between architectural design and real estate development. Following a discussion of fundamentals, examples focus on commercial building types, and illustrate how architectural design can contribute to real estate development. Topics include housing design commercial buildings, adaptive reuse, downtown development, mixed-use projects, and planned communities. The course consists of lectures, reading assignments, short essays, a group project, and a mid-term test. Invited lecturers include architects and real estate developers. Readings consist of a Bulpack available from Whaton Repographics. There is one course text: Witold Rybczynski, "Last Harvest."
Course usually offered in spring term
Also Offered As: CPLN 643

0 Course Units

ARCH 792 ARCH Summer Institute: Advanced Architectural Design Digital Workshop
This is a non-credit course for entering Master of Science in Design: Advanced Architectural Design students. The Digital Methods workshop provides a comprehensive introduction to four elements critical to the workflow of the graduate studios at PennDesign: 3D modeling, scripting, visualization and fabrication. Short daily lectures situating digital technologies in contemporary design practice are followed by hands-on tutorials in Maya and Rhinoceros. The first half of the workshop provides an operative knowledge of the many geometry types, modeling techniques, scripting languages and simulation tools available for studio work. Visualization techniques are also introduced, and students will learn to efficiently produce presentation-quality renderings, animations and technical line drawings from digital models. Students also learn protocols for transferring data between various design software packages and how to create data compatible with PennDesign’s digital fabrication equipment. Course fee: $750.00 Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.
Course usually offered summer term only
Activity: Studio
0 Course Units

ARCH 793 ARCH Summer Institute: History of Architecture
This is a non-credit course for entering Master of Architecture students. The course will cover western architecture from ancient Egypt to the modern age and will satisfy the history pre-requisite condition for matriculation in the fall. Course fee: $750.00. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.
Course usually offered summer term only
Activity: Lecture
0 Course Units

ARCH 794 ARCH Summer Institute: Physics for Architects
This is a non-credit course for entering Master of Architecture students. The course will cover the following: mechanics, heat, light, sound and electricity. The course will satisfy the physics pre-requisite condition for matriculation in the fall. Course fee: $750.00. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.
Course usually offered summer term only
Activity: Lecture
0 Course Units

ARCH 811 Theories of Architecture
The purpose of this course is to provide to students who are embarking on careers in teaching and scholarship in architecture a re-introduction to some of the principal issues and writings of the architectural theory, as they developed historically from antiquity to the present. In addition to introducing recurring themes and primary texts, this course aims to help students develop the practices that are typical of scholarship, the forms and habits of scholarly inquiry. It is a required course for all incoming Ph.D. and M.S. students.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ARCH 812 Field Research
First year Ph.D. and M.S. students will use this course to register for a research elective in their field of study. Courses to be taken will be selected from a list of electives offered by members of the Graduate Group of Architecture, typically the seminars offered by those faculty at the Masters level. At the outset of the course Ph.D. and M.S. students will discuss and decide with the professor the readings, research, and writings that will be appropriate for the course, given the student’s field of study.
Course usually offered in spring term
Activity: Independent Study
1 Course Unit

ARCH 813 Qualifying Research
This is an independent study course for first year Ph.D. and M.S. students, supervised by a member of the Graduate Group in Architecture. A course of readings and advisor sessions throughout the semester will result in an independent study paper, which will also be used as the student’s qualifying paper for the Qualifying Examination. This research paper will be prepared as if for scholarly publication.
Course usually offered in spring term
Activity: Independent Study
1 Course Unit
ARCH 814 The Concept of an Avant-Garde
No historian of architecture has written as intensely about the contradictions of architecture in late-modern society or reflected as deeply on the resulting problems and tasks of architectural historiography as Manfredo Tafuri (1935-1994). For many, the Italian historian’s dismissal of “hopes in design” under conditions of advanced capitalism produced a disciplinary impasse. This in turn led to a call to oublier Tafuri - to move beyond his pessimistic and lacerating stance. The seminar will undertake a close reading of one of Tafuri’s most complexly conceived and richly elaborated books, The Sphere and the Labyrinth: Avant-Gardes and Architecture form Piranesi to the 1970s. Initially published in Italian in 1980 and translated into English in 1987, the book represents the first effort to define and historicize the concept of an avant-garde specifically in architecture. Its content centers on the radical formal and urban experiments of the first three decades of the twentieth century. Yet Tafuri surprisingly begins his account with the eighteenth-century inventions of Piranesi, and he concludes with an examination of the “neo-avant-garde” of his own day. In addition to traversing The Sphere and the Labyrinth chapter by chapter - starting with the extraordinary methodological introduction, “The Historical Project”- we shall also read a number of primary and secondary sources on the historical contexts under discussion and consider a number of important intertexts that shed light on Tafuri’s position. The objectives of the course are at once historical and historiographic; we shall be concerned both with actual events and how they have been written into history. Finally, we shall reassess the role of an avant-garde in architecture and compare Tafuri’s concepion to that advanced in other disciplines. Is the concept of an avant-garde still viable today? Or should it be consigned to the dustbin of twentieth-century ideas? Assignment for first class: read the introduction to The Sphere and the Labyrinth, pp. 1-21, “The Historical Project.” A copy of the book is on reserve at the library. Note: the book is out of print. For future classes please make every effort to purchase a used copy or obtain one via interlibrary loan. Copies of individual chapters will also be made available on our class website.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 815 Research Report
The candidate for the M.S. in Architecture degree shall prepare a research report in his or her subject of study. The topic of this report must be approved by an advisor. This report will be developed in the independent study courses, undertaken after the eight units of course work has been completed, normally in the summer semester. The purpose of these courses is to give the student an opportunity to synthesize their previous coursework at Penn. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.
Course usually offered in fall term
Activity: Independent Study
2 Course Units

ARCH 816 Advanced Topics in Architecture Culture from World War II through 2001
This seminar will be taught as an advanced section of ARCH 512. It is primarily for students who are in their first year of the PhD program in Architecture but it is open to other upper-level students with instructor permission. In addition to the weekly discussion-format seminar on Tuesday afternoons (1.5 hours), students are also expected to attend the lectures associated with ARCH 512 on Tuesday mornings (10:30-12). Assigned readings will go beyond those on the 512 syllabus to include more complex and sophisticated source material. The subject of both ARCH 512 and 811 is the evolution of the culture of architecture from World War II to the turn of the twenty-first century. Starting with the period of wartime planning and postwar reconstruction in the 1940s, we will move decade by decade up to the present century, considering the transformations of modernist culture under the impact of social, political, technological, and urban changes. We will address the challenges posed to architecture from inside as well as outside the discipline and from around the world, attending to material and ideological developments and to relations between individual protagonists and larger historical and institutional forces. Among the wide range of issues at stake are the impact of research and technology coming out of the world war; the intensifying critique of interwar functionalism and debates over monumental humanism, regionalism, history, aesthetics; the effects of suburbanization, expanded mobility, changing demographics, and environmental factors; the phenomena of consumer culture and mass media; the impact of the Cold War and decolonization; the emergence of a “global village” and its intensifying cultural exchanges; the rise of a new architectural avant-garde in the 1960s and the advent of postmodernism; plus more recent ramifications. At the level of theory and methodology, the seminar will be especially concerned with issues of periodization and documentation. We will discuss and debate the question of how “architecture culture” is produced and reproduced at particular moments in history. Seminar discussions will be focused around specific case studies, some to be determined by the instructor, the rest based on in-depth individual research products to be carried out by the members of the class. Each student will work on his or her case-study project over the course of the semester, leading to an in-class presentation and a term paper of 25 pages.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ARCH 851 Dissertation Bibliography
This course is essentially an independent study, undertaken by doctoral students in preparation for the Candidacy Examination. This course should be taken in conjunction with ARCH 852 after all other courses have been completed. Normally a member of the student’s dissertation committee supervises this course.
Two terms. student may enter either term.
Activity: Independent Study
1 Course Unit

ARCH 852 Dissertation Proposal
This course is essentially an independent study, undertaken by doctoral students in order to write the Proposal for the Dissertation. The Proposal is prepared before and defended during the Candidacy Examination. This course should be taken in conjunction with ARCH 851 after all other courses have been completed. Normally a member of the student’s dissertation committee supervises this course.
Two terms. student may enter either term.
Activity: Independent Study
1 Course Unit
ARCH 995 Dissertation
Two terms. student may enter either term.
Activity: Dissertation
1 Course Unit

ARCH 999 Independent Study
This course enables students to undertake self-directed study on a topic in Architecture, under the supervision of a faculty member. Students are required to make a proposal for the study to the Department Chair, outlining the subject and method of investigation, and confirming the course supervisor at least two weeks prior to the beginning of the semester.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Art & Archaeology of Mediterranean World (AAMW)

AAMW 401 Introduction to Greek Archaeology
An introduction to the art and archaeology of ancient Greece from the Archaic through Hellenistic periods. Topics to be considered include the formation of the Greek polis, the rising and falling fortunes of Athens and the other Greek city-states in the Classical period, and the world of Alexander the Great. Emphasis is placed on the consideration of the archaeological evidence, e.g., sculpture, painting, pottery, architecture, and other material culture. This course is part of a sequence of introductory courses (with Ages of Homer and Introduction to Roman Archaeology) on the archaeology of the Greco-Roman world. There are no prerequisites, and these courses need not be taken in a particular order.
Course not offered every year
Also Offered As: CLST 275
Activity: Lecture
1 Course Unit

AAMW 425 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In the epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome', Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antiquity 'decline', analyze habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity; we visit arts of Sasanian and Islamic empires east and south, and 'barbarian' domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just 'monumental' painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books, jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.
Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 425, CLST 425
Activity: Lecture
1 Course Unit

AAMW 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.
Taught by: Kuttner, Rose
Course not offered every year
Also Offered As: ARTH 427, CLST 427
Activity: Lecture
1 Course Unit

AAMW 428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great's Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt's defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt (Etruscan) Anatolia, the Middle East and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites. It is desirable for undergraduates to have experience of research. Of interest to students in AAMW, ARTH, ANCH, CLST, VLS, NELC, RELS and ANTH.
Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 428
Activity: Lecture
1 Course Unit

AAMW 435 Medieval Islamic Art & Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to fourteenth-century) Islamic world. Attention is paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primacy of writing. Suitable for students of literature, history, anthropology as well as art history.
Taught by: Holod
Course not offered every year
Also Offered As: ARTH 435, COML 415, NELC 489
Activity: Lecture
1 Course Unit
AAMW 509Curatorial Seminar
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and or/develop programming for exhibitions of art and visual/material culture. Spring 2015: Practiced in almost all ancient cultures, magic offered ways of managing or understanding the present, controlling supernatural agencies, and seeing the future. The objects and images associated with magical practices are rich and varied and are well represented in the University of Pennsylvania Museum. The aim of the seminar is to prepare an exhibit on magic and divination, working with the archaeological collections of the UPM, specifically the Ancient Near Eastern, Egyptian, and Mediterranean sections. It will include objects such as amulets, curse tablets, incantation bowls, and magical papyri, as well as images representing magical practices. Participating students will select and research objects and prepare wall texts for the exhibit.
Course not offered every year
Also Offered As: ARTH 501, NELC 501
Activity: Seminar
1 Course Unit

AAMW 512 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Course not offered every year
Also Offered As: ANTH 514, CLST 512
Activity: Seminar
1 Course Unit

AAMW 519 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 600 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading, reports, and discussion.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 532
Activity: Seminar
1 Course Unit

AAMW 520 Topics in Aegean Bronze Age
Topic varies. Fall 2016: Minoan and Cycladic Wall Paintings are considered a hallmark of the Aegean Bronze Age Civilization. Often, these paintings are discussed in terms of their iconography but in isolation of their archaeological contexts. In this class, we will examine both with the goal of determining what types of paintings are used in houses, palaces, defensive structures, and buildings of undetermined function, as well as examining their pictorial programs and iconographic interpretations. With the recent study of Minoan-style wall paintings in Egypt and the Ancient Near East, the question of the spread of Minoan and Cycladic techniques and motifs must also be considered, along with the archaeological contexts at these non-Aegean sites. We will have class discussions of assigned readings.
Course not offered every year
Also Offered As: ARTH 520
Activity: Seminar
1 Course Unit

AAMW 522 Topics in Ancient Iranian Art
Topic varies. Spring 2018: This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Instructors: Professors Holly Pittman (Penn), Peter Magee (Bryn Mawr College).
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 522
Activity: Seminar
1 Course Unit

AAMW 525 Topics in Greek and Roman Art
Topic varies. Fall 2018: "Roman Provincial Art" is a very active scholarly category, we test how it might be productive, sampling visual culture outside the empire's Italian heartland from the Late Republic into Late Antiquity. Rome's arts were always in dialogue with those of neighboring cultures; imperialist expansion into the Mediterranean world and beyond meant that cultural relations across many boundaries--social, ethnic, territorial--potentially became cultural politics. Of related interest are relationships between visual and material culture within the Roman world's formal boundaries, in proto-global and imperial contexts, and those of peoples along and beyond those frontiers. (In Late Antiquity some of them took up rule within the old imperial boundaries, and came to cultural terms with their new lands.) "Style" is a fraught issue: what does attributed crudeness in regional practice add up to, and what were the aims of apparently trans-Mediterranean forms of display? Do "arts" engage identity formation, enforced or discrepant viewing?
Taught by: Kuttner
Course not offered every year
Also Offered As: ARTH 525, CLST 521
Activity: Seminar
1 Course Unit
AAMW 526 Material & Methods in Mediterranean Archaeology
This course is intended to familiarize new graduate students with the collections of the University of Pennsylvania Museum of Archaeology and Anthropology and the wide range of scholarly interests and approaches used by faculty at Penn and neighboring institutions, as well as to provide an introduction to archaeological methods and theory in a Mediterranean context. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into five sections: Introduction to the Mediterranean Section; Collections; Method and Theory in Mediterranean Archaeology; Museum Work; and Ethics. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.
Taught by: Tartaron
Course usually offered in fall term
Also Offered As: CLST 526
Activity: Seminar
1 Course Unit

AAMW 529 Topics in Roman Architecture
Topic varies. Spring 2018: This seminar offers a critical assessment of digital Roman architecture studies. What has been accomplished and learned over the last generation since the Digital Turn, and where is the field of Roman architecture being taken? Points of focus include several landmark case studies, such as digital reconstructions of the city of ancient Rome, and threatened cultural heritage sites in Syria. The course will involve readings of significant texts, in-class discussions and presentations lead by the seminar’s participants, and testing and critiquing of a limited set of digital tools.
Taught by: Stinson
Course not offered every year
Also Offered As: ARTH 529
Activity: Seminar
1 Course Unit

AAMW 530 Topics in Byzantine Art
Topic varies.
Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 532
Activity: Seminar
1 Course Unit

AAMW 531 Later Islamic Art and Architecture
Istanbul, Samarkand, Isfahan, Cairo and Delhi as major centers of art production in the fourteenth to seventeenth centuries. Attention is given to urban and architectural achievement as well as to the key monuments of painting and metalwork. The visual environment of the "gunpowder empires" is discussed.
Taught by: Holod
Course not offered every year
Also Offered As: ARTH 436, RELS 440
Activity: Lecture
1 Course Unit

AAMW 533 Topography and Monuments of Ancient Rome
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Taught by: Rose
Course not offered every year
Also Offered As: CLST 328, CLST 533
Activity: Seminar
1 Course Unit

AAMW 534 Problems in Greek and Roman History: Archaic and Classical
This seminar is designed to introduce students to the major issues and problems in the early history of Ancient Greece, from approximately 776 BC until the reign of Alexander the Great nearly four hundred and fifty years later. A number of these issues have been the subject of academic investigation for decades: the historicity of Homeric society, the origins of democracy, the reforms of Kleisthenes, the population of Athens, for example. The investigation of many of these problems, however, has received fresh impetus from newer approaches: demographic studies of the Aegean islands, the dating of 5th century inscriptions, the study of Solons poetry have all yielded new insights and transformed our understanding of Greek culture and history. In this seminar we will explore many older questions from newer perspectives, with attention to such recent topics as gender, ethnicity and subaltern studies. The result is a view of Greece that is both more familiar and yet equally more alien.
Taught by: McInerney
Course not offered every year
Also Offered As: ANCH 535
Activity: Seminar
1 Course Unit

AAMW 536 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordion, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months.
Taught by: Brian Rose
Course not offered every year
Also Offered As: ARTH 421, CLST 336, NELC 121, NELC 521
Activity: Lecture
1 Course Unit
AMW 537 Topics in Art of Iran
Topic varies. Spring 2018: The pro-seminar will examine aspects of continuity and rupture in the visual culture(s) of the Iranian world. This is an opportunity for students whose preparations may be centered on other contiguous periods or regions to consider the manner in which Middle Asia and its rich visual cultures contributed to the forging of Late Antique and medieval Islamic visual expressions of kingship, territory and religion. The seminar will consider a range of materials from archaeological sites, rock reliefs and wall paintings to textiles, silver vessels, coins and ceramics, with special attention to materials excavated or otherwise held by the Penn Museum.
Taught by: Holod, Kuttner
Course not offered every year
Also Offered As: ANCH 527, ARTH 537, NELC 617
Activity: Seminar
1 Course Unit

AMW 539 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: plants as foods and intoxicating beverages; medicines, poisons, and psychoactive plants; plants as building supplies and textiles; wild plant collection, and the origins of plant domestication. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.
Taught by: Chantel White
Course not offered every year
Also Offered As: ANTH 533, CLST 543, NELC 585
Activity: Seminar
1 Course Unit

AMW 540 Topics in Medieval Art
Topic varies. Spring 2018: The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpetive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack of abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object oriented knowledge of ivory artefacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.
Taught by: Guerin
One term course offered either term
Also Offered As: AFRC 538, ARTH 540
Activity: Seminar
1 Course Unit

AMW 542 Ancient Seafaring
This course explores ships, seafaring, and seafarers of the ancient Greek World from the Bronze Age (Minoans and Mycenaeans) to the Age of Alexander (Hellenistic period). Sources include shipwrecks and related artifacts, artistic representations, and ancient documents and literature. The emphasis is not so much on the technical aspects of shipbuilding and navigation as on the ways that seafaring shaped Greek history and connected the Greeks to a wider world through trade, warfare, colonization, and adventure.
Taught by: Tartaron
Course not offered every year
Also Offered As: CLST 340
Activity: Lecture
1 Course Unit

AMW 546 Museum Internship
The Museum Internship in the spring consists of a research project with Penn Museum collections based on a proposal designed and approved during the fall AAMW Proseminar (AMW 526). It is offered to, and is a requirement for, first-year AAMW graduate students only.
Course usually offered in spring term
Prerequisite: AMW 526 Material & Methods in Mediterranean Archaeology
Activity: Independent Study
1 Course Unit

AMW 552 Archaeometallurgy Seminar
This course is designed to provide an in-depth analysis of archaeological metals. Topics to be discussed include: exploitation of ore and its transformation to metal in ancient times, distribution of metal as a raw materials, provenance studies, development and organization of early metallurgy, and interdisciplinary investigations of metals and related artifacts like slag and crucibles. Students will become familiar with the full spectrum of analytical procedures, ranging from microscopy for materials characterization to mass spectrometry for geochemical fingerprinting, and will work on individual research projects analyzing archaeological objects following the analytical methodology of archaeometallurgy.
Taught by: Moritz Jansen
Also Offered As: ANTH 552, CLST 552, NELC 587
Activity: Seminar
1 Course Unit

AMW 556 Becoming a Professional Archaeologist
This course (cross-listed as ANTH556) is designed to prepare graduate students for a career in academic archaeology. Topics to be covered include project research design (including logistical planning), acquiring funding (proposal writing), managing grants (including budget planning and reconciliation), publishing, and preparing for entering the job market (writing cover letters and CVs). Students are also encouraged to suggest further topics of interest as the semester goes on. The final project will be the development of a NSF grant proposal, which will be presented and critiqued in stages throughout the semester, and which can serve as the basis for later submission. While much of the focus is on archaeology, students in other disciplines, especially those involving field research, will also benefit.
Taught by: Dibble
Course usually offered in spring term
Also Offered As: ANTH 556
Prerequisites: ANTH 600 and one archaeology area course or permission of instructor
Activity: Seminar
1 Course Unit
AAMW 557 Seminar in Archaeological Theory and Method: Archaeology of Landscapes
Topic varies.
Course not offered every year
Also Offered As: ANTH 557, LALS 557
Activity: Seminar
1 Course Unit

AAMW 562 Introduction to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets.
The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: Cobb
Also Offered As: ANTH 362, ANTH 562, CLST 362, CLST 562, NELC 362
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1 Course Unit
Notes: Please note that this is a lecture course with an undergraduate and graduate section.

AAMW 611 Greek Epigraphy
An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.
Taught by: McIverney
Course not offered every year
Also Offered As: ANCH 611, CLST 611, GREK 611
Activity: Seminar
1 Course Unit

AAMW 622 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neo-Ethiopic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age.
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 222, ARTH 622
Activity: Lecture
1 Course Unit

AAMW 624 Art of Mesopotamia
A survey of the art of Mesopotamia from 4000 B.C. through the conquest of Alexander the Great.
Taught by: Pittman
Course not offered every year
Also Offered As: ARTH 224, ARTH 624
Activity: Lecture
1 Course Unit

AAMW 625 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engage viewer’s emotions and served both domestic and the public aims. We discuss how art and space was considered, along with ideas of invention and progress, the role of monuments, makers and patrons in Greek society.
Taught by: Kuttner
Course not offered every year

Activity: Lecture
1 Course Unit

AAMW 626 Hellenistic and Roman Art and Artifacts
This course surveys the political, religious and domestic arts, patronage and display in Rome’s Mediterranean, from the 2nd c. BCE to Constantine’s 4th c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.
Taught by: Kuttner

Also Offered As: ARTH 226, ARTH 626
Activity: Lecture
1 Course Unit

AAMW 632 Byzantine Art and Architecture
This course offers a wide ranging introduction to the art, architecture, and material culture of Byzantium a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium’s interactions with neighboring cultures.

Activity: Lecture
1 Course Unit
AAMW 633 Eastern Medieval Architecture
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasia (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.

Activity: Lecture
1 Course Unit

AAMW 635 Introduction to Visual Culture of the Islamic World
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
Taught by: Holod
Course not offered every year
Also Offered As: ARTH 235, ARTH 635, NELC 285, NELC 685, VLST 235
Activity: Lecture
1 Course Unit

AAMW 640 Medieval Art
An introductory survey, this course investigates painting, sculpture, and the "minor arts" of the Middle Ages. Students will become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Course not offered every year
Also Offered As: ARTH 240, ARTH 640
Activity: Lecture
1 Course Unit

AAMW 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus' in process, as well the fundamentals of large-project research design and presentation.
Taught by: Bowes
Also Offered As: CLST 698
Activity: Seminar
1 Course Unit
Notes: Graduate students in Classical Studies, Ancient History, and AAMW

AAMW 701 Proseminar in Methods in the History of Art
The meanings we ascribe to art works of any culture or time period are a direct result of our own preoccupations and methods. This colloquium will give both a broad overview of contemporary debates in the history of art including such issues as technologies of vision, feminism, gender and sexuality studies, globalism, the pictorial turn or material/vision culture and locate these methods within art history's own intellectual history as well as the history of aesthetics. The course will consist of wide-ranging weekly readings and discussion, and also clarify such key terms as iconography, formalism, connoisseurship, and the Frankfurt and Vienna Schools.
Course not offered every year
Also Offered As: ARTH 701
Activity: Seminar
1 Course Unit

AAMW 702 Greek Sanctuaries
The formation and development of key religious sites, including Olympia, Delphi, Cyrene, Selinus, Cos and Lindos.
Course not offered every year
Also Offered As: ANCH 702
Activity: Seminar
1 Course Unit

AAMW 705 Ethnoarchaeology: Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.
Course not offered every year
Also Offered As: CLST 705
Activity: Seminar
1 Course Unit

AAMW 706 Archeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Penn Museum’s Mediterranean Section.

Also Offered As: CLST 715
Activity: Seminar
1 Course Unit

AAMW 720 Topics in Aegean Art
Topic varies. Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society's beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 B.C.E. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.
Taught by: Shank
Course not offered every year
Also Offered As: ARTH 720

AAMW 726 Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries. Taught by: Rose
Course not offered every year
Also Offered As: ARTH 726, CLST 711
Activity: Seminar
1 Course Unit

AAMW 732 Topics in Byzantine Art and Architecture
Topic varies. Spring 2018: The recent "return" to the object across the humanities and social sciences has brought to the fore concerns with the nature of material things, their operation in the world, and their entanglement with humans. This seminar will introduce you to some of the key theoretical writings on the object and material culture and will ask you to interrogate their relevance for the discipline of art history. Our focus will be on the Middle Ages, but depending on the specific interests of the seminar's participants, we may venture into other historical periods and cultural domains. Topics to be addressed include the social life of things; agency; materiality; the relic; the gift; the miniature; and the question of the human/nonhuman divide.??
Taught by: Drpic
Course not offered every year
Also Offered As: ARTH 732
Activity: Seminar
1 Course Unit

AAMW 737 Islamic Architecture
This seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural know-how and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill.
Taught by: Holod
Also Offered As: ARTH 737
Activity: Seminar
1 Course Unit

AAMW 738 Topics in Islamic Archaeology
Topic varies. Spring 2017: This seminar will trace the development of the field from one that was largely based on the recovery of major monuments to one in which issues of daily life, demography, chronology and the study of settlement patterns have come to play a major role. The seminar will review work in the major zones of the Islamic world: Central Asia, Iran, Iraq, Anatolia, Syria, Palestine, Egypt, North Africa (Libya-Tunisia), North Africa II (Algeria-Morocco), Spain. Of special interest this semester will be the study of landscape archaeology and settlement patterns. The seminar will discuss changes in patterns of settlement, trade and material culture 650 - 1300 CE in different areas of the Islamic world, concentrating on sites in Iran, Syria and North Africa.

Course not offered every year
Also Offered As: ARTH 738, NELC 731
Activity: Seminar
1 Course Unit
AAMW 740 Topics in Medieval Art
Topic varies. Spring 2015: Among the functional genres shaping religious imagery in the Middle Ages and Renaissance, the altarpiece is arguably the most important, and many of the most famous panel paintings that hang today in museums originated as components of altarpieces. The altarpiece in the Latin church bridged the divide between clergy and laypeople, between cult and devotion, between public acclaim and private interests. Such altarpieces developed into extraordinarily dynamic vehicles for staging the religious image, akin to mural painting (in its potential for narrative elaboration), and manuscript illumination (in its potential for interchanging and juxtaposing imagery). As an umbrella for diverse research projects in both medieval and Renaissance art, this seminar affords an overview of the origins, development and articulation of the altarpiece as a functional and pictorial genre in European art, on both sides of the Alps. It also seeks to provide students with the materials and practical training—technical, scholarly, interpretative—required to study altarpieces as visual, narrative, and material totalities. Course not offered every year
Activity: Seminar
1 Course Unit

AAMW 751 Participation in Archaeological Excavations
Opportunities for qualified students to join in current expeditions. Credit allowed will depend on the length of time spent in the field. Course usually offered summer term only

Art History (ARTH)

ARTH 008 Contemporary Museum Practice
This course introduces students to key issues in art museum practice. Students will meet with active and innovative members of the contemporary art world, at the Institute of Contemporary Art, Philadelphia, and off-campus. Taught by: Shaw
Course not offered every year
Activity: Seminar
0.5 Course Units

ARTH 100 Freshman Seminar
Topic varies. Fall 2018: As life in the nineteenth century sped up, so did the century’s art. Painting in “fifteen minutes,” as the critic Jules Laforgue described Impressionism in 1883, characterized a novel kind of picture built of hectic, freewheeling signs. Impressionism thus chronicled the profound cultural shifts of its era; its blurs and unfinished appearance made movement and a particularly modern sense of time and vision its chief subjects. This seminar seeks to understand these developments by establishing an account of Impressionism that fits our current global, multimedia and multidisciplinary forms of humanistic thought. To this end, we will read those recent scholars who place Impressionism within new contexts that include the history of science and technology (visual perception, psychology, evolution, chemistry), political history and theory (republicanism, revolution, empire, nationalism), and consumer culture (fashion, capitalism), among others. This course will of course also survey the movement’s major contexts and proponents—Manet, Monet, Degas, Morisot, Cezanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860s to its demise in the 1890s, as well as its subsequent adaptations throughout the world until World War I.
One-term course offered either term

Activity: Seminar
1 Course Unit
Notes: For Freshmen Only

ARTH 101 Prehistory to Renaissance: Introduction to Western Art from its Beginning to 1400
This is a double introduction: to looking at the visual arts; and, to the ancient and medieval cities and empires of three continents - ancient Egypt, the Middle East and Iran, the Minoan and Mycenaean Bronze Age, the Greek and Roman Mediterranean, and the early Islamic, early Byzantine and western Medieval world. Using images, contemporary texts, and art in our city, we examine the changing forms of art, architecture and landscape architecture, and the roles of visual culture for political, social and religious activity.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ARTH 102 Renaissance to Contemporary: Introduction to Western Art, 1400 to the Present
This course is an introduction to the visual arts including painting, sculpture, print culture, and new media such as photography, film, performance and installation art in Europe and the United States from 1400 to the present. It offers a broad historical overview of the key movements and artists of the period, as well as an investigation into the crucial themes and contexts that mark visual art production after the middle ages. Such themes include the secularization of art; the (gendered) role of the artist in society; the sites of art production and consumption such as the artist’s studio, the royal courts and the art exhibition; the materials of art; the import of technology and science to art’s making, content and distribution; the rise of art criticism; and the socio-political contexts of patronage and audience; among others.
For BA Students: Arts and Letters Sector
Taught by: Dombrowski, Kim, Shaw
Course usually offered in spring term
Also Offered As: VLST 232
Activity: Lecture
1 Course Unit
Notes: Fulfills Cross-Cultural Analysis Requirement; Fulfills Sector III, Arts and Letters Requirement
ARTH 103 Art and Civilization in East Asia
Introduction to major artistic traditions of China and Japan and to the methodological practices of art history. Attention given to key cultural concepts and ways of looking, in such topics as: concepts of the afterlife and its representation; Buddhist arts and iconography; painting styles and subjects; and more broadly at the transmission of styles and cultural practices across East Asia. Serves as an introduction to upper level lecture courses in East Asian art history cultures. If size of class permits, certain sessions will be held in the Penn Museum or the Philadelphia Museum of Art.
For BA Students: Arts and Letters Sector
Taught by: Davis, Steinhardt
Course not offered every year
Also Offered As: EALC 013, VLST 233
Activity: Lecture
1 Course Unit

ARTH 104 Introduction to Art in South Asia
This course is a survey of sculpture, painting and architecture in the Indian sub-continent from 2300 B.C., touching on the present. It attempts to explore the role of tradition in the broader history of art in India, but not to see India as ‘traditional’ or unchanging. The Indian sub-continent is the source for multi-cultural civilizations that have lasted and evolved for several thousand years. Its art is as rich and complex as that of Europe and diverse. This course introduces the full range of artistic production in India in relation to the multiple strands that have made the cultural fabric of the sub-continent so rich and long lasting.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: SAST 200, SAST 500, VLST 234
Activity: Lecture
1 Course Unit

ARTH 106 Architect and History
Human experience is shaped by the built environment. This course introduces students to the interrelated fields of architecture, art history, and engineering and explores great architectural monuments from the ancient to the modern period, from India across the Mediterranean and Europe to the US. The focus will be on understanding these works in their structure and function, both as products of individual ingenuity and reflections of Zeitgeist. Questioning these monuments from a present-day perspective across the cultures will be an important ingredient, as will be podium discussions, guest lectures, excursions, and all kinds of visualizations, from digital walk-throughs to practical design exercises. Regularly taught in fall term, this course fulfills Sector IV, Humanities and Social Science, and it satisfies History of Art 100-level course requirements.
For BA Students: Humanities and Social Science S
Taught by: Zarmakoupi
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ARTH 212 Cities and Temples in Ancient India
The wooden architecture of ancient India's cities is represented in relief carvings from Buddhist religious monuments of the early centuries A.D. and replicated in remarkable excavated cave cathedrals. This course will trace that architectural tradition, its transformation into a symbolic vocabulary for a new structure, the Hindu temple, and the development of the temple in India from ca. 500-1500 A.D.
Taught by: Meister
Course not offered every year
Also Offered As: ARTH 612, SAST 201, SAST 501
Activity: Lecture
1 Course Unit

ARTH 213 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 613, EALC 157, EALC 557
Activity: Lecture
1 Course Unit

ARTH 214 Arts of China
The goals of this course are to introduce the major artistic traditions of China, from the Neolithic period to the present and to teach the fundamental methods of the discipline of art history. Our approaches will be chronological, considering how the arts developed in and through history, and thematic, discussing how art and architecture were used for philosophical, religious and material ends. Topics of study will include; Shang bronzes: Han concepts of the afterlife; the impact of Buddhism; patronage and painting; the landscape tradition; the concept of the literatus: architecture and garden design; the "modern" and 20th-century artistic practices; among others.
Taught by: Steinhardt, Davis
Course not offered every year
Also Offered As: ARTH 614, EALC 127, EALC 527
Activity: Lecture
1 Course Unit

ARTH 217 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative are considered with regard to larger social and cultural issues. The class pays particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections.
Taught by: Steinhardt
Course not offered every year
Also Offered As: ARTH 617, EALC 227, EALC 527
Activity: Lecture
1 Course Unit
Notes: Also fulfills General Requirement in History Tradition for Class of 2009 and prior
ARTH 222 Art of Ancient Iran
This course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 622

1 Course Unit

ARTH 245 Gothic Architecture: Gold and Stone
Key monuments of the Middle Ages, the Gothic cathedrals of Western Europe present a synthesis of the theological, economic, and social developments of the twelfth through fourteenth centuries. A harmonious marriage between technology and aesthetics, of political power and imagination, these immense and ingenious structures are as famous for their sculptural programs as they are for the liturgies that animated their spaces. Students will also be introduced to local uses of Gothic in Philadelphia architecture to better understand the lived experiences of these built manifestations of transcendence.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 645, ARTH 645
Activity: Lecture
1 Course Unit

ARTH 250 Michelangelo and the Art of the Italian Renaissance
An introduction to the work of the Renaissance artist Michelangelo (1475-1564) his sculptures, paintings, architecture, poetry, and artistic theory in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 650
Activity: Lecture
1 Course Unit

ARTH 254 Global Renaissance and Baroque
An introduction to transcultural encounters within and beyond early modern Europe, 1450-1600. Topics include: the theory and historiography of global art; artistic relations between Venice, the Byzantine and Ottoman Empires, and islands in the Eastern Mediterranean; Portugal’s overseas mercantile network in Africa and Asia; and the Baroque in Latin America, with emphasis upon Brazil. Our discussions focus on these paradigmatic case studies so as to question the language and terms we use to characterize confrontations between native and foreign, the self and the other.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 654
Activity: Lecture
1 Course Unit

ARTH 258 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 658, EALC 150, EALC 550
Activity: Lecture
1 Course Unit

ARTH 251 Northern Renaissance Art
Survey of the principal developments in Northern Europe during the "early modern" period, i.e. the transition from medieval to modern art-making during the fifteenth and sixteenth centuries. Principal attention to painting and graphics with additional consideration of developments in sculpture, particularly in the regions of the Netherlands and German-speaking Europe. Attention focused on the works of the following artists: Van Eyck, Bosch, Durer, Hollein, Bruegel, and on topics such as the rise of pictorial genres, urban art markets, Reformation art and art for the dynastic courts of emerging nation-states.
Course not offered every year
Also Offered As: ARTH 661
Activity: Lecture
1 Course Unit

ARTH 252 Dutchish Art
Dutch and Flemish painting in the 15th and 16th centuries with special emphasis on the contributions of Robert Campin, Jan van Eyck and Roger van der Weyden, Bosch, and Bruegel. Also included are topics on the development of prints as well as the dialogue with Italian art.
Course not offered every year
Also Offered As: ARTH 662, DTC 261
Activity: Lecture
1 Course Unit
ARTH 267 Latin American Art
The numerous traditions of Latin American art have been formed from the historical confluence of Indigenous, European, African, and Asian cultural traditions, each one impacting the others. This course serves as an introduction to these hybrid New World art forms and movements by both providing a large chronological sweep (1492-present) and focusing on several specific countries, including Brazil, Mexico, Cuba, Peru, and Argentina.
Taught by: Shaw, Kim
Course not offered every year

Activity: Lecture
1 Course Unit

ARTH 270 The Modern City
A study of the European and American city in the eighteenth, nineteenth, and twentieth centuries. Emphasis is placed on the history of architecture and urban design; political, sociological, and economic factors also receive attention. The class considers the development of London, St. Petersburg, Washington, Boston, Paris, Vienna and Philadelphia.
Taught by: Brownlee, D.
Course not offered every year
Also Offered As: ARTH 670
Activity: Lecture
1 Course Unit

ARTH 271 Modern Architecture, 1700-1900
The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.
Taught by: Brownlee, D.
One term course offered either term
Also Offered As: ARTH 671
Activity: Lecture
1 Course Unit

ARTH 274 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Taught by: Shaw
Course not offered every year
Also Offered As: AFRC 294, ARTH 674, ASAM 294, CIMS 293, LALS 274
Activity: Lecture
1 Course Unit
Notes: Satisfies Cultural Diversity in the U.S. requirement.

ARTH 276 Impressionism
Impressionism opened the pictorial field to light, perception, science, modernity, bourgeois leisure and famously the material qualities of paint itself. This course will survey the movement’s major contexts and proponents—Monet, Manet, Morisot, Manet, Monet, Morisot, Cezanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860’s to its demise in the 1890’s, as well as its subsequent adaptations throughout the world until World War I. Particular attention is paid to artists’ critical reception and the historical conditions which allowed one nation, France, to claim the emergence of Early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France’s borders to Germany and Britain.
Taught by: Dombrowski
One term course offered either term
Also Offered As: ARTH 676
Activity: Lecture
1 Course Unit

ARTH 277 The Rise of Modernity: Arts of the 19th Century
The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century’s claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.
Taught by: Brownlee, Dombrowski
Course not offered every year
Also Offered As: ARTH 677
Activity: Lecture
1 Course Unit
ARTh 278 American Art
This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art’s relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.
Taught by: Leja Shaw
One-term course offered either term
Also Offered As: ARTH 678
Activity: Lecture
1 Course Unit
Notes: Satisfies Cultural Diversity in the U.S. requirement.

ARTh 281 Modern Architecture, 1900-Present
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ARTH 681
Activity: Lecture
1 Course Unit
Notes: Fulfills Cross-Cultural Analysis Requirement

ARTh 286 Modern Art: Picasso to Pollock
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through “anti-art.” A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts.
One-term course offered either term
Also Offered As: ARTH 686
Activity: Lecture
1 Course Unit

ARTh 290 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" is also be discussed.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 690, CIMS 223, EALC 156, EALC 556
Activity: Lecture
1 Course Unit

ARTh 292 Topics in Digital/New Media
Topic varies. Spring 2015: Documents are written texts, evidence, inscriptions, and much more. Documentary films have been used to tell stories, share experiences, spread propaganda, resist exploitation, invoke memories, and much more. How can we think of information and meaning in relation to the shared histories of document and documentary? Database management systems based on digital technologies have technically transformed ways of classifying, storing, and aggregating data, but have they really changed our experiences of mediating with our past, present, and future? Issues of agency, memory, representation, performativity, interactivity, and posthumanism are entangled in discussions of databases and archives and our engagement with them. In this course we will relate and juxtapose readings connecting documents, documentaries, and archives. We will read media and cultural theorists such as Lisa Gitelman, Akira Lippit, and Wendy Chun alongside novelists like Franz Kafka and Ismail Kadare. Assignments include one assigned/selected report from field visits to libraries and museums, one reading presentation and blogging assignment, and a final paper or practice-based art project.
Course not offered every year
Also Offered As: CIMS 278, ENGL 278
Activity: Seminar
1 Course Unit

ARTh 293 Topics in Cultural Studies
This topic course explores aspects of Film Cultural Studies intensively. Specific course topics vary from year to year. See the Cinema Studies website at <http://cinemastudies.sas.upenn.edu/> for a description of the current offerings.

Also Offered As: CIMS 295, COML 295, ENGL 295
Activity: Seminar
1 Course Unit
ARTH 294 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.
Taught by: Silverman
Course usually offered in spring term
Also Offered As: ARTH 694, ENGL 059, GSWS 294, VLST 236
Activity: Lecture
1 Course Unit

ARTH 295 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as "cinema" to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.
Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.
Taught by: Redrobe

Also Offered As: ARTH 695, CIMS 305, COML 299, ENGL 305, GSWS 295
Activity: Lecture
1 Course Unit

ARTH 296 Contemporary Art
Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the "canon" of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.
Course not offered every year

Activity: Lecture
1 Course Unit

ARTH 300 Undergraduate Methods Seminar
Topic varies. This course, required for history of art majors, acquaints students with a wide variety of historical and contemporary approaches to studying art, architecture, material culture, and visual culture.
Activity: Seminar
1 Course Unit

ARTH 303 Introduction to Museums
This course introduces students to the history, theory and modern practice of museums. Using the resources of the Penn Museum, the course discusses curatorial practice, education, exhibition design and conservation, while exploring the theoretical and ethical issues confronted by museums. Particularly relevant for those interested in archaeology, anthropology, art history, cultural heritage and public education.
One term course offered either term
Also Offered As: CLST 303
Activity: Seminar
1 Course Unit

ARTH 305 Spiegel-Wilks Seminar
Fall 2018: Susan Sontag once remarked that "We no longer study the art of dying...but all eyes, at rest, contain that knowledge. The body knows. And the camera shows, inexorably." This Spiegel-Wilks Curatorial Seminar explores the invention of photography and the proliferation of techniques and processes of representing the body in the 1800s. Offered in collaboration with the Barnes Foundation, and co-taught with Executive Director and President Thom Collins, the course will pay particular attention to the relation between photography, science and medicine, and new modes of representing life and death. In addition to being introduced to the history of photography, students will learn about the curatorial process and contribute to a forthcoming exhibition at the Barnes Foundation, where the course will meet weekly. Students will have the opportunity to interact with curators and scholars at the museum, and also engage Penn Medicine faculty who are pioneering new ways of imaging the body. Our discussions will build upon seminal texts by Roland Barthes, Geoffrey Batchen, Jonathan Crary, Kaja Silverman, Susan Sontag, and others. As part of the course, students will also conduct research and contribute curatorial writing for the exhibition.

ARTH 315 Topics in Japanese Art
Spring 2018: This course will focus on Japanese woodblock prints, printed books, and paintings from the seventeenth through the mid-nineteenth century in the genre of ukiyo-e. Among questions we will consider are: How did Ukiyo-e or the pictures of the floating world emerge as a genre and what was at stake for its makers and consumers? What are new approaches that we can use for the field? Topics will include themes shown in prints (celebrity actors and courtesans, the landscape and others), specific artists and their works. We will study original works held in the Kislak Collection and the Philadelphia Museum of Art, as well as other local collections as available, and we will work with emerging digital humanities tools for individual and group projects.
Taught by: Davis
Course not offered every year

Activity: Seminar
1 Course Unit

ARTH 318 Topics in African Art
Topic varies. Spring 2017: The dynamic, multi-media character of African art makes it particularly compelling as part of new art historical methodologies. Digital media—photographs, music, video, global mapping systems and 3-D printing—is reshaping understandings of African art history. This seminar critically explores how African art history has been taking shape through digital means, particularly online among professional arts institutions and as employed by contemporary African and African diasporic artists. As we consider how the digital world is shaping African art history we will encounter important issues in regards to ethics, cultural studies, performance theory, race, gender and global definitions of modernity. We will cover a very broad geography and time scale in this course in order to consider different movements of African art through the lens of the digital humanities. Students should bring a laptop to class as we work with WordPress to create web-based galleries, timelines and related critical writing.
Course not offered every year
Also Offered As: AFRC 318
Activity: Seminar
1 Course Unit

ARTH 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.
Taught by: Pittman
Course not offered every year
Also Offered As: ANTH 323, NELC 323
Activity: Seminar
1 Course Unit

ARTH 325 Topics in Greco-Roman Art
Topic varies. Fall 2017: The dwelling place – house, apartment, villa, palace - was central to Roman understanding of self and society. The domus was a major site of artefact - architecture, landscape architecture, fine objects, statuary and paintings. The very structure was often decorated with wall-paintings, stuccowork, or mosaics, like those which survive from sites like Pompeii and Antioch. Even modest establishments might aim to impress with a mythological painting or two: opening house to visitors was fundamental to social structures, business and politics. This course looks at Roman dwellings in city and country, and explores their arts in cultural and socio-political contexts. Besides evidence of archaeology, we can use the wealth of Roman texts about the arts of living. Since the Renaissance, graphic media have responded to interest in Roman house sites and their art; we consider how new tools of virtual reconstruction affect understanding of the Roman domus and villa, and the roles museums (like our own), exhibitions and curated sites still play in that understanding.
Taught by: Kuttner
Course not offered every year
Also Offered As: CLST 341
Activity: Seminar
1 Course Unit

ARTH 332 Topics in Byzantine Art
Topic varies. Fall 2017: This undergraduate seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity.

2018-19 Catalog | Generated 02/28/19
ARTH 343 Topics in Medieval Renaissance Art
Fall 2018: This course is designed to introduce students of both the
digital humanities and manuscript studies to the concepts and realities of
working with medieval manuscripts in the twenty-first century.
Through the course, students and faculty will examine materials from
the collections of the Kislak Center for Special Collections, Rare Books,
and Manuscripts, as well as digitized versions of those materials and
others. Students in the course will consider four issues relating to using
medieval manuscripts in a digital world. The first issue is theoretical,
considering the relationship between medieval manuscripts and their
digital counterparts, and questioning the notion of digital surrogacy. What
does digital surrogacy mean and how might it affect our consideration of
the physical objects represented through the surrogate? The second
issue is the practical one of imbibing best practices when creating digital
assets out of medieval manuscripts. If we are to digitize manuscripts,
how can we ensure that those digital versions are the best they can be?
And again: what does that mean? The third issue concerns the present
landscape for digital medieval manuscripts (and medieval studies more
generally), including current publication technologies and the place of
Open Data. The fourth issue is that of building resources with and for
digitized medieval manuscripts. What tools are available to enable us to
create something new?
Taught by: Herman, Noel, Porter
Activity: Seminar
1 Course Unit

ARTH 351 Topics in Early Modern Art Theory
Topic varies. Spring 2016: What does it mean to write about art? What are
the historical origins of this undertaking? How does language mediate
the intellectual, somatic, and cultural rapport between the viewing self
and the physical object? As an initial response to these questions we
will examine the writings of the Tuscan artist and critic Giorgio Vasari
(1511-1574), the biographer of such renowned artists as Leonardo,
Raphael, Donatello, and Michelangelo. In addition to considering works
of art described in Vasari’s accounts, we will pay close attention to his
language and its relationship with other types of writing: saints lives,
chronicles, legends, guidebooks, anecdotes, jokes, gossip, and sermons.
Issues to be explored include: the process of craft and handwork, notions
of genius and inspiration, and the relationship between the visual arts
and natural environment.
Taught by: Kim
Course not offered every year
Activity: Seminar
1 Course Unit

ARTH 356 Topics in Northern Baroque
Topic varies. Spring 2016: Undergraduate seminar focusing on all aspects
of the life and works of Rembrandt van Rijn (1606-1669). Students will
produce a research paper on any aspect of the artist’s life and times,
and course sessions will explore self-portraits, artistic development,
specific painting types (figure studies, landscapes, portraits), case study
individual works (the Paris Bathsheba and the Philadelphia Museum
Head of Christ), mythologies, religious works, and the etchings of
Rembrandt. Weekly discussions—one short analysis paper in addition to
the term research paper.
Course not offered every year
Also Offered As: DTCH 262
Activity: Seminar
1 Course Unit

ARTH 375 Topics in 19th Century Art
Topic varies. Spring 2016: This seminar will place Edouard Manet’s
influential paintings within the context of modern Paris, the French
Empire and the city’s increasingly global reputation in the late 19th
century. We will study the most prominent Parisian sites associated
with the rise of modernity as well as the global reach of the “myth” of
modern Paris throughout the world, in Japan, the U.S., Latin America,
the Middle East, among other destinations. The Eiffel Tower, shopping
arcades, department stores (like the Bon Marche), boulevards, sewers,
catacombs and world’s fair grounds (including their artistic and popular
representations) will be analyzed, as well as their global reception. We
will study paintings by Manet, Monet and others, in order to get a better
understanding of why the city of Paris is often named the birthplace of
modernist art. Students are expected to have at least some background
in art history, visual studies and French.
Taught by: Dombrowski

Course not offered every year
Also Offered As: AFRC 384, LALS 384
Activity: Seminar
1 Course Unit

ARTH 386 Topics in 20th Century Art
Topic Varies. Spring 2018: In 1913, Marcel Duchamp posed a nebulous
question central to much of the art of the twentieth century. As a
young painter in Paris, he wrote in a private note: “Is it possible to
make works that are not of art?” What are the possibilities of making
in a modern world that has alienated labor from its products and
commodified the work of art? What is the artist’s role amidst forces of
rapid industrialization, mechanization, and automation? Duchamp would
continuously explore these questions in a career that stretched into the
1960s, pushing painting, sculpture, and film in new directions through
the use of objects not traditionally associated with art a porcelain urinal,
a collection of settled dust, a tuft of human hair. This course examines
issues of materiality and media in Duchamp’s art and in modernism
more broadly. Meetings will include visits to the Duchamp collection
at the Philadelphia Museum of Art. Readings will draw from art history,
literature, and social and political theory.
Course not offered every year
Activity: Seminar
1 Course Unit
ARTH 388 Topics in Modern and Contemporary Art
Topic varies. Spring 2019: The end of the last century saw a shift in the way contemporary artistic practice was conceived. This class will consider the work and writings of key artists and thinkers of the last 50 years who have tackled issues of race, class, consumption, marginality, nationality, and modernism.

ARTH 393 Topics in Film Studies
Topic varies. Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.

ARTH 425 Late Antique Arts
What is "Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In the epoch of economic and political upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome', Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antiquity 'decline', analyze habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity; we visit arts of Sasanian and Islamic empires east and south, and 'barbarian' domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just 'monumental' painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books, jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.

1 Course Unit

ARTH 427 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts (gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.
Taught by: Kuttner, Rose
Course not offered every year
Also Offered As: AAMW 427, CLST 427
Activity: Lecture
1 Course Unit
ARTH 428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from
the 4th-century BCE and the rise of Alexander the Great's Macedon, and
the Greco-Macedonian conquest of the Persian Empire, to Cleopatra
of Egypt's defeat by Rome at the end of the Republic. Our course looks
also at the age of Augustus and his successors, 1st-century CE. While
Greek and Macedonian practice in city-states and kingdoms is our
launching point, this course also looks at international culture and
cultural interaction among peoples from North Africa and Etrusco-Roman
Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts,
and visual display from a range of settings, from sanctuary to house,
palace and parade, and in all media, from marble monuments to pottery
and jewelry. Our archaeology of Hellenistic visual culture also looks at the
rich body of Hellenistic and Roman texts of art history, art criticism, and
the description of objects and image, to better understand the Hellenistic
maker, patron, and viewer. No prerequisites.
Taught by: Kuttner

Activity: Lecture
1 Course Unit

ARTH 436 Later Islamic Art and Architecture
Istanbul, Samarkand, Isfahan, Cairo and Delhi as major centers of art
production in the fourteenth to seventeenth centuries. Attention is given
to urban and architectural achievement as well as to the key monuments
of painting and metalwork. The visual environment of the "gunpowder
empires" is discussed.
Taught by: Holod
Course not offered every year
Also Offered As: AAMW 531, NELC 436, RELS 440
Activity: Lecture
1 Course Unit

ARTH 501 Curatorial Seminar
Curatorial seminars expose students to the complexity of studying
and working with objects in the context of public display. With the
guidance of faculty and museum professionals, students learn what
it means to curate an exhibition, create catalogues and gallery text,
and/or develop programming for exhibitions of art and visual/material
culture. Fall 2018: In 1964, “Soy Cuba,” a collaboration between Cuban
and Soviet filmmakers was released. Now considered a masterpiece
of avant garde art, the film uses the backdrop of the island’s agrarian
landscape/urban slums, Spanish colonial architecture, and modern
highrise to dramatize the dire social and economic conditions that led
up to the Cuban Revolution of the 1950s. Using the film as an anchor, we
will study the artistic depiction of Cuba since the 1750s, while organizing
an exhibition of contemporary Cuban landscape painting for the Arthur
Ross Gallery. Permission of instructor required.

1 Course Unit

ARTH 505 Masters in Liberal Arts Proseminar
Topic varies. Fall 2017: This course examines way that issues
of universal, global, and national identity have been negotiated and
challenged in art and visual culture. It also aims to give students an
introduction to the various theories and methodological practices that
have been used to critique and explain these images and objects since
the end of WWII.

Activity: Lecture
1 Course Unit

ARTH 511 Topics in Indian Art
Topic varies. Fall 2016: Important as texts have been to South Asia's
history, perceptions of the physical world dominate experience within
South Asian cultures. Seeing and being seen, vocalizing and hearing,
contribute to the construction of meaning. This pro-seminar will approach
South Asia's perceptual world as expressed and tested by art, and
methods to frame art as a source of knowledge.

1 Course Unit

ARTH 513 Ukiyo-e: Japanese Prints and Paintings
Topic varies.
Taught by: Davis
Course not offered every year
Activity: Seminar
1 Course Unit
ARTH 514 Topics in East Asian Art
Topic varies. Spring 2017: In this seminar, led by Hiromi Kinoshita, The Hannah L. and J. Welles Henderson Associate Curator of Chinese Art, Philadelphia Museum of Art, students will learn about the considerations of a gallery reinstallation relating to the presentation of the Chinese collections at the Philadelphia Museum of Art. With more than 7,000 objects spanning from the Neolithic to the present, the reinstallation aims to display highlights and strengths of the collection that include early ceramics, porcelains, sculpture, furniture and architectural interiors with paintings and textiles. Students will study original objects of different media from the collection and learn about curatorial practices that include examination and analysis, connoisseurship, exhibition layout and label writing. Previous knowledge of Chinese art history and culture would be advantageous.
Taught by: Davis, Steinhardt
One-term course offered either term
Activity: Seminar
1 Course Unit

ARTH 515 Topics in Japanese Art
Topic varies. Fall 2018: This course will consider Japanese woodblock prints, illustrated books, and paintings from the seventeenth through the twentieth century. Topics include: the formation of "ukiyo-e" or "the pictures of the floating world" as a genre; the development of the publishing system and its audience; specific artists and their works; the reception of Japanese prints in Europe and America; the modern reinvention of the woodblock print; and others. We will also make extensive use of the collections held in the Kislak Center, the Philadelphia Museum of Art, and in other local collections. Assignments may include: close study of a single work; web page development; research paper; regular participation in discussions.

1 Course Unit

ARTH 517 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we will engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.

Course not offered every year
Also Offered As: EALC 260, EALC 661
Activity: Seminar
1 Course Unit

ARTH 520 Topics in Aegean Bronze Age
Topic varies. Fall 2016: Minoan and Cycladic Wall Paintings are considered a hallmark of the Aegean Bronze Age Civilization. Often, these paintings are discussed in terms of their iconography but in isolation of their archaeological contexts. In this class, we will examine both with the goal of determining what types of paintings are used in houses, palaces, defensive structures, and buildings of undetermined function, as well as examining their pictorial programs and iconographic interpretations. With the recent study of Minoan-style wall paintings in Egypt and the Ancient Near East, the question of the spread of Minoan and Cycladic techniques and motifs must also be considered, along with the archaeological contexts at these non-Aegean sites. We will have class discussions of assigned readings.
Course not offered every year
Also Offered As: AAMW 520
Activity: Seminar
1 Course Unit

ARTH 521 Topics in Ancient Mediterranean Art
Topic varies. Fall 2017: Painted vases constitute the most important and comprehensive collection of visual evidence that survives from ancient Greece. In this course, we will examine the development of Greek painted vases, with particular emphasis on the pottery of Corinth and Athens in the late 7th and 6th centuries BC. The extensive collection of Greek vases in the University of Pennsylvania Museum will be an important resource for this course.

1 Course Unit

ARTH 522 Topics in Ancient Iranian Art
Topic varies. Spring 2018: This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Instructors: Professors Holly Pittman (Penn), Peter Magee (Bryn Mawr College).
Taught by: Pittman
Course not offered every year

Course not offered every year
Also Offered As: AAMW 537, ANCH 527, NELC 617
Activity: Seminar
1 Course Unit

ARTH 540 Topics in Medieval Art
Topic varies. Spring 2018: The craft of ivory carving around the Mediterranean is contingent upon the availability of imported elephant tusks, from either South East Asia or, more frequently, from the African continent. The shifting winds of trade routes offer an interpretive paradigm with which to analyze ivory objects from a variety of different cultural groups: the lack or abundance of ivory and the resulting desire for or surfeit of the material shapes its meaning and use around the Mediterranean basin. The study of ivory objects as they migrate around the Mediterranean allows us to investigate the rich intercultural interactions between Eastern and Western Christians, and both of these with the Islamic world. This course focuses on an object oriented knowledge of ivory artefacts, with a strong emphasis on the collections at the Penn Museum, the Philadelphia Museum of Art, and other area collections.

Also Offered As: AAMW 540, AFRC 538
Activity: Seminar
1 Course Unit

ARTH 550 Topics in Southern Renaissance Art
Topic varies. Spring 2019: What made Renaissance Venice remarkable? Why was this city-state a driving force in early modern art and architecture? Why is the Venice of the Renaissance different from other centers such as Florence and Rome? How might we understand the importance of Titian, Palladio and Bellini to their peers and for future generations? Many of these questions are connected to the myth of Venice and the calculated construction of a history of the city and its idiosyncratic place in the political and social landscape as a hinge between west and east. In this seminar we will examine how artists and patrons used art and architecture to transform the capital city of an early modern empire into a powerful vehicle for the transmission of venetianità or Venetian-ness.
Taught by: Kim, Staff
Course not offered every year
Activity: Seminar
1 Course Unit

ARTH 551 Topics in Northern Renaissance
Topic varies. Spring 2017: This seminar will focus on the history and interpretation of Dutch and Flemish painting, particularly the seeming "realism" of landscape, still-life, and genre scenes as well as some of the major figures of the period for their distinctive contributions (including Rubens and Rembrandt, but not dominated by them): Jan Brueghel, Frans Hals, Jan Steen, Jacob van Ruisdael, David Teniers, Jan Vermeer, and others. Who were the consumers of such works? How did the burgeoning market for inexpensive art in the form of paintings on canvas and prints affect production and types of art? How can we understand these works in their original urban, middle-class setting?
Course not offered every year
Also Offered As: GRMN 578

ARTh 570 Eastern State Penitentiary Anchor Institution Seminar
Eastern State Penitentiary is one of the most famous and influential buildings in the world. Built in the early nineteenth century as an embodiment of the ideals of prison reformers, it is now preserved as a historic site whose award-winning programming explores contemporary issues of mass incarceration and criminal justice, subjects that many Americans believe to be the civil rights issues of our times. Taught in partnership with the staff of Eastern State, this seminar will explore the management of this "anchor institution." Topics to be considered include strategic planning, interpretation of the site, the design of programs and exhibitions (including site-specific art installations and theatrical events), architectural planning and conservation, and engagement with diverse constituencies and neighborhoods. The class will explore notable failures and missteps along with programmatic successes, and will explore ethical choices made when balancing social justice programming and the organization's Halloween-themed fundraising activities.

ARTh 579 Topics in American Art
Topic varies. Fall 2017: In this seminar, led by Kathleen A. Foster, the Robert L. McNeil, Jr., Senior Curator of American Art, students will be immersed in the planning process for the reinstallation of the American galleries at the PMA. Topics will include the history of the American collection and an analysis of its strengths, a critique of its current installation (designed in 1975-1976), and introduction to planning for a new layout and narrative of the early American galleries, set to open in 2020. Students will learn methods of object examination, research, and cataloguing using paintings of their choice from the collection from the 18th to the 20th centuries, with special attention to recent gifts from the bequest of Daniel W. Dietrich. Different types of interpretation, from the gallery label and the digital interactive to the traditional scholarly catalogue entry or the newer on-line publication format will be studied, along with theories and methods of display appropriate to these strategies, using the students' chosen objects.

ARTH 593 Topics in Cinema and Media
Spring 2016: Taking its title from a recent special issue in the journal Framework, this seminar will engage the wherewithal of film and media theory. At a moment when this discourse, often presumed to have roots in Anglo and Western European traditions, is purportedly undergoing a global turn, we will consider how some of film and media theory’s key terms and preoccupations including realism, documentary, genre, identity, sound, spectatorship, nation, auteur, and screens are being inflected by expanded geographic, linguistic, aesthetic and cultural frames. We will grapple with some of the logistical challenges, motivations, resistances, and questions that scholars encounter as they attempt to shift film and media theory’s borders; compare contemporary efforts to broaden the discourse’s geographic horizon with earlier efforts to do the same; and consider what happens to the viewer’s sense of space and place in different media environments. Course requirements: full participation in readings, screenings, discussion, and class presentations; 20-25 page research paper + annotated bibliography. Permission of instructor required for advanced undergraduates.
Taught by: Redrobe

Activity: Lecture
1 Course Unit

ARTH 614 Arts of China
The goals of this course are to introduce the major artistic traditions of China, from the Neolithic period to the present and to teach the fundamental methods of the discipline of art history. Our approaches will be chronological, considering how the arts developed in and through history, and thematic, discussing how art and architecture were used for philosophical, religious and material ends. Topics of study will include: Shang bronzes: Han concepts of the afterlife; the impact of Buddhism; patronage and painting; the landscape tradition; the concept of the literatus; architecture and garden design; the “modern” and 20th-century artistic practices; among others.
Taught by: Steinhardt, Davis
Course not offered every year
Also Offered As: ARTH 214, EALC 127, EALC 527
Activity: Lecture
1 Course Unit

ARTH 617 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting style forms the basis of analysis, and themes such as landscape and narrative are considered with regard to larger social and cultural issues. The class pays particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to look at paintings at the University of Pennsylvania Museum, PMA and/or local collections.
Taught by: Steinhardt
Course not offered every year

Activity: Lecture
1 Course Unit

ARTH 622 Art of Ancient Iran
This course offers a survey of ancient Persian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire. Particular emphasis is placed on the Early Bronze Age.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 622, ARTH 222
Activity: Lecture
1 Course Unit
**ARTH 624 Art of Mesopotamia**
A survey of the art of Mesopotamia from 4000 B.C. through the conquest of Alexander the Great.
Taught by: Pittman
Course not offered every year
Also Offered As: AAMW 624, ARTH 224
Activity: Lecture
1 Course Unit

**ARTH 625 Greek Art and Artifact**
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engage viewer's emotions and served both domestic and the public aims. We discuss how art and space was considered, along with ideas of invention and progress, the role of monuments, makers and patrons in Greek society.
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 625, ARTH 225, CLST 220
Activity: Lecture
1 Course Unit

**ARTH 626 Hellenistic and Roman Art and Artifacts**
This course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 626, ARTH 226, CLST 221
Activity: Lecture
1 Course Unit

**ARTH 632 Byzantine Art and Architecture**
This course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium. A Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts: political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the pagan Greco-Roman past; and the changing nature of Byzantium's interactions with neighboring cultures.
Taught by: Drpic
One-term course offered either term
Also Offered As: AAMW 632, ARTH 232
Activity: Lecture
1 Course Unit

**ARTH 633 Eastern Medieval Architecture**
This lecture course examines major architectural developments in the eastern Mediterranean between the 4th and 14th centuries CE. The focus is on the Byzantine Empire, with its capital at Constantinople. Lectures also devoted to related developments in the Caucasus (Armenia and Georgia), early Russia, the Balkans (Bulgaria and Serbia), Sicily and under the Normans, the Crusader states. Parallel developments in early Islamic architecture are used for comparative purposes. The course examines evidence for religious and secular buildings, as well as urbanism and settlement patterns.

Activity: Lecture
1 Course Unit

**ARTH 635 Introduction to Visual Culture of the Islamic World**
A one-semester survey of Islamic art and architecture which examines visual culture as it functions within the larger sphere of Islamic culture in general. Particular attention will be given to relationships between visual culture and literature, using specific case studies, sites or objects which may be related to various branches of Islamic literature, including historical, didactic, philosophical writings, poetry and religious texts. All primary sources are available in English translation.
Taught by: Holod
Course not offered every year
Also Offered As: AAMW 635, ARTH 235, NEHC 285, NEHC 685, VLST 235
Activity: Lecture
1 Course Unit
ARTH 640 Medieval Art
An introductory survey, this course investigates painting, sculpture, and the “minor arts” of the Middle Ages. Students become familiar with selected major monuments of the Late Antique, Byzantine, Carolingian, Romanesque, and Gothic periods, as well as primary textual sources. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects. Discussions focus especially on several key themes: the aesthetic status of art and the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.
Taught by: Guerin
Course not offered every year
Also Offered As: AAMW 640, ARTH 240
Activity: Lecture
1 Course Unit

ARTH 650 Michelangelo and the Art of the Italian Renaissance
An introduction to the work of the Renaissance artist Michelangelo (1475-1564)—his sculptures, paintings, architecture, poetry, and artistic theory—in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 250
Activity: Lecture
1 Course Unit

ARTH 654 Global Renaissance and Baroque
An introduction to transcultural encounters within and beyond early modern Europe, 1450-1600. Topics include: the theory and historiography of global art; artistic relations between Venice, the Byzantine and Ottoman Empires, and islands in the Eastern Mediterranean; Portugal’s overseas mercantile network in Africa and Asia; and the Baroque in Latin America, with emphasis upon Brazil. Our discussions focus on these paradigmatic case studies so as to question the language and terms we use to characterize confrontations between native and foreign, the self and the other.
Taught by: Kim
Course not offered every year
Also Offered As: ARTH 254
Activity: Lecture
1 Course Unit

ARTH 658 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603–1868). In this course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 258, EALC 150, EALC 550
Activity: Lecture
1 Course Unit

ARTH 661 Northern Renaissance Art
Survey of the principal developments in Northern Europe during the “early modern” period, i.e. the transition from medieval to modern art-making during the fifteenth and sixteenth centuries. Principal attention to painting and graphics with additional consideration of developments in sculpture, particularly in the regions of the Netherlands and German-speaking Europe. Attention focused on the works of the following artists: Van Eyck, Bosch, Durer, Holbein, Bruegel, and on topics such as the rise of pictorial genres, urban art markets, Reformation art and art for the dynastic courts of emerging nation-states.
Course not offered every year
Also Offered As: ARTH 261

1 Course Unit
**ARTH 671 Modern Architecture, 1700-1900**

The history of western architecture, ca. 1700-1900, when architecture was transformed to serve a world that had been reshaped by political and industrial revolutions. Topics to be considered include the Rococo, the English Garden, Palladianism, Romanticism, neo-classicism, the picturesque, the Greek and Gothic Revivals, and the search for a new style.

Taught by: Brownlee

One-term course offered either term

Also Offered As: ARTH 271

Activity: Lecture

1 Course Unit

**ARTH 674 Facing America**

This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

1 Course Unit

**ARTH 676 Impressionism**

Impressionism opened the pictorial field to light, perception, science, modernity, bourgeois leisure and famously the material qualities of paint itself. This course will survey the movement’s major contexts and proponents—Manet, Monet, Morisot, Cézanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860’s to its demise in the 1890’s, as well as its subsequent adaptations throughout the world until World War I. Particular attention is paid to the artists’ critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its effects on artistic developments. We also look outside of France’s borders to Germany and Britain.

**ARTH 677 The Rise of Modernity: Arts of the 19th Century**

The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century’s claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.

**ARTH 678 American Art**

This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art’s relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalism and popularity, celebrating modern life and criticizing it.

ARCH 681 Modern Architecture, 1900-Present
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

ARCH 686 Modern Art: Picasso to Pollock
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready-made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through “anti-art.” A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts. This course requires permission from the instructor.

ARCH 690 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujirō, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how “art” and “history” are being defined in the cinematic context. How other directors also took up these issues, and referred to the “big three” is also be discussed.

ARCH 694 Art Now
One of the most striking features of today’s art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

1 Course Unit

ARCH 695 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as “cinema,” to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be no screenings for this course. No knowledge of film theory is presumed. Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class midterm; 1 take-home final.

ARCH 696 Contemporary Art
Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the “canon” of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists of the post-war period, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

ARTH 714 Topics in East Asian Art
Curatorial Seminar Spring 2015: This course will be offered in association with the exhibition, Representing Place: Landscape and Imagination in Modern Japanese Prints, to be held at the Arthur Ross Gallery in spring 2015. The seminar proposes to expand our discussion of landscape as a larger theme in the visual arts, with examples drawn from Europe, America, East Asia, and other locations. We will further consider how some sites became known as famous places, and how that act is tied up to issues of local, regional and national identity and often implicated in the promotion of specific places. This course will feature the opportunity to study works in the PMA collection, travel to "famous sites" around Philadelphia, and participate in the final preparations and installation of the exhibition.

ARTH 720 Topics in Aegean Art
Topic varies. Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society's beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint.

### ARTH 738 Topics in Islamic Archaeology
Topic varies. Spring 2017: This seminar will trace the development of the field from one that was centered largely on the recovery of major monuments to one in which issues of daily life, demography, chronology and the study of settlement patterns have come to play a major role. The seminar will review work in the major zones of the Islamic world: Central Asia, Iran, Iraq, Anatolia, Syria, Palestine, Egypt, North Africa I (Libya-Tunisia), North Africa II (Algeria-Morocco), Spain. Of special interest this semester will be the study of landscape archaeology and settlement patterns. The seminar will discuss changes in patterns of settlement, trade and material culture 650 - 1300 CE in different areas of the Islamic world, concentrating on sites in Iran, Syria and North Africa.

### ARTH 750 Topics in Southern Renaissance Art
Topic varies. Fall 2018: This innovative course will explore the cross-fertilization between manuscript illumination and other media such as wall-painting, panel painting, architecture, sculpture, and stained glass across the early modern world, 1300-1600. We will consider such topics as: intermediality, artistic transfer, miniature vs. monumental, workshop practice, patronage, and the nascent art market. Students will have the rare opportunity to see and handle manuscripts held in area collections such as the Kislak Center and the Free Library of Philadelphia. This course is open to all students who are interested in artistic practice, the historical dimensions of media, and the social function of art. Our seminar will be coordinated with the Annual Schoenberg Symposium on Manuscript Studies (November 15-17, 2018), which will bring together an international group of experts in the field.

### ARTH 752 Topics in Renaissance to Contemporary
Topic varies. Spring 2018: Does money have a period-specific and thus historically variable look? Can we speak of a visual system of money or an imagination of money? How do we address questions of status and class, poverty and wealth, in 21st-century art history, and how do we read Marx (among others) art historically these days? How do we analyze art that is responsive to market fluctuations or extreme financial expansions and recessions? The seminar will engage directly with depictions of money from the Renaissance to the 19th century: the design of bills, coins, insurance policies, bond or stock certificates; the material changes to the face of money under regime-change; and representations of transactions in pawn shops, casinos, stock exchanges, and other market places. But we will also take money less literally and think anew about the value of materials, artists pay, patron s funds, and more broadly the costs associated with the making and consumption of art.  
*Taught by: Dombrowski, Kim*  
One-term course offered either term  
*Activity: Seminar*  
1 Course Unit

### ARTH 761 Topics in Northern Renaissance Art
Topic varies. Spring 2019: The notion of nature as fecund has spawned not only images of lushness but also analogies to the artist’s mind as a fertile place. Yet even in the early modern era, the taste for artistic objects in gold, silver, wax, and wood led to harvesting processes which met the awareness that nature’s resources could run low or even run out. As a collective effort to write the other side of the story of Renaissance abundance, this course will proceed by addressing the question of how the history of a finely crafted object (a goblet, an engraving, a painting on touchstone) might be told as a description of materials and their potential for expenditure. We will address this question by focusing on primary sources, theoretical texts, and a selection of objects, images, and early books from collections near at hand.

Activity: Seminar
1 Course Unit

ARTH 775 Topics in 19th Century European Art
Topic varies. Spring 2019: This graduate seminar considers the concepts of time active in the rise of modern painting in the 19th century, from historical time, leisure time and perceptual time to labor and mechanical time. Too rarely has the history of time and time-keeping, from the industrialization of time to the advent of universal time been used as a tool in the study of modernist painting (as opposed to say the moving image) except perhaps in terms of chronology. To that end, we will think through, as aesthetic categories, the concept of the moment, the instant, the impression, the now, the shock, and also samity and narrative sequence, and consider painting’s oft-cited competition with the camera’s evolving shutter speeds. More broadly, we will discuss the various times implied by new media and new artistic materials. Focusing on the century’s changing institutions of art (from the world’s fair to the independent exhibition), we will consider new demands placed on the time of viewing and active concentration. Finally, we will analyze art’s place within the century’s often rapid historic changes, such as revolutionary upheavals or shifting political regimes.

ARTH 783 Topics in Comparative Literature and Theory
This course has valuable content, addressing specific topics of broad, interdisciplinary concern in an innovative, multi-instructor format. The goal is to bring Penn students and faculty from a wide range of topics together around the study of theories, methods, periods and other common areas of interest in a shared intellectual space. Past topics have been "Modernism Across Borders," "Collective Violence, Trauma and Representation," and "Global Cultural Formations." The experimental seminar format devotes the first two hours of each three-hour class to discussion of readings selected in consultation with guest instructors from a range of Penn departments and programs, as well as nearby campuses. The third hour is devoted to a presentation and discussion of a work in progress, a project either of a member of the course, or of a guest. Guest instructors may appear for one or a few meetings. The course is coordinated by the convener(s) who are present for all the class meetings along with the guests. Students are encouraged to bring work in progress, either on the basis of past seminars or independent projects, to form the basis for their projects in the seminar.

ARTH 794 Topics in Contemporary Art
Topic varies. Fall 2018: Since it was not translated into English until the mid 1960s, Walter Benjamin's Work of Art essay was slow to arrive in the English-speaking world, and when it did, it seemed part of the same zeitgeist as Guy Debord's The Society of the Spectacle, Roland Barthes The Rhetoric of the Image, and Louis Althusser's Ideology and Ideological State Apparatuses. This zeitgeist was deeply suspicious of popular images, and this suspicion was soon fortified from a feminist direction by Laura Mulvey's Visual pleasure and Narrative Cinema, and a postcolonial one by Frantz Fanon's Black Skin, White Masks. Benjamin's essay extended it to the kinds of images we generally find in museums, i.e., to what I will be calling pictures. This made the museum the primary target of institutional critique, and gave rise to what Hal Foster called the anti-aesthetic. It was against this backdrop that the so-called Pictures Generation emerged. This category was helpful at first, since it allowed us to look at things that would otherwise have been forbidden. It was based, however, on a misapprehension: the misapprehension that a picture means the same thing for Jeff Wall as it does for Cindy Sherman.

Asian American Studies (ASAM)

ASAM 001 Asian Americans in Contemporary Society
This class will introduce you to sociological research of Asian Americans and engage in the "model minority" stereotype. We begin by a brief introduction to U.S. immigration history and sociological theories about assimilation and racial stratification. The class will also cover research on racial and ethnic identity, educational stratification, mass media images, interracial marriage, multiracials, transracial adoption, and the viability of an Asian American panethnic identity. We will also examine the similarities and differences of Asian Americans relative to other minority groups.
For BA Students: Society Sector
One term course offered either term

ASAM 160 South Asians in the United States
This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own history, customs, beliefs and values, making each unique while simultaneously a part of the "melting pot" or "salad bowl" of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States.
Taught by: Khan
Course usually offered in fall term

Activity: Lecture
1 Course Unit

ASAM 170 Psych of Asian Americans
Using a cultural perspective, this course is intended to provide knowledge of Asian American personality, identity, and its relationship to mental well being; analyze psycho-social research pertinent to Asian Americans; and develop critical thinking skills on Asian American issues through experiential learning/discussions.
Course usually offered in spring term
Also Offered As: SAST 170
Activity: Seminar
1 Course Unit
ASAM 180 Asian American Food
You are what you eat. Asian American Food explores the history, politics, and ethnic identity of food through a cultural lens. Growing food, eating, and sharing meals serve as intimate expressions of self and community. By examining the production and consumption of food, the course investigates the ways that Asian Americans navigate traditions, gender norms, religious dietary laws, food habits, and employment as they create lives in the United States. The course overviews the history of Asian American foodways, but has a particular focus on Philadelphia’s Asian American communities.

Asian Languages (ALAN)

ALAN 110 Elementary Vietnamese I & II
An introduction to the language of North and South Vietnam. Instruction includes reading, writing, speaking and listening.
For BA Students: Language Course
Taught by: Nguyen
One-term course offered either term
Prerequisites: For the second semester, completion of the first semester or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

ALAN 120 Beginning Filipino I & II
An introduction to the spoken and written Tagalog (Filipino) language. This will prepare and develop students' basic skills in speaking, listening, reading and writing Filipino at its beginning level.
For BA Students: Language Course
Taught by: Juliano
Two terms. student must enter first term.
Prerequisites: For the second semester, completion of the first semester of ALAN 120 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

ALAN 121 Beginning Filipino II
Activity: Lecture
1 Course Unit

ALAN 130 Beginning Thai I & II
An introduction to the spoken and written Thai language. Beginning Tibetan will explain the fundamentals of the modern Tibetan language in its literary and spoken forms. Students will develop the ability to read the Tibetan script and identify and analyze Tibetan grammatical forms. Students will also learn conversational Tibetan, and be introduced to the structure of spoken grammar and its pronunciation. This class will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan.
For BA Students: Language Course
Two terms. student must enter first term.
Prerequisites: For the second semester, completion of the first semester or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

ALAN 131 Beginning Thai II
Beginning Tibetan II will develop fundamentals of the modern Tibetan language in its literary and spoken forms. Students will continue learning to read Tibetan and analyze Tibetan grammatical forms. Students will also continue learning conversational Tibetan, and increase familiarity with the structures of spoken grammar and pronunciation. This course will provide a foundation for reading Tibetan literature, both classical and modern, and for speaking Tibetan. Rich and colorful culture of Tibet will be part of the curriculum.
Two terms. student must enter first term.
Activity: Lecture
1 Course Unit

ALAN 150 Elementary Indonesian I
Elementary Indonesian I course is designed for both beginners and those who may have some prior experience with the language. This course will focus on developing and using the four foundational language skills (speaking, listening, reading, and writing) in a communicative format. Students will develop not only their ability to use and understand contemporary Indonesian, but also their knowledge of Indonesian history and culture. By the end of the semester, students will be able to engage in simple conversations about familiar things such as family, friends and daily activities. They will know every day expressions, will be able to tell time, to negate sentences and to build questions. Students will develop reading strategies and learn about the practical life and the cultural practices in Indonesia and compare them with their own.
For BA Students: Language Course
One-term course offered either term
Activity: Lecture
1 Course Unit

ALAN 210 Intermediate Vietnamese I & II
A continuation of ALAN 110, the written and spoken language of Vietnam.
For BA Students: Language Course
Taught by: Nguyen
One-term course offered either term
Prerequisites: ALAN 110 or equivalent. For the second semester, completion of the first semester or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

ALAN 220 Intermediate Filipino I & II
A continuation of ALAN 120, the spoken and written Tagalog (Filipino) language. This course will develop the communicative competence of the students in handling limited communicative tasks, reading simple connected texts and writing short dialogues.
For BA Students: Last Language Course
Taught by: Juliano
Two terms. student must enter first term.
Prerequisites: For the second semester, completion of the first semester of ALAN 220 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.
**Astronomy (ASTR)**

**ASTR 001 A Survey of the Universe**
A general survey, designed for the non-major, of the facts and theories of the astronomical universe, from solar system to stars, to galaxies and cosmology. Topics include planets, satellites, small objects in the solar system, and extraterrestrial life; stars, their evolution, and their final state as white dwarfs, neutron stars, or black holes; galaxies, quasars, large structures, background radiation, and big bang cosmology. Elementary algebra and geometry will be used. This course is not recommended for physical-science majors or engineering students. Engineering students receive no credit for this course. Fulfills quantitative data analysis requirement.
For BA Students: Physical World Sector
Course offered summer, fall and spring terms
Activity: Lecture
1 Course Unit
Notes: Only one ASTR course below ASTR 211 may be taken for credit. Engineering students receive no credit for this course.

**ASTR 006 The Solar System, Exoplanets, and Life**
A survey course on planets and life covering our own Solar System and exoplanets orbiting other stars. Topics include the latest results and theories about: the origin and evolution of planetary systems around our Sun and other stars; the detection of exoplanets; the implications of planetary atmospheres for life; and the search for life on other planets in our Solar System. This course is designed for the non-major and elementary algebra and geometry will be used. Physical science majors and engineering students should prefer ASTR 211 to this course.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 211 may be taken for credit. Fulfills quantitative data analysis requirement.

**ASTR 007 The Big Bang and Beyond**
An introductory course for students who do not intend to major in a physical science or engineering, covering theories of the Universe ranging from the ancient perspective to the contemporary hot big bang model, including some notions of Einstein's special and general theories of relativity. Topics will include the solar system, stars, black holes, galaxies, and the structure, origin and future of the Universe itself. Elementary algebra is used. Fulfills quantitative data analysis requirement.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Also fulfills General Requirement in Physical World for Class of 2009 and prior. Only one ASTR course below ASTR 211 may be taken for credit.

**ASTR 211 Introduction to Astrophysics I**
A basic course for majors in physical sciences and engineering; required for the astrophysics concentration. The course provides fundamental knowledge of Newtonian gravity and the properties of light and matter as they are relevant for understanding astrophysical objects. Application is made to the observed features of planetary motion, the atmospheres and stars and planets, and the structure and evolution of stars.
For BA Students: Physical World Sector
Course usually offered in fall term
Prerequisites: MATH 104, PHYS 150, or concurrently.
Activity: Lecture
1 Course Unit

**ASTR 212 Introduction to Astrophysics II**
A basic course for majors in physical sciences and engineering; require for the astrophysics concentration. The course covers fundamental knowledge of Einstein's gravity, the contents of the universe, and the structure and distribution of galaxies. Emphasis is on the key elements of modern cosmology: the mathematical model of the expanding universe, the cosmic microwave background, the early universe and the emergence of large-scale structure in the present universe.
For BA Students: Physical World Sector
Course usually offered in spring term
Prerequisites: MATH 114, PHYS 151, or concurrently.
Activity: Lecture
1 Course Unit

**ASTR 250 Astronomical Techniques**
A laboratory course in astronomical observations and data reduction. This course satisfies one of the requirements for the astrophysics concentration. Topics vary, but include spherical astronomy, timekeeping and coordinate systems, astro-statistics, telescopes, CCD's, signal processing, imaging, spectroscopy, radio astronomy and data reduction techniques using custom software. Attendance at observatory sessions outside of the scheduled class time is required, but times are uncertain due to weather conditions. The course requires small-group work in-class, and substantial out-of-class time. Notes: Course not offered every year. The observatories at DRL are used for experimental and observational practice.
Course offered spring; even-numbered years
Prerequisites: ASTR 001, or ASTR 007, or ASTR 211, or ASTR 212. If a student has only taken ASTR 001 or ASTR007, MATH 240-241 will also be required.
Activity: Lecture
1 Course Unit
Notes: The observatories at DRL are used for experimental and observational practice.
ASTR 392 Life and Death of Stars
This is an advanced undergraduate course on the life and death of stars. The course will cover the structure of stellar interiors, nuclear reactions and the formation of elements, stellar evolution, supernovae, and the physics of white dwarfs, neutron stars, and black holes. We will approach these topics from both theoretical and observational perspectives. One term course offered either term
Activity: Lecture
1 Course Unit

ASTR 503 Astronomical Methods and Instrumentation
Techniques of modern astronomical observations, including: detection of light from the radio through gamma rays; sources of noise in astronomical measurements; image analysis and reduction techniques; telescope optics and adaptive optics; spectroscopic measurements; radio interferometry and spectroscopy.
Course offered spring; even-numbered years
Activity: Lecture
1 Course Unit

ASTR 533 Galaxies: Structure, Dynamics and Formation
Galactic structure and dynamics. Observed scaling relations. Models and observations of galaxy formation and evolution. Enrollment restricted to graduate students.
Course offered fall; odd-numbered years
Activity: Lecture
1 Course Unit

Behavioral & Decision Sciences (BDS)

BDS 501 Behavioral Economics & Psychology: Theory & Experiments
This is a core course requirement in the MBDS program. In reality, our understanding of different mechanisms and (economic) relationships is hampered by a lack of data - and, more often than not, either the observation itself or the data is not reliable. In recent decades, through the work of pioneers in the behavioral and experimental economics field, such as Daniel Kahneman and Vemon Smith, economic experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in biology, chemistry, physics, etc.). In this course, we will explore economic behavior by developing a research idea, designing an experiment, then carrying out the experiment under controlled conditions. Essentially, you will learn how to think about ideas, generate ideas, and use economic experiments to test them.
Activity: Lecture
1 Course Unit

BDS 502 Social Norms and Informal Institutions
Social norms are the rules we live by, and we encounter them in any area of our life. Social norms often guarantee the smooth functioning of a group or organization. Sometimes, however, these norms are inefficient or do not benefit society at large. What can we do to change these harmful collective behaviors? Social psychology, philosophy, sociology, rational-choice, legal theory, and even economics, are investigating and theorizing pro-social behavior, justice motivation, and moral and social norms.
In this course, we will examine the latest and best in this emerging multidisciplinary field. Students will be encouraged to apply its findings and methods to their area of interest.
Activity: Lecture
1 Course Unit

BDS 503 Public Policy and Applications
A core MBDS program course requirement, this course addresses methodological issues that apply to each of the policies currently provided by governmental and non-governmental institutions worldwide. We will discuss the conditions that must be satisfied to make policies effective and the behavioral incentives that policy actors face. The course relies on the main theoretical and empirical findings of modern policy analysis and upon an extensive set of case studies. Students are required to master the conceptual material and to confront and solve practical cases in public policy, policy.
Activity: Lecture
1 Course Unit

BDS 511 Negotiation Behavior
We negotiate every day: with merchants, service providers, employers, coworkers, friends, and family. Determining what price we will pay, the amount of our salary and compensation, what movies to watch, where to go to dinner, who will clean the kitchen, and so forth. Although negotiations are a ubiquitous part of our everyday lives, many of us know little about the strategy and psychology of effective negotiations. Why do we sometimes get our way, while other times we walk away feeling frustrated by our inability to achieve the agreement we desire? Over the past few decades, research in social psychology and decision science has sought the answer to this question and created a rich body of knowledge on bargaining behavior, leading to a well-validated prescription on how to negotiate. In this course, you will learn both the how and the why of negotiation behavior. Through role-playing exercises, you will be able to evaluate your own negotiation behavior as well as those of your classmates and receive advice on how to optimize it to achieve your desired outcomes. Importantly, you will also read and discuss research articles that have led to to such practical advice. In this way, the goal of this course is to combine negotiation practice and theory so you can develop a comprehensive skillset of negotiation behavior.
Activity: Lecture
1 Course Unit

BDS 512 Power, Persuasion and Influence
For permits please see: https://www.sas.upenn.edu/lps/graduate/mbds/permit-request Power and influence are fundamental for taking action in personal relationships, professional contexts and in society in general. To be able to use them effectively, however, we need to understand the nature, sources, uses and development of power and influence in these various contexts. To accomplish this goal, this course will survey theories of power, persuasion and influence from multiple disciplines and discuss their application to everyday actions.
Activity: Lecture
1 Course Unit
BDS 516 Quantitative Modeling in the Decision and Social Sciences
(This course fulfills the MBDS program’s quantitative course requirement.) Increasingly, decision-makers and systems rely on intelligent technology to analyze data systematically to improve decision-making. Data science is opening new pathways to improve decision-making in private and public organizations. Through lectures and real-world examples, this course will present a practical understanding of the fundamental methods used by data scientists including data management techniques, quantitative modeling, and data visualization. The primary emphasis is on understanding the fundamental concepts and applications of data science in the context of behavioral and decision sciences. We will cover several algorithms though this is not an algorithms course. We will examine real-world examples and cases to place data science techniques in context, to develop data-analytic thinking, and to illustrate that proper application is as much an art as it is a science.

Activity: Lecture
1 Course Unit

BDS 517 Trust and Uncertainties
For permits please see: https://www.sas.upenn.edu/lps/graduate/mbds/permit-request Why do we trust some people and not others? What signals give us reason to trust some brands or products more than others? Trust is a foundational feature of the decisions we regularly undertake and turns largely on the kinds of uncertainty that we encounter. This course will provide background on the different types of trust we elicit and the motivational conditions that bring these expectation about. In so doing we will see that the nature of trust requires a more nuanced assessment of what we mean by uncertainty and how we experience it.

Activity: Lecture
1 Course Unit

BDS 521 Judgments & Decisions
This course addresses the ideal standards of judging and deciding, and the ways in which people fall short of these standards, with emphasis on the latter. We will discuss heuristics and other intuitive strategies that people may use in day-to-day thinking, and the biases that result from this use. We will apply this approach to shed light on faulty analyses in medicine, law, and everyday thinking. Understanding the ideals of good thinking and causes of our failure to conform to these ideals may ultimately help improve the decisions we make in private and professional lives. A limited number of seats in this class are reserved for upper level LPS undergraduate students who may be allowed to register with special permission from the instructor.

Activity: Lecture
1 Course Unit

BDS 522 Statistical Reasoning for Behavioral Science
For permits please see: https://www.sas.upenn.edu/lps/graduate/mbds/permit-request The complexity of human behavior exceeds that of most phenomena studied in the natural sciences. Any inference about human behavior and decision-making has to rely on statistical methods rather than on deterministic modeling. In this class, students will learn the methods of descriptive and inferential statistics used in behavioral science from the basics to those more commonly used. In this sense, this is a class on theoretical statistics, but we will go beyond theory to apply these methods to answer our own research questions. As such, this is also a class on applied statistics. We will rely heavily on statistical programming languages (namely, R) and version control systems (Git) to create statistical reports. Finally, we will work with new research in the field and learn to critically assess the statistical methods used therein. After completing this class, students will be competent in reading cutting-edge scientific literature, producing their own results using the more commonly used methods, and able to critically assess the limitations of their own and other people’s research.

Activity: Lecture
1 Course Unit

Bengali (BENG)

BENG 403 Beginning Bengali Part I
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.

For BA Students: Language Course
Taught by: Banerjee, H
Course usually offered in fall term
Activity: Lecture
1 Course Unit

BENG 404 Beginning Bengali Part II
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.

For BA Students: Language Course
Taught by: Banerjee, H
Course usually offered in spring term
Prerequisites: Beginning Bengali Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit
BENG 423 Intermediate Bengali Part I
This course develops the student’s prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.
For BA Students: Language Course
Taught by: Banerjee, H
Two terms. Student must enter first term.
Activity: Lecture
1 Course Unit

BENG 424 Intermediate Bengali Part II
This course develops the student’s prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.
For BA Students: Last Language Course
Taught by: Banerjee, H
Course usually offered in spring term
Prerequisite: Intermediate Bengali Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit

BENG 433 Advanced Bengali
The objective of this course is to develop the proficiency level of the students in all the four skills by using different genres of Bengali literature (West Bengal and Bangladesh) as its course content. Reading comprehension will be enhanced as students learn to understand authentic texts at the linguistic and cultural level while discussion (description, narration, supporting opinion) on issues related to these texts aim to hone the oral and written skills. Students will be allowed to work on individual texts & topics (with the instructor’s permission) for their final project. This is a one semester course. Spring: Bengali Popular Culture. This course aims to use as its content, different aspects of popular Bengali culture as they are represented in media (film, television, magazines, newspapers) and arts (fashion, local and regional art, music). Students will be expected to develop their linguistic skills (description, narration, supporting opinion) and socio-cultural awareness while interacting with these varied types of texts. Students will be allowed to work on individual texts & topics (with the instructor’s permission) for their final project. This is a one semester course.
For BA Students: Advanced Language Course
Taught by: Banerjee, H
Course not offered every year
Activity: Lecture
1 Course Unit

Biochemistry & Molecular Biophysics (BMB)

BMB 508 Macromolecular Biophysics: Principles and Methods
This course introduces students to the physical and chemical properties of biological macromolecules, including proteins and nucleic acids. It surveys the biophysical techniques used to study the structure and thermodynamics of macromolecules. It is intended to be a first course for graduate students with an undergraduate background in either physics, chemistry or biology and no necessary background in biochemistry.
Taught by: Sharp
Course usually offered in fall term
Prerequisite: Senior undergraduate or graduate level biochemistry or biophysics
Activity: Lecture
1 Course Unit

BMB 509 Structural and Mechanistic Biochemistry
The course will focus on the key biochemical task areas of living cells. The course progresses from primarily molecular level events, such as storage and translocation of genetic information, creation, control and removal of proteins, to higher organization levels such as metabolic pathways, signaling pathways, regulation and homeostasis. Each section will cover structure details of the relevant molecules, appropriate binding/catalysis events, regulatory aspects, and how they fit into the relevant pathway(s) and cell function. Material will be covered with a combination of formal lectures and student presentations.
Taught by: Van Duyne
Course usually offered in spring term
Prerequisites: BMB 508 and BIOM 600 or permission of course director.
Activity: Lecture
1 Course Unit

BMB 510 Data Analysis and Scientific Inference
An introductory course in the analysis of data and scientific inference for graduate students in Biochemistry, Molecular Biophysics, and related quantitative biomedical research areas. The course will stress fundamental principles of data analysis, best practice in presenting data, and how to draw sound scientific inferences from the data. The overall goal is to provide students the tools to carry out rigorous and reproducible scientific research.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

BMB 518 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, ranging from Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis, prion diseases, alpha(1) antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation.
Taught by: Argon and Ischiropoulos
Course offered fall; odd-numbered years
Also Offered As: CAMB 615, NG 615
Prerequisite: BIOM 600 or equivalent
Activity: Lecture
1 Course Unit
BMB 554 Macromolecular Crystallography: Methods and Applications
This is an introductory course on methods and applications of macromolecular structure determination using X-ray crystallography. The course will be broken up into three parts: 1) Principles of X-ray crystallography involving didactic lectures on the technique of weekly problem sets; 2) Workshops on macromolecular structure determination involving hands-on experience with the technology; 3) Student "journal club" presentations on current high impact publications involving X-ray crystal structure determination.
Taught by: Marmorstein and Skordalakes
Course usually offered in fall term
Also Offered As: CHEM 555
Prerequisites: Undergraduate calculus and trigonometry
Activity: Lecture
1 Course Unit

BMB 557 Bioinorganic Chemistry
This course covers selected topics in bioinorganic chemistry. Special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: 1) oxygen uptake and utilization; 2) oxygen transport; 3) oxygen and O atom incorporation into substrates; 4) metalloenzyme-catalyzed C-C bond formation; 5) the metallobiochemistry of DNA; 6) metal-sulfide proteins; 7) manganese containing metalloproteins; 8) photosystem II, light-driven electron transfer and the biological water-splitting reaction; 9) biological electron transfer; 10) electron transfer theory; 11) mechanisms of energy storage and release; and 12) long-distance electron transfer reactions.
Taught by: Dmochowski
One term course offered either term
Also Offered As: CHEM 567
Activity: Lecture
1 Course Unit

BMB 581 Techniques of Magnetic Resonance Imaging
Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism, spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion and a discussion of the most relevant clinical applications.
Taught by: Song and Welti
Course offered spring; odd-numbered years
Also Offered As: BE 581
Activity: Lecture
1 Course Unit

BMB 585 Wistar Institute Cancer Biology Course: Signaling Pathways in Cancer
This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students but all graduate students are welcome to attend.
Taught by: Skordalakes and Murphy
Course usually offered in fall term
Also Offered As: GCB 585
Prerequisites: Undergraduate and Master's degree candidates require permission from the course directors
Activity: Lecture
1 Course Unit

BMB 598 Tutorial
The tutorial course is designed for in-depth study of a specific topic thorough one-on-one meetings and discussions between the student and a selected BMB faculty member. The intent of the course is to broaden the students knowledge, thus the tutorial may not be taken with the student's current rotation advisor or thesis advisor. Choice of faculty member and topic is by prior mutual agreement between the student and faculty member, subject to approval by the course director. Student and faculty member will typically meet for an hour or so 2 - 3 times per week. The course may take the form of literature study, or where appropriate, a mini-project (typically computer-based). A tutorial can be used by students to become more deeply acquainted with the literature related to their thesis project or to help prepare students for their Candidacy Exam. Upon completion of the tutorial, students must prepare a written description of the area studied (5-10 typewritten pages).
Taught by: Kim Sharp and staff
Course offered summer, fall and spring term
Activity: Independent Study
1 Course Unit

BMB 601 Fundamentals of Magnetic Resonance
This course introduces basic theoretical and experimental concepts of magnetic resonance and its applications in biochemistry, biology and medicine. Topics covered include description of the phenomenon of magnetic resonance, and classical and quantum strategies to compute nuclear spin responses in liquids, solids and biological tissues, polarization transfer and multiple quantum effects and their applications in biomedicine. Nuclear spin relaxation in solid-state materials and in biological systems will be discussed. Concepts of magnetic resonance imaging, imaging strategies, image contrast, and diagnostic applications are discussed. The course includes several practicals dealing with the demonstration of NMR hardware and experiments to compute basic NMR parameters on high resolution and clinical MRI scanners. For further details of this course, visit www.mmrcc.upenn.edu
Taught by: Reddy
Course offered fall; odd-numbered years
Activity: Lecture
0.5 Course Units
BMB 605 Drug Discovery and Development
This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.
Taught by: Dr. Ben E. Black, UPenn and Dr. Craig A. Leach, GlaxoSmithKline
Course usually offered in spring term
Also Offered As: CAMB 710, PHRM 605
Activity: Lecture
1 Course Unit
Notes: 2 X 1.5 hr sessions per week

BMB 618 Applications of High Resolution NMR Spectroscopy to Problems in Structural Biology
A lecture-based course designed to introduce graduate students to applications of modern high-resolution multinuclear and multidimensional NMR spectroscopy to problems in structural biology.
The course will first introduce classical definitions and descriptions of nuclear magnetic resonance and a convenient formalism for the analysis of advanced NMR experiments. Concepts and applications of multidimensional homonuclear 1H NMR and multidimensional heteronuclear spectroscopy of proteins and nucleic acids will be described. Resonance assignment strategies including analysis of triple resonance spectroscopy will be covered. The origin, measurement and extraction of structural restraints and their use in structure determination will be surveyed and illustrated with recent examples.
Taught by: Wand
Course offered fall; odd-numbered years
Prerequisites: Undergraduate biochemistry and physical chemistry and BMB 601, or permission of instructor
Activity: Lecture
0.5 Course Units
Notes: Course meets for 8 weeks and is offered for 1/2 credit

BMB 622 Physical Principles of Mechano-Enzymes
This course will provide an introduction to the biochemical, structural, and mechanical properties of energy-transducing enzymes. We will emphasize the relationships of mechanical, thermal, and chemical forces in mechano-enzyme function.
Taught by: Dominguez, Goldman, Grishchuk and Ostap
Course offered spring; even-numbered years
Prerequisite: Biochemistry
Activity: Lecture
0.5 Course Units
Notes: Course meets for 8 weeks and is offered for 1/2 credit.

BMB 624 Molecular and Physical Basis of Ion Channels
The course is a journal club format, targeted to graduate and MD/PhD students interested in ion channels from graduate programs in Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Molecular Biophysics. It meets for one hour once a week on alternate weeks and is coupled to the Ion Channel Journal Club, which also meets for one hour on the same alternate weeks (9:30-10:30 a.m., Thursdays, B400 Richards Building). A faculty member meets with students to discuss and review the contents of each selected article early in the week in preparation for the subsequent Journal Club presentation. This elective course is meant to introduce students to the latest advances in ion channel research and includes topics extending from biophysics, structure, and physiology to cell biology and medical applications.
Taught by: Kallen
Course offered spring; odd-numbered years
Activity: Lecture
0.5 Course Units
Notes: Course meets all semester (half time) for 1/2 credit.

BMB 626 Mass Spectrometry and Proteomics
This course will provide a detailed introduction to proteomics and mass spectrometry. The role of mass spectrometry in both characterizing proteins for traditional protein structure-function studies and identification of proteins in proteome studies will be emphasized. Targeted and global proteomes, quantitative protein profiling and compositional proteomics, and applications of proteome studies will be discussed. Intended for first and second year graduate students and others with an interest in proteomics and mass spectrometry.
Taught by: Speicher and Garcia
Course offered spring; even-numbered years
Activity: Lecture
0.5 Course Units
Notes: Course meets for 8 weeks and is offered for 1/2 credit

BMB 627 Computer Programming for Biochemists and Biophysicists
An introductory course on programming and algorithms for scientists with an emphasis on applications to biophysics. Students will learn to write, debug, and execute basic programs through lectures, in-class workshops, and programming projects outside of class.
Taught by: Sharp and Van Duyn
Prerequisites: Permission of instructor for nonBMB students.
Activity: Lecture
0.5 Course Units
Notes: Course meets for eight weeks and is offered for 1/2 credit.
BMB 632 Probing Structure and Function of Complex RNA-Protein Machines
RNA-Protein complexes or RNP can range from simple assemblies to megadalton enzymatic machines. The latter include two of the most abundant and essential enzymatic complexes for converting genes to functional protein-the ribosome and the spliceosome. Understanding the molecular interactions that hold these RNP together and how these complexes function has required the development of new techniques and pushed the boundaries of quantitative biochemistry. In this course we will take an in-depth look at general concepts common to many RNA binding proteins, the methods used to study protein-RNA and RNA-RNA interactions, and how the complex nature of large RNP uniquely allow them to achieve their precise functions. The course will be a combination of both lectures and student-lead discussion of recent literature. Students will be evaluated based on their presentations of primary literature and their participation in class discussion.

Taught by: Lynch
Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

BMB 650 Current Biochemical Topics
Participation in the "Dr. George W. Raiziss Biochemical Rounds", a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions.

Taught by: Black and Shorter
Course offered summer, fall and spring terms
Also Offered As: CAMB 702, PHRM 650
Prerequisite: Permission needed from Department
Activity: Seminar
1 Course Unit

BMB 699 Laboratory Rotation
Supervised "mini-projects" for graduate students in Biochemistry and Molecular Biophysics. End of the semester requirements are 1) poster presentations; 2) written rotation summaries; or 3) talks. Course is offered fall, winter, spring, and summer semesters.

Taught by: Kohli
Course offered summer, fall and spring terms
Activity: Laboratory
1 Course Unit

BMB 705 Candidacy Exam Preparation Course
This course is designed for second year BMB students to prepare them for the Candidacy Examination, which must be completed in the spring semester of the second year.

Taught by: Marmorstein, Lynch and Nelson
Course usually offered in spring term
Activity: Seminar
0.5 Course Units
Notes: Course meets for 8 weeks at the beginning of the spring semester, for 1/2 credit.

BMB 751 Chemical Biology
One term course offered either term
Also Offered As: CHEM 751
Activity: Lecture
1 Course Unit

BMB 799 Independent Study (Yrs 1 - 2)
Activity: Independent Study
1 Course Unit

BMB 899 Pre-Dissertation Research
One term course offered either term
Activity: Independent Study
1 Course Unit

BMB 990 Master's Thesis Research
One term course offered either term
Activity: Masters Thesis
1 Course Unit
Notes: See Department for section numbers

BMB 995 Dissertation Research
Activity: Dissertation
1 Course Unit
Notes: See Department for section numbers

Biochemistry (BCHE)

BCHE 280 Physical Models of Biological Systems
Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light; superresolution and other new microscopy methods; and vision and other modes of sensory transduction.

Course usually offered in fall term
Also Offered As: PHYS 280
Prerequisites: PHYS 101 (or higher), MATH 104-MATH 114 or MATH 104-MATH 115 or MATH 116. Recommended: previous or concurrent PHYS 102; basic background in chemistry and biology.
Activity: Lecture
1 Course Unit

BCHE 299 Undergraduate Research Projects
Independent Research.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

BCHE 300 Senior Research Projects
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: 10-20 h., 1-2 c.u., admission by permission of the biochemistry undergraduate chairman.

BCHE 404 Biochemistry Laboratory
Participation in research projects in the laboratories of individual faculty members. A list of possible research supervisors is available in the Biochemistry office (351 Chemistry). In addition to their laboratory projects, students will attend a weekly seminar in which their own and related work will be discussed.
Two terms. student must enter first term.
Activity: Seminar
1 Course Unit
Notes: Year long course-initial registration must occur in Fall term, 0 c.u. for first term and 2 c.u. for second term, 15h. CHEM 451 or permission of instructor required.
**Bioengineering (BE)**

**BE 100 Introduction to Bioengineering**
Survey course introducing students to the breadth of bioengineering. Course consists of introductory lectures, guest speakers/panelists, and a series of small assignments that allow students to explore different facets of bioengineering and the Penn Bioengineering program.
Course usually offered in fall term
Corequisites: MATH 104, PHYS 140 or 150.
Activity: Lecture
0.5 Course Units
Notes: Freshmen Only.

**BE 101 Introduction to Bioengineering II**
Introduction to Bioengineering II. Continuation of the freshman introductory bioengineering course. This course introduces students to the design process and emphasizes its role in engineering.
Course usually offered in spring term
Prerequisite: BE 100
Activity: Lecture
0.5 Course Units
Notes: Freshmen Only

**BE 200 Introduction to Biomechanics**
This course investigates the application of statics and strength of materials to soft and hard biologic tissues. The course will cover simple force analyses of the musculoskeletal system and introduces the fundamentals of the mechanics of materials including axial loading, torsion and bending and their application to biomechanics. The lecture and recitation will be complemented with hands-on examples emphasizing connections between theoretical principles and practical applications.
Course usually offered in fall term
Prerequisites: MATH 114, PHYS 140, or PHYS 150
Corequisite: MATH 240
Activity: Lecture
1 Course Unit

**BE 220 Biomaterials**
This course investigates the application of materials science and engineering to biomedical applications, with a focus on polymers, ceramics, and metals. The course will cover concepts related to basic material fabrication and synthesis, structure and property characterization, as well as applications of biomaterials. The lecture and recitation will be complemented with laboratory examples of material assessment and characterization.
Course usually offered in spring term
Prerequisites: BE 200, CHEM 102
Activity: Lecture
1 Course Unit

**BE 225 Technology and Engineering in Medicine**
The course is appropriate for engineering and natural science majors including premeds. The prerequisites will not be waived. This course will provide an examination of technology with emphasis on engineering design and its impact on medicine and health. Planned topics change from year to year and include, for example, cochlear implants and visual sensory rehabilitative devices. The course includes homework and reading assignments. Every student presents a paper on a relevant biomedical technology and the underlying science and engineering design.
One term course offered either term
Prerequisites: MATH 114, PHYS 140 and 141 or PHYS 150 and 151 or PHYS 170 and 171; sophomore and higher only.
Activity: Seminar
1 Course Unit

**BE 301 Bioengineering Signals and Systems**
Properties of signals and systems; Examples of biological and biomedical signal and systems; Signal operations, continuous and discrete signals; Linear, time invariant systems; Time domain analysis; Systems characterized by linear constant-coefficient differential equations; Fourier analysis with applications to biomedical signals and systems; Introduction to filtering; Sampling and the sampling theorem. Examples vary from year to year, but usually include signals such as the ECG and blood pressure wave, principles of signal coding in the auditory system and cochlear implants, and simple applications in biomedical imaging.
One term course offered either term
Prerequisites: MATH 241, PHYS 141 or 151, ENGR 105 can be taken as a prerequisite or corequisite.
Activity: Lecture
1 Course Unit

**BE 305 Engineering Principles of Human Physiology**
This course presents a quantitative, biophysical approach to physiology, focusing on the nervous, cardiovascular, and pulmonary systems. We will also emphasize computational modeling and analysis of physiological systems.
Course usually offered in spring term
Prerequisites: MATH 240 and ENGR 105 (or equivalent).
Activity: Lecture
1 Course Unit
BE 306 Molecular Physiology and Cellular Engineering from Atoms to Disease
This course explores physical biology of the cell across several length and timescales, while simultaneously emphasizing molecular specificity and clinical implications such as disease outcome or biomedical applications. The course emphasizes how the basic tools and insights of engineering, physics, chemistry, and mathematics combined with "Big Data" can illuminate the study of molecular and cell biology to make predictive biomedical models and subject them to clinical validation. Drawing on key examples and seminal experiments from the current clinical literature, the course demonstrates how quantitative models can help refine our understanding of existing biological data and also be used to make useful clinical predictions. The course blends traditional models in cell biology with the quantitative approach typical in engineering, in order to introduce the student to both the possibilities and boundaries of the emerging field of physical systems biology. While teaching physical model building in cell biology through a practical, case-study approach, the course explores how quantitative modeling based on engineering principles can be used to build a more profound, intuitive understanding of cell biology. Lab modules will be embedded in the lectures and all labs will be in silico (or computational) in nature.
Course usually offered in fall term
Prerequisites: CHEM 102, MATH 241, PHYS 140,141, BIOL 121
Activity: Lecture
1 Course Unit

BE 309 Bioengineering Modeling, Analysis and Design Laboratory I
BE 309 is a one course-unit laboratory course with a focus on combining experimental and mathematical approaches to understand biological systems and solve bioengineering problems. The course content integrates concepts from mathematics, physics, signal analysis, control engineering, mass transport, and heat transfer with applications in physiology and pharmacology. Areas of emphasis are model development and validation, statistical analysis, experimental design, error analysis and uncertainty, and scientific writing.
Course usually offered in fall term
Prerequisites: ENGR 105, PHYS 141 or PHYS 151, MATH 240, BE 200, BE 220, ENM 375 or equivalent.
Activity: Lecture
1 Course Unit

BE 310 Bioengineering Modeling, Analysis and Design Laboratory II
BE 310 is a one course-unit laboratory course on the design of technology to measure and control biological systems. The course is divided into four modules: (i) microfluidics for point of care diagnostics, (ii) synthetic biology for predicting cellular behavior, (iii) electronics and signal analysis of bioelectrical signals, and (iv) bioanalytical spectroscopy for low-cost diagnostics. Each module will have two components: (i) a series of structured learning exercises to teach key concepts and methods of the topic that we are studying, and (ii) a design challenge, in which the understanding gained in the first component is used to design a solution to an open ended bioengineering challenge.
Course usually offered in spring term
Prerequisites: ENGR 105, PHYS 141,151, BE 220, BIOL 121,123, MATH 240, ENM 375 (or equivalent)
Corequisites: MATH 241, BE 301
Activity: Laboratory
1 Course Unit

BE 324 Chemical Basis of Bioengineering II
Advanced topics in physical chemistry including solution and colloid chemistry, electrochemistry, surface phenomena, and macromolecules applied to biological systems.
Course usually offered in fall term
Prerequisites: PHYS 140, 141 or 150, 151, MATH 240, CHEM 101, 102
Activity: Lecture
1 Course Unit

BE 330 Self Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, eggs); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food. About four active learning activities will be included.
One-term course offered either term
Also Offered As: MSE 330
Prerequisites: CHEM 102 or equivalent; MSE 220 or BE 220 or introductory physical chemistry course.
Activity: Lecture
1 Course Unit

BE 350 Introduction to Biotransport Processes
Introduction to basic principles of fluid mechanics and of energy and mass transport with emphasis on applications to living systems and biomedical devices.
Course usually offered in spring term
Prerequisites: MATH 240, PHYS 140 or 150, BE 200
Activity: Lecture
1 Course Unit

BE 400 Preceptorship in Clinical Bioengineering
Introduction to the integration of biomedical engineering in clinical medicine through lectures and a preceptorship with clinical faculty. This course is for BE majors ONLY, with preference given to BSE students.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Junior and Senior BE majors only

BE 455 Continuum Biomechanics
Continuum mechanics with applications to biological systems. Fundamental engineering conservation laws are introduced and illustrated using biological and non-biological examples. Kinematics of deformation, stress, and conservation of mass, momentum, and energy. Constitutive equations for fluids, solids, and intermediate types of media are described and applied to selected biological examples. Class work is complemented by computational laboratory experiences.
Course usually offered in fall term
Also Offered As: MEAM 455
Prerequisite: MATH through 241; BE 200 or MEAM 210; BE 350 or MEAM 302
Activity: Lecture
1 Course Unit
BE 470 Medical Devices
Lab-based course where students learn the fundamentals of medical device design through hands-on projects using microcontrollers. Students first learn basic design building blocks regularly employed in microcontroller-based medical devices, and then carry out a small design project using those building blocks. Projects are informed by reverse-engineering of competing products, FDA regulations, and marketplace considerations.
Course usually offered in spring term
Prerequisites: Junior or Senior BE Majors only, ENGR 105, permission of the instructor
Activity: Laboratory
1 Course Unit
Notes: Students who have taken ESE 350 or a similar course may not enroll

BE 480 Introduction to Biomedical Imaging
Introduction to the mathematical, physical and engineering design principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging, and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem. The Radon transform and related transforms. Filtered backprojection and other reconstruction algorithms. Bloch equations, free induction decay, spin echoes and gradient echoes. Applications include one-dimensional Fourier magnetic resonance imaging, three-dimensional magnetic resonance imaging and slice excitation.
Course usually offered in spring term
Prerequisite: BE 301 or ESE 325
Activity: Lecture
1 Course Unit

BE 483 Molecular Imaging
This course will provide a comprehensive survey of modern medical imaging modalities and the emerging field of molecular imaging. The basic principles of X-ray, ultrasound, nuclear imaging, and magnetic resonance imaging will be reviewed. The course will also cover concepts related to contrast media and targeted molecular imaging. Topics to be covered include the chemistry and mechanisms of various contrast agents, approaches to identifying molecular markers of disease, ligand screening strategies, and the basic principles of toxicology and pharmacology relevant to imaging agents.
Course usually offered in fall term
Also Offered As: BE 583, MMP 507
Prerequisites: MATH 241, BIOL 215 or BE 305
Activity: Lecture
1 Course Unit

BE 490 Independent Project in Bioengineering
An intensive independent study experience on an engineering or biological science problem related to bioengineering. Requires preparation of a proposal, literature evaluation, and preparation of a paper and presentation. Regular progress reports and meetings with faculty advisor are required.
One-term course offered either term
Prerequisites: Sophomore, Junior and Senior BE majors only
Activity: Independent Study
1 Course Unit

BE 492 Independent Project in Bioengineering
Second semester of an independent project.
One-term course offered either term
Prerequisites: Sophomore, Junior and Senior BE majors only.
Activity: Independent Study
1 Course Unit

BE 495 Senior Design Project
Group design projects in various areas of bioengineering. Project ideas are proposed by the students in the Spring semester of the Junior year and refined during the Fall semester. The course guides the students through choosing and understanding an impactful biomedical problem, defining characteristics of a successful design solution to eliminate or mitigate a problem or fulfill a need, identifying and prioritizing constraints, creatively developing potential design solutions, iteratively refining design options, defining and implementing an optimal solution, and evaluating how well the solution fulfills the need. Final oral and written reports are required. Also emphasized are teamwork, project management, time management, regulations/standards, and effective communication.
Course usually offered in fall term
Prerequisite: Seniors in BE or Department Permission
Activity: Lecture
1 Course Unit

BE 496 Senior Design Project
Second semester of a two semester design project.
Course usually offered in spring term
Prerequisite: Seniors in BE or Department Permission
Activity: Lecture
1 Course Unit

BE 497 Senior Thesis in Biomedical Science
An intensive independent project experience incorporating both technical and non-technical aspects of the student's chosen career path. Chosen topic should incorporate elements from the student's career path electives, and may involve advisors for both technical and non-technical elements. Topics may range from biomedical research to societal, technological and business aspects of Bioengineering. A proposal, regular progress reports and meetings with a faculty advisor, a written thesis, and a presentation are required.
Course usually offered in fall term
Prerequisites: Seniors in BAS or Department Permission
Activity: Lecture
1 Course Unit

BE 498 Senior Thesis in Biomedical Science
Second semester of a year-long project.
Course usually offered in spring term
Prerequisite: Seniors in BAS or Department Permission
Activity: Lecture
1 Course Unit

BE 502 From Biomedical Science to the Marketplace
This course explores, through own work (this is, own discovery) the transition from fundamental knowledge to its ultimate application in a clinical device or drug. Emphasis is placed upon factors that influence this transition and upon the integrative requirements across many fields necessary to achieve commercial success. Special emphasis is placed upon entrepreneurial strategies, intellectual property, and the FDA process of proving safety and efficacy.
Course usually offered in fall term
Prerequisite: Graduate students or permission of the instructor
Activity: Lecture
1 Course Unit
BE 504 Biological Data Science II: Data Mining Principles for Epigenomics
This course will teach upper level undergraduates and graduate students how to answer biological questions by harnessing the wealth of genomic and epigenomic data sets generated by high-throughput sequencing technologies.
Course usually offered in spring term
Prerequisites: Graduate students or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 510 Biomechanics and Biotransport
The course is intended as an introduction to continuum mechanics in both solid and fluid media, with special emphasis on the application to biomedical engineering. Once basic principles are established, the course will cover more advanced concepts in biosolid mechanics that include computational mechanics and bio-constitutive theory. Applications of these advanced concepts to current research problems will be emphasized.
Course usually offered in spring term
Prerequisites: MATH 241, BE 200, 350
Activity: Lecture
1 Course Unit

BE 512 Bioengineering III: Biomaterials
This course provides a comprehensive background in biomaterials. It covers surface properties, mechanical behavior and tissue response of ceramics, polymers and metals used in the body. It also builds on this knowledge to address aspects of tissue engineering, particularly the substrate component of engineering tissue and organs.
Course usually offered in fall term
Prerequisites: General Chemistry, basic biomechanics
Activity: Lecture
1 Course Unit

BE 514 Rehab Engineering and Design
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients.
Course usually offered in fall term
Also Offered As: IPD 504
Prerequisite: Graduate students or permission of the instructor
Activity: Lecture
1 Course Unit

BE 515 Bioengineering Case Studies
This course has the unofficial title "What Makes Medical Technology Work?" We will examine biomedical devices and technologies with significant engineering components for use in breast cancer detection, for minimally invasive treatment of cancer and other disease, and applied neuroscience technologies for rehabilitation. Various factors that determine the success of particular medical systems will be discussed, including the "fit" of the technology with a medical need, testing for safety and efficacy, FDA premarket approval requirements, clinical studies used to assess the technology for evidence-based medicine. The class will examine successful and unsuccessful examples of these technologies. The course will require extensive reading of papers from the professional literature, group presentations and papers. BE seniors and graduate students are encouraged to enroll.
Course usually offered in fall term
Prerequisites: Graduate students or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 518 Optical Microscopy
Course usually offered in fall term
Prerequisites: MATH 240 or equivalent. Graduate students or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 521 Brain-Computer Interfaces
The course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and "hands-on" weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures.
Course usually offered in spring term
Also Offered As: NGG 521
Prerequisites: BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used the BE labs, BE 310). Some basic neuroscience background (e.g. BIOL 215, BE 305, INSC core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
Activity: Lecture
1 Course Unit
BE 530 Theoretical Neuroscience.
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students.
Course usually offered in spring term
Also Offered As: PHYS 585
Prerequisites: Knowledge of multivariable calculus, linear algebra and differential equations is required (except by permission of the instructor).
Prior exposure to neuroscience and/or Matlab programming will be helpful.
Activity: Lecture
1 Course Unit

BE 537 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomedical imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting-edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods.
Course usually offered in fall term
Also Offered As: CIS 537
Prerequisites: Math through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics
Activity: Lecture
1 Course Unit

BE 540 Biomolecular and Cellular Engineering
This course will introduce concepts and methods for the quantitative understanding of molecular and cellular phenomena. Topics include molecular recognition, receptor-ligand binding, viral infection, signal transduction, cell adhesion, motility, and cytoskeletal dynamics. The course requires mathematics at the level of differential equations, and some knowledge of Matlab programming. A basic knowledge of cell biology is suggested, although not required.
One term course offered either term
Also Offered As: CBE 540
Prerequisites: Graduate students or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 541 Engineering and Biological Principles in Cancer
This course provides an integrative framework and provides a quantitative foundation for understanding molecular and cellular mechanisms in cancer. The topics are divided into three classes: (1) the biological basis of cancer; (2) cancer systems biology; and (3) multiscale cancer modeling. Emphasis is placed on quantitative models and paradigms and on integrating bioengineering principles with cancer biology.
Course usually offered in spring term
Also Offered As: CBE 541
Prerequisite: Seniors in BE or permission of the instructor
Activity: Lecture
1 Course Unit

BE 546 Fundamental Techniques of Imaging I
This course covers the fundamentals of modern techniques in biological and in vivo biomedical imaging. This practical course consists of a series of hands-on lab exercises, covering major imaging modalities, but also extends to non-radiology modalities of interest in biological, pathological or animal imaging (e.g., optical imaging). Topics include x-ray, mammography, CT, proton therapy, radiation safety and brachytherapy. The emphasis will be on hands-on aspects of all areas of imaging and imaging analysis. Small groups of students will be led by a faculty member with technical assistance as appropriate.
Course usually offered in spring term
Prerequisites: Graduate students or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 547 Fundamental Techniques of Imaging II (BE 483/583 or MMP 507 preferred).
This laboratory course covers the fundamentals of modern medical imaging techniques. Students will participate in a series of hands-on exercises, covering the principals of X-ray imaging, CT imaging, photoacoustic imaging, diffusion tensor imaging, localized magnetic resonance (MR) spectroscopy, MR contrast agents, diffuse optical spectroscopy, and bioluminescence imaging. Each lab is designed to reinforce and expand upon material taught in BE483/583 Molecular Imaging and MMP507 Physics of Medical Imaging
Course usually offered in spring term
Prerequisites: Graduate students or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 550 Continuum Tissue Mechanics
This course introduces tensor calculus and continuum mechanics, with a focus on finite-deformation behavior of biological tissues including skin, tendon/ligament, cartilage, bone, blood vessels, nerves.
Course usually offered in spring term
Prerequisite: Senior/Graduate Student in Bioengineering or permission of the instructor
Activity: Lecture
1 Course Unit

BE 551 Biomechanics
The focus of this course is on microfluidics for biomedical applications. Topics to be covered in the first half of this course include microscale phenomena, small-scale fabrication techniques, and sensing technologies that are often leveraged in the development of microfluidic systems for the study of biomolecules, cells, tissues, and organs in living biological systems. In the second half of this course, strong emphasis will be placed on the application of microfluidics in cell biology, bioanalytical chemistry, molecular biology, tissue engineering, and drug discovery.
Course usually offered in fall term
Prerequisites: Experience with an undergraduate level fluid mechanics course is preferred. Examples of relevant SEAS courses include BE 350 (Biotransport), CBE 350 (Fluid Mechanics), and MEAM 302 (Fluid Mechanics).
Activity: Lecture
1 Course Unit
BE 553 Principles, Methods, and Applications of Tissue Engineering
Tissue engineering demonstrates enormous potential for improving human health. This course explores principles of tissue engineering, drawing upon diverse fields such as developmental biology, cell biology, physiology, transport phenomena, material science, and polymer chemistry. Current and developing methods of tissue engineering, as well as specific applications will be discussed in the context of these principles. A significant component of the course will involve review of current literature within this developing field.
Course usually offered in spring term
Prerequisite: Graduate Standing or instructor's permission
Activity: Lecture
1 Course Unit

BE 554 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Course usually offered in fall term
Also Offered As: CBE 554
Prerequisites: Graduate standing, Senior standing, Admitted Junior submatriculants
Activity: Lecture
1 Course Unit

BE 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and 'polymers' - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano-thru micro-scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology.
Course usually offered in fall term
Also Offered As: CBE 555, MEAM 555
Prerequisites: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 558 Principles of Biological Fabrication
BE 558 introduces methodological approaches that are currently used for the de novo construction of biological molecules - primarily, nucleic acids and proteins - and how to use these molecules to engineer the properties of cells and intact tissue. By the end of the semester, students should (i) possess a molecular-scale understanding of key biological synthesis (ii) and assembly processes, (iii) gain an intuition for how to create novel (iii) methodologies based on these existing processes, and (iv) appreciate (iv) the drivers of technology adoption (e.g. cost, time, ease, and (v) reproducibility). Throughout the course, we will place the material in context of applications in bioengineering and human health, including; protein engineering, drug discovery, synthetic biology & optogenetics, bio-inspired materials, and bio-electronic devices.
Course offered fall; odd-numbered years
Prerequisites: Graduate standing or permission of the instructor.
Undergraduate level biology, physics and chemistry.
Activity: Lecture
1 Course Unit

BE 559 Multiscale Modeling of Chemical Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (A, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling.
Course not offered every year
Also Offered As: CBE 559, SCMP 559
Prerequisites: Undergraduate courses in numerical analysis and statistical mechanics.
Activity: Lecture
1 Course Unit

BE 561 Musculoskeletal Biology and Bioengineering
The goal of this course is to educate students in core principles and expose them to cutting-edge research in musculoskeletal biology and bioengineering through (1) lectures covering the basic engineering principles, biological fundamentals, and clinical practices involved in the function, repair, and regeneration of the musculoskeletal tissues; (2) critical review and presentation by student groups of recent and seminal publications in the field related to the basic science, translation, and clinical practice of musculoskeletal biology and bioengineering, with discussion input by faculty members with relevant expertise. This course will place an emphasis on delivering multidisciplinary knowledge of cell and molecular biology, mechanics, material science, imaging, and clinical medicine as it relates to the field of musculoskeletal bioengineering and science.
Course offered fall; odd-numbered years
Prerequisites: Graduate student standing in Engineering and/or CAMB. Undergraduate students with permission of the instructor.
Activity: Lecture
1 Course Unit
BE 562 Drug Discovery and Development
Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS); Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menten Reaction; Competitive Inhibitor; FLI, FRET, TRF, FP SPA, alpha-screen; Enzyme HTS (pro tease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization.
Course usually offered in spring term
Also Offered As: CBE 562
Prerequisite: Graduate standing or permission of the instructor
Activity: Lecture
1 Course Unit

BE 566 Network Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are coupled together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry.
Course usually offered in spring term
Also Offered As: ESE 566
Prerequisites: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Activity: Lecture
1 Course Unit

BE 567 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB.
One term course offered either term
Also Offered As: AMCS 567, CGB 567
Prerequisites: Graduate standing or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 568 Causality for Medicine and Biology
The goal of this course is to introduce students to the analysis of data which aims at understanding causal relations. Within biomedical research there are randomized experiments that effortlessly get at certain kinds of causality but generally only allow low-dimensional probing. There are also observational studies that generally do not meaningfully get at causality. The field of econometrics has worked out a great deal of approaches that meaningfully allow the estimation of causality without randomized experiments. This set of techniques is largely unknown in much of biology and medicine. We will thus review the econometric approaches with an eye towards applications to biology and medical problems. We will also review ways of infusing these techniques with machine learning approaches to obtain more meaningful estimates.
One term course offered either term
Activity: Lecture
1 Course Unit

BE 570 Biomechatronics
Mechatronics is the combination of mechanical, electrical and computer engineering principles in the design of electromechanical systems. Biomechatronics is the application of these principles to human biology and includes orthopaedic, hearing, respiratory, vision and cardiovascular applications. In this hands-on, project-based course, these biomechatronic systems will be explored. Students will learn the basic mechanical and electrical elements needed to complete a biomechatronic design challenge including basic circuits, design considerations, material fabrication, microcontrollers and mechanisms (e.g. converting rotational motion into linear motion). Students will carry out a final design project utilizing these building blocks.
Course usually offered in fall term
Prerequisites: A first course in programming (Matlab and/or C++ preferred), Senior standing in BE or permission of the instructor
Activity: Lecture
1 Course Unit

BE 581 Techniques of Magnetic Resonance Imaging
Detailed introduction to physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are: Bloch equations, spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, imaging, induced magnetism, flow encoding, diffusion and perfusion, high-field MRI and a discussion of the most relevant clinical applications.
Course offered spring; odd-numbered years
Also Offered As: MBM 581
Prerequisites: Graduate standing or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 583 Molecular Imaging
This course will provide a comprehensive survey of modern medical imaging modalities and the emerging field of molecular imaging. The basic principles of X-ray, ultrasound, nuclear imaging, and magnetic resonance imaging will be reviewed. The course will also cover concepts related to contrast media and targeted molecular imaging. Topics to be covered include the chemistry and mechanisms of various contrast agents, approaches to identifying molecular markers of disease, ligand screening strategies, and the basic principles of toxicology and pharmacology relevant to imaging agents.
Course usually offered in fall term
Also Offered As: BE 483, MMP 507
Prerequisites: MATH 241, BIOL 215 or BE 305
Activity: Lecture
1 Course Unit
BE 584 Mathematics of Medical Imaging and Measurements
In the last 25 years there has been a revolution in image reconstruction techniques in fields from astrophysics to electron microscopy and most notably in medical imaging. In each of these fields one would like to have a precise picture of a 2 or 3 dimensional object which cannot be obtained directly. The data which is accessible is typically some collection of averages. The problem of image reconstruction is to build an object out of the averaged data and then estimate how close the reconstruction is to the actual object. In this course we introduce the mathematical techniques used to model measurements and reconstruct images. As a simple representative case we study transmission X-ray tomography (CT). In this context we cover the basic principles of mathematical analysis, the Fourier transform, interpolation and approximation of functions, sampling theory, digital filtering and noise analysis.
Course not offered every year
Also Offered As: MATH 584
Prerequisites: MATH 314, MATH 508 and 509 or permission of the instructor.
Activity: Lecture
1 Course Unit

BE 597 Master's Thesis Research
For students working on an advanced research program leading to the completion of master’s thesis.
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

BE 599 Master's Independent Study
The purpose of BE 599 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Independent study is NOT a research or design project, it is a one-on-one or small-group course with a professor. The course should require an effort comparable to that of a regular course, about 10-12 hours per week. A paper or presentation is required
One-term course offered either term
Activity: Independent Study
1 Course Unit

BE 608 Translational Therapeutics
To provide an in-depth view of the process by which scientific discoveries are commercialized. This course covers discovery in the laboratory, technology transfer, regulatory, financial, and managerial issues involved in moving a technology from the lab into the market place. The course contents fall into three broad categories: (1) examples of scientific discoveries that are candidates for commercialization, (2) fundamental elements of technology transfer, such as intellectual property protection and licensing, and (3) aspects of commercialization, such as regulatory approval, financing, and startup formation. In using this structure, the course provides parallel coverage of both the science and the commercialization process, in such a way that the elements of one contribute to the student’s experience in learning the other.
Course usually offered in spring term
Also Offered As: MTR 620
Prerequisite: Engineering students only or permission of the instructor
Activity: Lecture
1 Course Unit

BE 640 The Extracellular Matrix
This course is geared towards first and second year graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty.
Course offered spring; even-numbered years
Also Offered As: CAMB 703
Prerequisites: BIOM 600. Graduate students only.
Activity: Lecture
1 Course Unit

BE 650 Advanced Biomedical Imaging Applications
The course will cover a broad range of biomedical imaging technologies including X-ray, MRI, US, molecular and optical imaging. The curriculum will focus on the design of biomedical imaging based research studies spanning from basic technology development through clinical trials. This discussion oriented course is expected prepare students for integrating imaging technology and biomedical concepts to answer biological and medical questions.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

BE 652 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basics of distribution function theory.
Course usually offered in spring term
Also Offered As: CBE 618, MEAM 662
Prerequisites: Graduate Standing or permission of the instructor
Activity: Lecture
1 Course Unit

BE 699 Bioengineering Seminar
This is a required course for BE PhD candidates and involves attendance at seminars related to bioengineering topics, which can be either within the departmental seminar series or through other relevant seminar series on campus. The goal is to expose students to a breadth of bioengineering topics beyond their specific dissertation work. Students are required to submit summaries of the attended seminars to receive course credit.
One-term course offered either term
Activity: Seminar
0.5 Course Units
**BE 711 Integrative Plant and Animal Mechanobiology**
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Modules include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class.
Course usually offered in fall term
Also Offered As: CAMB 711
Corequisite: Undergraduate requires special permission
Activity: Lecture
1 Course Unit

**BE 899 PhD Independent Study**
The purpose of BE 899 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Rather than a research or design project, BE 899 is a one-on-one or small-group course with a professor. Students must submit a proposal outlining the study area along with the professor's approval. A paper or presentation is required.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Graduate Students Only

**BE 990 Masters Thesis**
For Master's students who have completed the course requirements for the Master's degree and are strictly working to complete the Master's Thesis leading to the completion of a Master's degree. Permission Required.
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

**BE 995 Doctoral Dissertation Status**
Ph.D. Students register for Doctoral Dissertation Status after they have advanced to Ph.D. candidacy by completing the Candidacy Exam which consists of the Dissertation Proposal Defense. Permission required
One-term course offered either term
Prerequisites: For Ph.D. Candidates only
Activity: Dissertation
1 Course Unit

**BE 999 Thesis/Dissertation Research**
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Bioethics (BIOE)

**BIOE 282 Lying, Cheating, Stealing, and Killing: How to Think About Professional Ethic**
Professionals - in business, medicine, law, and politics - face myriad ethical dilemmas in their daily work life that challenge, and sometimes conflict with, the moral commitments that guide their everyday life. This course systematically examines the ethical dimensions of these four professional roles, asking questions such as: Are there limits to what we should say? How far should competitors go to "win"? Who should get ventilators in a flu pandemic? Is it morally permissible for physicians to assist in suicide? Should lawyers represent terrorists or child killers? How far does attorney-client privilege go? Is it morally justifiable to torture enemy combatants? Should politicians lie?
Taught by: Allen/Emanuel/Hirschmann/Strudler
Also Offered As: PSCI 282
Activity: Lecture
1 Course Unit

**BIOE 401 Introduction to Bioethics**
Course usually offered in fall term
Also Offered As: BIOE 601
Activity: Lecture
1 Course Unit

**BIOE 402 Foundations of Bioethics**
This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various versions of deontological theories, utilitarianism, virtue ethics, principlism, casuistry, feminist ethics, narrative theory, and pragmatism.
Also Offered As: BIOE 602
Activity: Lecture
1 Course Unit
BIOE 505 Sex and Bioethics
While the topics of sex and sexuality have a long and storied history in medical culture, they have been especially complex and problematic in the past century. With the creation of distinct sexually-minded medical fields since the late 19th-century including sexology, psychiatry, and hormonal studies, medicine has also occasioned the very categories and labels of the homosexual, the hermaphrodite, the invert, and the nymphomaniac, to name a few. While medical historians and queer theorists have paid almost obsessive attention to these subjects, bioethicists have intervened to a lesser degree and on only a handful of relevant subjects. In this course, we will address the range of historical and theoretical matters that speak to this intersection of bioethics and sex, paying special attention to the health concerns of lesbian, gay, bisexual, trans, queer, and intersex (LGBTQ) persons. Who has sex with whom? What does it mean to pathologize or diagnose such desires? How do we raise the stakes when considering persons who question their sex or who are in sexual transition? And how do such questions reveal the dilemmas of bioethicists at large, not just those related to matters of sex and sexuality? Accordingly, this course will consider a range of historical and contemporary topics which speak to the ethical dilemmas of the intersection of medicine, sex, and sexuality, including: the gay adolescent, the intersex person, gay-conversion therapies, the prospect of gay gene studies, sex addiction, and blood/organ donation policies in wake of the HIV/AIDS pandemic. Specifically, we will focus on literary sources (poetry, memoirs, diaries, and films) as well as on non-literary accounts (medical texts, bioethical scholarship, legal cases, and historical records) that explore the emotional and somatic aspects of matters related to sex and bioethics.

Activity: Lecture
1 Course Unit

BIOE 540 Challenging Clinical Ethics: Managing patient/caregiver conflicts through mediation.
The contemporary healthcare system in which patients, families, institutions and a multiplicity of caregivers interact over matters of life and death with legal, ethical, emotional and scientific complexities inherently gives rise to a variety of disputes. Such disputes are frequently highly charged and are often emergent in nature. In recent years, mediation has grown exponentially as a dispute resolution mechanism of choice. Not surprisingly, the success of mediation and a wider understanding of the process, has led to its application in the realm of healthcare disputes with encouraging results. This course will initially provide an overview of classical mediation theory and practice. Students will be introduced to negotiation fundamentals critical to the practice of mediation. Similarities and differences between mediation in the healthcare field, as distinct from other contexts, will be examined. All class members will participate in mediation role-plays designed to simulate disputes of the kind prevalent in healthcare landscape

Taught by Bergman
Course not offered every year
Prerequisites: None.
Activity: Lecture
1 Course Unit

BIOE 545 Mediation Intensive I
Students will be placed in a variety of clinical situations in which they will play the roles of disputants and mediators, with ongoing discussions and critiques of mediator performance. Each student will be videotaped during their mediation to elicit feedback from the group and to catalyze self-criticism. As distinct from the course, BIOE 540: Challenging Clinical Ethics, in which negotiation and mediation theory are taught as a prelude to clinical simulations, this course references the literature solely in relation to problems encountered in the hands-on mediation of specific cases. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Prerequisites: There are no prerequisites for this course.
Activity: Seminar
1 Course Unit

BIOE 546 Mediation Intensive II
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I, but the Mediation Intensive II will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Prerequisites: There are no prerequisites for this course.
Activity: Seminar
1 Course Unit

BIOE 547 Mediation Intensive III
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I and II, but Med. intensive III will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.

Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Activity: Seminar
1 Course Unit
BIOE 548 Mediation Intensive IV
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to earlier mediation intensives but the mediation intensive IV will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; use video-tapes of simulations to improve mediation techniques and strengthen interpersonal skills; receive constructive feedback in a supportive environment. Students may take the mediation intensives in any order; they do not need to be taken from 1 to IV. Students may take all 4 intensive courses, as the material will not be repeated.
Taught by: Edward J. Bergman, Autumn Fiester, Lance Wahlert
Prerequisite: None
Activity: Seminar
1 Course Unit

BIOE 550 Bioethics and Society
This set of courses will deal with bioethical issues in popular culture addressed from a social science perspective. Courses to be offered include: "Sociology of Bioethics," and "Media and the Doctor-Patient Relationship."
Taught by: MERZ,JON
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

BIOE 551 Sociological Topics in Bioethics
This set of courses provides a rigorous introduction to the use of sociological methods and perspective to address bioethical topics and issues. Past courses have included the "Sociology of Medicine," Medical Errors," and "Sociology of Jewish Bioethics."
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

BIOE 552 Anthropological Topics in Bioethics
This set of courses provides an introduction to the use of anthropological methods and approaches to address bioethical issues. Courses might include cross-cultural studies of medicine and doctoring, diversity and the culture of medicine, cross-cultural bioethics.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

BIOE 553 Historical Topics in Bioethics
This set of courses provides a historical perspective on the field of bioethics and/or key issues or areas within the field. Courses that might be offered include the history of medicine and the history of science.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

BIOE 555 Bioethics and Technology: Neuroethics
Activity: Lecture
1 Course Unit

BIOE 556 Evidence in Bioethics and Health Policy
The ability to critically appraise scholarly work is a necessary skill to effectively contribute to bioethics and health policy debates, and for development and implementation of health interventions. The object of this course is to provide students with the skills needed to become fluent in reading and assessment of empirical bioethics and health service research. The course will review and evaluate a wide range of qualitative and quantitative methods utilized in bioethics, health policy, and medical research. Specifically, students will learn the conceptual rational for standard qualitative and quantitative methods, their strengths and weaknesses. At course completion, students should be able to critically evaluate empirical research published in top bioethics, health policy, and medical journals.
Taught by: Maclean
Course usually offered in fall term
Activity: Lecture
1 Course Unit

BIOE 558 Reproductive Health
Whether dealing with personal decisions or public policy, reproductive health matters are almost always controversial and often intractable. It is almost 50 years since the Supreme Court decision Griswold v Connecticut "settled" the right to contraceptives yet the last several years have been marked by increasing legislative action and judicial review of this right. This course will explore the ethical dimensions of reproductive health controversies including: 1) the moral and legal status of the human embryo and fetus in the context of assisted reproduction, embryonic stem cell research and abortion; 2) contraception, including over-the-counter provision of emergency contraception and contraceptives and legislation challenges to contraceptive insurance coverage in the Affordable Care Act; 3) attempts to restrict access to abortion by restricting later term abortion, mandating informed consent and waiting periods, and regulating abortion clinics; 4) maternal-fetal relationship including prenatal testing and the regulation of women's behavior while pregnant; 5) assisted reproduction and 6) global concerns such as sex selective abortion, forced abortion and sterilization and reproductive rights in relation to population dynamics and environmental concerns.
Activity: Lecture
1 Course Unit
**BIoE 560 Clinical Approaches to Bioethics**
This set of courses examines issues in bioethics from the perspective of the practicing clinician, physician, nurse, or other health care professional. These courses will often use case studies or clinical experience to analyze or understand contemporary problems in bioethics. An example of such a course is "Clinical Dilemmas Through the Life Cycle."
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

**BIoE 565 Rationing**
You have one liver but three patients awaiting a liver transplant. Who should get the liver? What criteria should be used to select the recipient? Is it fair to give it to an alcoholic? These are some of the questions that arise in the context of rationing and allocating scarce health care resources among particular individuals, what is called micro-allocation decisions. There are also macro-allocation decisions that focus on how health care systems distributes resources across populations. Using the cases of organs for transplantation, the rationing for vaccines in a flu pandemic, and oncology drug shortages, the course will critically examine alternative theories for allocating scarce resources among individuals. Using both the need to establish priorities for global health aid and to define an essential benefit package for health insurance, the course will critically examine diverse theories for macro-allocation from cost-effectiveness analysis to age-based rationing to accountability for reasonableness.
Taught by: Ezekiel Emanuel, Harald Schmidt
Prerequisite: None
Activity: Lecture
1 Course Unit

**BIoE 566 Personal Responsibility**
Activity: Lecture
1 Course Unit

**BIoE 570 Bioethics and Policy**
This set of courses will look at bioethological topics from either a legal or public policy perspective. Past courses have included: Ethics of Managed Care, Law, Medicine and Policy, and Legal Aspects of Healthcare in America.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

**BIoE 571 Global Health Policy**
This course considers various theoretical approaches to global justice and global governance and analyzes their implications for global health. The course includes two parts. The first part examines accounts of cosmopolitanism, nationalism, and other theories of global justice, critically assessing duties ascribed by each that may be owed universally to all persons or confined within associative boundaries of communities or nations. The second part explores applications to global health governance encompassing consideration of human rights and the operation and accountability of global institutions such as the United Nations, the International Monetary Fund, the World Bank, and the World Health Organization. The course scrutinizes the relevance of global justice for governing the global health realm, evaluating the current global health system and proposals for reforming it.
Activity: Lecture
1 Course Unit

**BIoE 572 Global Bioethics**
According to the WHO, around 30 million people with HIV/AIDS should receive antiretroviral treatment. But only 10 million do. Drugs containing tenofovir—the standard of care in developed countries are expensive. Stavudine-based treatments are much cheaper but have worse side-effects. Is it ethical to use stavudine-based rather than tenofovir-based treatments in sub-Saharan Africa? Smoking rates have decreased drastically in most developed countries. But they are increasing in many developing countries. Established public health measures are not implemented, and the tobacco industry pursues a range of marketing activities that would be unacceptable in developed countries. As a consequence, global deaths from smoking are expected to increase to 1bn by the end of the 21st century, with 80% of deaths in developing countries. Is industry's behavior immoral or normal in a global market?
ARDS is a disease of premature newborns. Is it ethical to test a new ARDS drug in Bolivia if the drug—if proven to be effective—will be very expensive and accessible only to the richest people in Bolivia and other developing countries? An overarching question that these different cases raise is whether there are universal ethical standards that should apply to all people, or whether regional variations should be acceptable. Universalists typically argue that there must be no double standards, and that people should be treated the same regardless of where they live. Pragmatists raise concerns about moral imperialism, neo-colonialism, or insufficient respect for cultural or other differences. Increasing globalization fuels debates about which of competing sets of moral standards is the right one. Looking at a range of diverse cases including healthcare research, health policy, flu pandemics, family planning, smoking and obesity policy, and genetically modified crops, this course explores controversies in the crosswinds of market forces, politics and ethics, and examines the roles and responsibilities of key actors and international policy guidance.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
BIOE 575 The Future of the American Health Care System: Health Policy and the Affordable Care Act
This course will provide students a broad overview of the current U.S. healthcare system. The course will focus on the challenges facing the health care system, an in-depth understanding of the Affordable Care Act, and its potential impact upon health care access, delivery, cost, and quality. The U.S. health care system is the world's largest, most technologically advanced, most expensive, with uneven quality, and an unsustainable cost structure. This multi-disciplinary course will explore the history and structure of the current American health care system and the impact of the Affordable Care Act. How did the United States get here? The course will examine the history of and problems with employment-based health insurance, the challenges surrounding access, cost and quality, and the medical malpractice conundrum. As the Affordable Care Act is implemented over the next decade, the U.S. will witness tremendous changes that will shape the American health care system for the next 50 years of more.
Taught by: Ezekiel Emanuel, J. Sanford Schwartz
Course usually offered in fall term
Also Offered As: HCMG 250, HCMG 850
Prerequisite: None
Activity: Lecture
1 Course Unit
Notes: Course open to graduate students and upper level undergraduates. Freshman and Sophomores may request permission to enroll. Email mbe-info@mail.med.upenn.edu

BIOE 578 Bioethics and Human Rights: Bioethics and Human Rights
Activity: Lecture
1 Course Unit

BIOE 580 Research Ethics
This class is intended to give students a broad overview of research ethics and regulation. The students will come out of the class with an understanding of the moral bases of scientific ethics and the historical evolution of biomedical research ethics. Students will be fully conversant with the development, implementation, and limitation of US human subjects regulation. The course will include reading assignments and lectures addressing the following topics: ethics and morality in science, science in society; scientific integrity; misconduct: from FFP to MM; conflicts of interest; collegiality; publication; and authorship; ethics codes and regulation; research with human subjects; historical review of human experimentation; human subjects regulation (HHS, FDA), Institutional Review Boards; informed consent, waivers, vulnerable populations, privacy and the confidentiality of records; and research on animals.
Taught by: Merz
Course not offered every year
Activity: Lecture
1 Course Unit

BIOE 590 Philosophical Topics in Bioethics
This set of courses provides a philosophical perspective on bioethical topics and issues. This can include courses that integrate ethical theory with concern for particular applications of theory or conceptual issues in medicine, health care, and the life sciences. Past courses have included Philosophy of Death and Dying, Genetics and Ethics, Philosophy of Medicine, Pragmatic Bioethics, and Feminism and Bioethics.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mbe.

BIOE 601 Introduction to Clinical Bioethics
This course is intended to serve as a broad introduction to the field of bioethics. The course will focus on three of the most important areas in bioethics: Genetics & Reproduction, Human Experimentation, and End-of-Life. Each module of the course will cover essential bioethics concepts, relevant legal cases, and classical readings of that theme. Each module will include one guest lecture from our distinguished bioethics faculty.
Taught by: Fiester
Course usually offered in fall term
Also Offered As: BIOE 401
Activity: Lecture
1 Course Unit

BIOE 602 Conceptual Foundations in Bioethics
This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various versions of deontological theories, utilitarianism, virtue ethics, principlism, casuistry, feminist ethics, narrative theory, and pragmatism.
Course usually offered in spring term
Also Offered As: BIOE 402
Activity: Lecture
1 Course Unit

BIOE 605 Mentored Research I
Activity: Masters Thesis
1 Course Unit

BIOE 606 Mentored Research II
Activity: Masters Thesis
1 Course Unit

BIOE 607 Mentored Research III
Activity: Masters Thesis
1 Course Unit

BIOE 608 Mentored Research IV
Activity: Masters Thesis
1 Course Unit

BIOE 996 Research Topics
This course serves the final MBE project. This course requires students to work with faculty to produce original research that is of publishable quality. Past students have published in Nature, Science, and other prominent journals. One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: This course is only open to students in the Master of Bioethics program.

BIOE 999 Independent Study
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: This course is only open to students in the Master of Bioethics program.
Biological Basis of Behavior (BIBB)

BIBB 030 Neurobiology of Brain Disorders
The human brain is clearly the most complicated and magical organ in the body. We don't completely understand how it works, but we do know, unfortunately, for a variety of reasons, the human brain is prone to failure, either by acute injury, chronic degeneration, genetic flaws in its composition, or unknown disturbances in its behavior. Diseases of the brain can take many forms but are all uniformly devastating for individuals, families, and our society, and are also very costly. This course will explore the ways in which various brain disorders (both neurological and psychiatric) manifest themselves and discuss their underlying neurobiological mechanisms. In addition, the social and economic impact of these diseases in society will be considered, as well as some well-publicized political issues surrounding many of these brain disorders.
Taught by: Dichter
Activity: Seminar
1 Course Unit

BIBB 050 Forensic Neuroscience
Progress in behavioral neuroscience and brain imaging techniques, such as functional and structural Magnetic Resonance Imaging (MRI) and Positron Emission Tomography (PET) has forced the courts to reconsider the role of behavioral sciences in courtroom decision-making. The goal of this course is to enable students to understand and interpret the use of behavioral neuro evidence in the justice system. The course will introduce the students to the relevant behavioral neuroscience constructs, principles of brain imaging and rules of scientific evidence. Students will be asked to use this introductory knowledge to critically evaluate the use of brain imaging and other behavioral neuroscience techniques as evidence in representative legal cases. For each case, students will serve as neuroscience experts for the defense or prosecution and prepare, present and defend their testimony against the opposing team. Through this course, students will develop the ability to critically evaluate brain imaging and other neuroscience data in forensic and legal settings.
Taught by: Langleben
Activity: Seminar
1 Course Unit

BIBB 060 Music and the Brain
Every human culture that has ever been described makes some form of music. The musics of different cultures cover a wide range of styles, but also display fascinating similarities, and a number of features are shared by even the most disparate musical traditions. Within our own culture, music is inescapable there are very few individuals who do not listen to some form of music every day and far more who listen to music virtually all day long. Appreciation of music comes very early; newborns prefer music to normal speech and mothers all over the world sing to their babies in a fundamentally similar way. And yet, despite this seeming ubiquity, the real origin and purpose of music remains unknown. Music is obviously related to language, but how? Why do so many cultures make music in such fundamentally similar ways? What goes into the formation of music “taste” and preferences? Does music have survival value, or is it merely “auditory cheesecake”, a superfluous byproduct of evolution as some critics have maintained? What is the nature of musical ability and how do musicians differ from non-musicians? In this course, we will look for answers by looking at the brain. Almost 200 years of scientific research into brain mechanisms underlying the production and appreciation of music is beginning to shed light on these and other questions. Although the sciences and the arts are often seen as entirely separate or even in opposition, studying the brain is actually telling us a lot about music, and studying music is telling us just as much about the brain.
Taught by: Kaplan
Activity: Seminar
1 Course Unit

BIBB 080 Brain Changes Through Tragedy and Triumph
There are currently major advances in understanding how the brain works. Whereas sixty years ago, it was believed that the mature brain was a fixed structure, recent research shows not only that the brain can change, but also that it changes continuously throughout life. An overview of neuroplasticity as it refers to change in the nervous system will be presented in this course. Major topics will regard an introduction to the brain anatomy necessary in explanations of neuroplastic changes that occur in response to the nerve injury and brain damage; a consideration of addiction and pain as conditions involving maladaptive forms of neuroplasticity; and an overview of lifelong brain changes illustrating neuroplasticity as a lifelong process.
Taught by: Jacqueline Cunningham
Activity: Lecture
1 Course Unit

BIBB 109 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological bases of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders.
For BA Students: Living World Sector
Taught by: Kane and McLean
One-term course offered either term
Also Offered As: BIOL 109, PSYC 109
Activity: Lecture
1 Course Unit
BIBB 150 Sex and Human Nature
This is an introduction to the scientific study of sex in humans. Within an evolutionary framework, the course examines genetic, physiological, ecological, social and behavioral aspects of sex in humans. After providing the basic principles of evolutionary biology, the course will examine the development of sexual anatomy and physiology. How is sex determined? How is orgasm achieved? Why do girls and boys develop sexually at different ages? The role of ecology and social life in shaping human mating patterns will be evaluated through the use of ethnographies and cross-cultural materials on a variety of human cultures. Does everybody have sex the way we do? Why marry? Are there biological bases for love? Why do we experience jealousy? Finally, topics relevant to human sexuality today will be discussed, such as recreational sex, contraception, and sexually transmitted diseases. Examples are drawn primarily from traditional and modern human societies; data from studies of nonhuman primates are also considered.
For BA Students: Living World Sector
Taught by: Schurr
Course usually offered in spring term
Also Offered As: ANTH 104, GSWS 103
Activity: Lecture
1 Course Unit

BIBB 160 ABCS of Everyday Neuroscience
This course is an opportunity for undergraduates to share their interest and enthusiasm for neuroscience with students in grades 9-12 attending urban public schools in West Philadelphia. The course will allow Penn students to develop their science communication and teaching skills. Students will prepare neuroscience demonstrations, hands-on activities, and assessment tools. In parallel, the course aims to engage local high school students, increasing their interest and knowledge in science, and ultimately promoting lifelong science literacy.
Taught by: Lori Flanagan-Cato
Prerequisite: BIBB109
Activity: Lecture
1 Course Unit

BIBB 217 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, anatomy and physiology of the visual pathways, retinal processing, properties of visual cortex, and color vision.
Taught by: Rust
Course usually offered in spring term
Also Offered As: PSYC 217, VLST 217
Prerequisites: BIBB 109, PSYC 001, COGS 001 or VLST 101
Activity: Lecture
1 Course Unit

BIBB 227 Physiology of Motivated Behaviors
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbooks as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for; obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.
Taught by: Grill
One term course offered either term
Also Offered As: PSYC 127
Prerequisite: PSYC001
Activity: Lecture
1 Course Unit

BIBB 231 Animal Behavior
The evolution of social behavior in animals, with special emphasis on group formation, cooperation among kin, mating systems, territoriality and communication.
Taught by: Seyfarth/Cheney
One term course offered either term
Also Offered As: BIOL 231, PSYC 231
Prerequisite: PSYC 001 or BIOL 102 or BIOL 122
Activity: Lecture
1 Course Unit

BIBB 233 Neuroethology
In course, students will learn how neurobiologists study the relationship between neural circuitry and behavior. Behaviors such as bat echolocation, birdsong, insect olfaction, spatial navigation, eye movement and others will be used to explore fundamental principles of brain function that include brain oscillations, population codes, efference copy, sensorimotor maps and sleep replay. The course will also discuss the various methodologies that are used to address these questions. The reading material will be derived mostly from the primary literature.
Taught by: McLean
Course usually offered in spring term
Prerequisite: BIBB 109
Activity: Lecture
1 Course Unit

BIBB 240 Chronobiology and Sleep
Topics to be covered include basic principles of chronobiology; neuroscience mechanisms of circadian rhythms and sleep; phylogeny and ontogeny of sleep; human sleep and sleep disorders; circadian dysfunction; circadian and sleep homeostatic influences in human health and safety.
Taught by: Dinges
Course usually offered in spring term
Prerequisite: BIBB109
Activity: Lecture
1 Course Unit
Notes: Students may not receive credit for both BIBB240 and BIBB040
BIBB 249 Cognitive Neuroscience
The study of the neuronal systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.
Taught by: Epstein
One term course offered either term
Also Offered As: PSYC 149
Prerequisite: PSYC 001 or BIBB 109
Activity: Lecture
1 Course Unit

BIBB 251 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development.
Taught by: Schmidt, M./Kaplan
Course usually offered in fall term
Also Offered As: BIOL 251
Prerequisites: BIOL 101 and 102, or BIOL 121; PHYS 102 or 151 strongly recommended
Activity: Lecture
1.5 Course Unit
Notes: (3hrs. lec., 3hrs. lab, 1.5 c.u.)

BIBB 260 Neuroendocrinology
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Taught by: Flanagan-Cato
One term course offered either term
Also Offered As: PSYC 239
Prerequisite: BIBB 109 or Permission of Instructor
Activity: Lecture
1 Course Unit

BIBB 269 Autonomic Physiology
This course will introduce the student to the functioning of the autonomic nervous system (ANS), which is critically involved in the maintenance of body homeostasis through regulation of behavior and physiology. The course will begin with a review of the basic anatomy and physiology of the ANS including the sympathetic, parasympathetic and enteric divisions. The mechanisms by which the ANS regulates peripheral tissues will be discussed, including reflex and regulatory functions, as will the effect of drugs which modulate ANS activity. The role of the ANS in regulating behavior will be addressed in the context of thirst, salt appetite and food intake. MONDAY MEETING ONLY ON-LINE
Taught by: Heering
Course usually offered in spring term
Prerequisite: BIBB 109
Activity: Lecture
1 Course Unit

BIBB 270 Drugs, Brain and Mind
The course will begin with a review of basic concepts in pharmacology including: routes of drug administration, drug metabolism, the dose response curve, tolerance and sensitization. Following a brief overview of cellular foundations of neuropharmacology (neuronal biology, synaptic and receptor function), the course will focus on several neurotransmitter systems and the molecular and behavioral mechanisms mediating the mind-altering, addictive and neuropsychiatric disorders, including depression, schizophrenia and anxiety with an emphasis on their underlying neurobiological causes, as well as the pharmacological approaches for treatment.
Taught by: Kane
Course usually offered in fall term
Also Offered As: PSYC 225
Prerequisite: BIBB 109 or PSYC 109
Activity: Lecture
1 Course Unit

BIBB 271 Primate Behavior and Ecology
This course explores the behavior of wild primates and the ecological models that attempt to explain the evolution of these behaviors. The evolution and taxonomy of primates will be reviewed, followed by a brief history of wild primate studies. We will then explore primate behavior through theoretical frameworks ranging from socioecological theory to sexual selection. Topics discussed include, but are not limited to, socioecology, aggression, kinship cooperation, reproductive strategies, cognition, and conservation. Those enrolled in 507 will have additional responsibilities assigned.
Taught by: Caitlin O'Connell
One term course offered either term
Also Offered As: ANTH 207
Prerequisites: ANTH 003 or consent of instructor. Undergraduates that would like to enroll as the 500 level need consent of instructor.
Activity: Lecture
1 Course Unit

BIBB 310 Laboratory in the Structure of the Nervous System
A laboratory course designed to familiarize the student with the fundamental gross and histological organization of the brain. The mammalian brain will be dissected and its microscopic anatomy examined using standard slide sets. Comparative brain material will be introduced, where appropriate, to demonstrate basic structural-functional correlations.
Taught by: McLean
One term course offered either term
Prerequisite: BIBB 109 or permission of instructor
Activity: Laboratory
1 Course Unit
Notes: Lab Fee: $50

BIBB 317 Comp Neuroscience Lab
Activity: Laboratory
1 Course Unit

BIBB 350 Developmental Neurobiology
This course will focus on cellular and molecular mechanisms of the organogenesis of the central nervous system. A goal of the course will be to understand the form, function and pathology of the adult nervous system in terms of antecedent developmental processes.
Taught by: Julie McGurk
One term course offered either term
Prerequisites: BIBB 109 and BIOL 101 or Permission of Instructor
Activity: Lecture
1 Course Unit
**BIBB 399 Independent Research**
Individual research of an experimental nature with a member of the standing faculty leading to a written paper. The grade is based primarily on a serious term paper describing original research carried out by the student. Students must submit a proposal prior to registering. During the semester, students must attend two seminars to discuss planning and independent research project, ethical concerns in research and writing a scientific paper. Attendance at the meetings is mandatory. Students doing more than one credit of independent study will be required to present a poster at the annual BIBB Symposium.

Taught by: Standing Faculty
One term course offered either term
Prerequisites: BIBB 109 and Permission of the Director
Activity: Independent Study
1 Course Unit

**BIBB 417 Seminar in Perception: Visual Processing**
This seminar will focus on how visual information is processed by the eye and the brain to produce visual perception. These issues will be explored through lectures and student presentations of journal articles, combined with Matlab-based tutorials and exercises. The course requires no prior knowledge of visual processing, math, or computer programming.

Taught by: Rust
One term course offered either term
Also Offered As: PSYC 417
Prerequisites: BIBB 109, Psych 149 or Psych 217, or permission of instructor
Activity: Seminar
1 Course Unit

**BIBB 420 Smell and Taste**
All organisms respond to chemicals in their environment. This chemosensation guides diverse behaviors such as a feeding, avoiding predators, sex, and social interactions. This course will provide a broad survey of our current understanding of taste and smell, focusing on insect and rodent model systems as well as studies in humans. The course will begin with a review of chemical signal transduction mechanisms, and build to an exploration of the cortical integration of chemical signals and chemical guided behaviors. Class time will emphasize primary literature, discussion, and student presentations. The goal is to reach an integrated understanding of the physiology and psychology of chemical sensory systems. In the process, students will learn to read and critically evaluate data from primary research articles.

Taught by: Lewandowski
Course not offered every year
Prerequisites: Introductory Psychology and Biology, BIBB 109, PSYC 111 (Perception) preferred.
Activity: Seminar
1 Course Unit

**BIBB 421 Functional Imaging of the Human Brain**
The course will provide a detailed overview of functional brain imaging and its potential uses. Issues regarding advantages and disadvantages of different modalities, study design image analysis & interpretation and how these relate to various neurological & psychological phenomena will be discussed. Class will cover the following specific topics in this general time frame: Introduction to functional brain function, basics of nuclear medicine imaging (including instrumentation, image acquisition, and radiopharmaceuticals for positron emission tomography and single photon emission computed tomography), imaging of neurological disorders, imaging of psychological disorders, introduction to activation studies, image analysis and statistical problems, study design, literature review, journal article presentation, tour of Penn imaging facilities, interpretation of imaging studies, implications for clinical and research, and implications for understanding the human mind and consciousness.

Taught by: Newberg
Course usually offered in spring term
Prerequisite: BIBB 109
Activity: Seminar
1 Course Unit

**BIBB 429 SEMINAR HUMAN MEMORY: Big Data, Memory, and the Human Brain**
Taught by: Kahana
Also Offered As: PSYC 429
Prerequisite: CISI 21 & Python experience
Activity: Seminar
1 Course Unit
Notes: Instructor permission required. Application form can be found here: http://psychology.sas.upenn.edu/undergraduate/forms

**BIBB 430 Neurobiological Basis of Autism**
This course examines the neurobiological processes underlying autism spectrum disorders. In this seminar course, we will first examine the brain phenotypes associated with Autism Spectrum Disorders (ASD), in addition to investigating the genetic and environmental contributions to the etiology and pathophysiology of ASD. After an initial examination of the clinical literature and research, we will focus on animal models of ASD, including those of syndromic causes of autism (Rett Syndrome, Tuberous Sclerosis, Fragile X) and investigate changes in neurotransmitter systems and synaptic dysfunctions in the brain of these models.

Taught by: Herringon
One term course offered either term
Prerequisite: BIBB 109
Activity: Lecture
1 Course Unit
BIBB 440 The Neuroscience behind the addiction to chocolate, wine, coffee and tobacco
Both clinical observations and popular culture support the idea that food might have addictive properties. Similar to the narrative for addictive drugs, individuals and the media use terms like “food addict” and “chocoholic” and refer to cravings, symptoms of withdrawal, and escalating patterns of eating that might be viewed as evidence of tolerance. The class will discuss chocolate and coffee as examples of so-called “addictive” food and compare their effects and mechanisms with those of alcohol and nicotine, two substances with well-characterized addictive properties. Furthermore, we will discuss why some forms of overeating are thought to reflect an addictive behavior. Considering the social dimension of alcohol, coffee, and tobacco consumption and the fact that large numbers of the population consume them together, we will also discuss the possible interactive effects of combinations of these psychoactive substances on mood and disease state. At the end of the course, the student will become familiar with the diagnostic criteria for substance dependence, the anatomy and physiology of the brain circuits involved in reward processing and drug dependence, and the neurotransmitter systems involved.
Taught by: Mariella De Biasi, PhD
One-term course offered either term
Activity: Lecture
1 Course Unit

BIBB 442 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Taught by: Abel
Also Offered As: BIOL 442, NGG 575, PSYC 421
Prerequisites: BIOL 251, BIBB 251 or Permission of Instructor
Activity: Seminar
1 Course Unit

BIBB 445 Information Representation
One-term course offered either term
Activity: Seminar
1 Course Unit

BIBB 451 Behavioral Genetics
This course covers basic principles of human and animal behavioral genetics, including normal variation and extreme phenotypes represented by behavioral, psychiatric and neurologic disorders. The course will focus on methods necessary to critically evaluate research findings on normal and abnormal human behavior. Animal models will also be reviewed. The first third of the course is in lecture format and reviews basic genetic methodologies as they apply to behavior. The remainder of the course is in seminar format and covers recently published work related to behavioral genetics.
Taught by: (c) Price
Course offered spring; odd-numbered years
Also Offered As: PSYC 407
Prerequisites: BIBB 109, Basic statistics or Permission of Instructor
Activity: Seminar
1 Course Unit

BIBB 460 Neuroendocrinology Seminar
This course is an upper-level seminar, designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health. The format will be a mixture of lectures and journal club discussions based on recent primary literature in the field of neuroendocrinology. Students will also write several short papers based on the clinical neuroendocrinology.
Taught by: Flanagan-Cato
One-term course offered either term
Also Offered As: PSYC 439
Prerequisite: BIBB 109 or Permission of Instructor
Activity: Seminar
1 Course Unit

BIBB 466 Molecular Genetics of Neurological Disease
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer’s, Fragile-X and autism, dementia, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers.
Taught by: Bonini
Also Offered As: BIOL 466
Prerequisites: BIOL 221 is required; BIOL 251 and BIOL 421 are recommended
Activity: Lecture
1 Course Unit

BIBB 469 Stress Neuroscience
Stress can be caused by a variety of conditions, ranging from low-level noise in the workplace to life-threatening situations and these stressors can cause changes in the physiology and behavior of individuals. This course will examine the neural mechanisms underlying physiological and emotional responses to stress in a journal club format. Topics to be covered include anxiety disorders, depression and other mood disorders, the differential effects of stress on males and females, the physiological effects of stress on the immune system and feeding behavior, the effects of male/male stress on offspring as well as strategies to mitigate the effects of stress.
Taught by: Heerdin
One-term course offered either term
Prerequisite: BIBB 109
Activity: Seminar
1 Course Unit
BIBB 470 Animal Models of Neuropsychiatric Disorders
This seminar will focus on the significant role of animal models in the investigation of the pathophysiology of a variety of human neuropsychiatric disorders as well as in the development of treatments for these disorders. The course will focus on the use of genetically modified mice in the investigation of Autistic Spectrum Disorders (ASD), anxiety and affective disorders, schizophrenia and obsessive-compulsive disorder (OCD), with an emphasis on the limitations of such models. Class time will consist of short lectures and open discussions via student-led presentations. Emphasis will be placed on the critical analysis of primary literature.
Taught by: Kane
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1 Course Unit

BIBB 473 Neuroeconomics
This course will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. A particular focus will be on how evidence about the neural processes associated with choices might be used to constrain economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, reinforcement learning, strategic interactions and games, and social preferences.
Taught by: Kable
Also Offered As: NGG 706, PSYC 473
Prerequisites: PSYC 149, 253, or 265
Activity: Seminar
1 Course Unit

BIBB 475 Neurodegenerative Diseases
This course will familiarize students with advances in our understanding of the clinical features and pathogenesis of a wide range of neurodegenerative diseases, including Alzheimer’s disease and other dementias, prion diseases, Parkinson’s disease and atypical parkinsonisms, neurodegenerative ataxias, motoneuron diseases, degenerative diseases with chorea, iron and copper disorders, and mitochondrial diseases. Students will analyze original research reports on a range of proposed pathological cellular processes that may represent steps in cell death pathways leading to neuron loss seen in these diseases. Significant emphasis will be placed on the fast-expanding field exploring genetic contributions to neurodegenerative disease, as identification of genetic mutations pathogenic for familial neurodegenerative diseases has been a major driving force in neurodegenerative research and pointed researchers towards essential molecular process that may underlie these disorders. Strategies for therapeutic intervention in the management, prevention, and cure of neurodegenerative disease will be addressed.
Taught by: Lexow
One-term course offered either term
Prerequisite: BIBB 109 or Permission of Instructor
Activity: Seminar
1 Course Unit

BIBB 479 Neural Systems and Behavior
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Taught by: Schmidt M./Medina
Course not offered every year
Also Offered As: BIOL 451, PSYC 479
Prerequisites: BIOL 251/BIBB 251 and permission of instructor
Activity: Lecture
1 Course Unit

BIBB 480 Biological Basis of Psychiatric Disorders
The contributions of basic sciences (neuroanatomy, neurophysiology, neurochemistry, and neuropharmacology) to an understanding of behavior and behavioral disorders will be covered and important psychiatric disorders will be discussed, primarily from the viewpoint of their biological aspects. Emphasis will be placed on critical evaluation of research strategies and hypotheses.
Taught by: Lexow
One-term course offered either term
Prerequisite: BIBB 109 or Permission of Instructor
Activity: Seminar
1 Course Unit

BIBB 481 Behavioral Pharmacology
This seminar course reviews the behavioral effects of drugs in animals, the general biological and psychological principles of drug action, and the relationship between drugs that affect brain monoamine and opiate systems and their behavioral effects. Introductory lectures on general topics will be followed by advanced discussion of specific topics in a journal club format through student presentations.
Taught by: Heeringa
Course not offered every year
Prerequisite: BIBB 109
Activity: Seminar
1 Course Unit

BIBB 482 Clinical Psychopharmacology
This course examines the history, rationale and putative mechanism of action of drugs used in the treatment of psychiatric disorders. Emphasis is placed on neurobiological processes underlying psychopathology and pharmacological intervention. Drugs currently in use as well as new drugs in development will be covered. Strategies, techniques, issues and challenges of clinical psychopharmacological research will be addressed and new approaches to drug discovery, including the use of pharmacogenomics and proteomics to understand variability in drug response and identify new molecular drug targets, will be covered in depth. Specific drug classes to be considered include antidepressants, anxiolytics, typical and atypical antipsychotics, narcotic analgesics, sedative hypnotics, and antiepileptic medications. A contrasting theme throughout the course will be the use of drugs as probes to identify neural substrates of behavior.
Taught by: Lexow
Course not offered every year
Prerequisite: BIBB 109 or Permission of Instructor
Activity: Seminar
1 Course Unit
BIBB 485 Signaling in Nerve and Muscle
This seminar based course will expand and deepen knowledge gained in BIBB 251 about excitability in the nervous system and about how synapses function. A new area of study will be skeletal and cardiac muscle which are both excitable tissues. A particular focus of the course will be the roles which calcium ions play as second messengers in nerve, muscle and synapse. We will learn about how calcium is handled in nerve and muscle and about the techniques used to study intracellular calcium. The later part of the course will have a journal club format, based on the reading and presentation of original papers. These will include papers on calcium related muscle diseases and on the integration of nerve and muscle signaling in animal motor behaviors.
Taught by: Hollingworth
One term course offered either term
Prerequisite: BIBB251 or Permission
Activity: Lecture
1 Course Unit

BIBB 492 Experimental Methods in Synaptic Physiology
In this lab course, a small number of students meet once per week to discuss topics in synaptic physiology and to become proficient at sharp electrode techniques for intracellular recording, using isolated ganglia from the snail Helisoma. The first part of each class will consist of discussion of weekly reading from the primary literature, with the remainder of the class devoted to hands-on experiments. After learning to record from and characterize single neurons, students will study synaptic transmission by stimulating incoming nerve trunks or by recording from pairs of interconnected neurons. As a midterm assignment, students will prepare and present a short research proposal using this model system, to be evaluated by the class. For the last half of the course, the class will work together on one or two of these proposals, meeting at the end of each class to pool our data, analyze the results and discuss their significance.
Taught by: Kaplan
One term course offered either term
Prerequisite: BIBB 251
Activity: Laboratory
1 Course Unit
Notes: Lab fee $100

BIBB 499 Senior Honors Thesis
Continuation of BIBB 399 research. Students will be required to give an oral presentation of their research at the annual BBB symposium Honors Seminar.
Taught by: Standing Faculty
One term course offered either term
Prerequisites: BIBB 399, Permission of BIBB Director and a GPA of 3.5 or better
Activity: Independent Study
1 Course Unit

BIBB 585 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Taught by: Balasubramanian
Course not offered every year
Also Offered As: BE 530, NGG 594, PHYS 585, PSYC 539
Activity: Lecture
1 Course Unit

Biology (BIOL)

BIOL 006 Evaluating Medical Treatment: How Do We (and the FDA) Know What Works?
The development of new medical treatments typically culminates in one or more clinical trials - experiments in which the effects of the new treatment are compared with the effects of another treatment or no treatment. A great many considerations go into the design of these medical experiments. In this seminar, we will discuss the basic structure of the clinical trial, the varying types of designs that may be used, the scientific and ethical issues that arise, and the regulatory process that ultimately determines whether medical products are effective and safe and whether they can be made available to the public.
Taught by: Ellenberg
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: May not be counted toward the Biology major or minor.

BIOL 011 Humans in a Microbial World
Microbes are a fundamental part of life on this planet. This course will explore the causes and consequences of the distribution and abundance of microbes (microbial ecology) as well as microbial evolution on human health and disease risk. We will address the interplay between human society and microbial ecology and evolution in shaping disease risk and directing scientific study. This course will apply concepts from basic biology, ecology, and evolution to study infectious microbes as living creatures.
For BA Students: Living World Sector
Taught by: Brisson
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: May not be counted toward the Biology major or minor
BIOL 014 Descent with Modification: An introduction to the science of evolution
Evolution provides the unifying framework for the biological sciences and has been confirmed by a huge and diverse body of evidence. Public opinion polls show, however, that evolution continues to be socially and politically controversial in the United States. In this freshman seminar, we will explore the scientific basis for evolution by reading and discussing historical sources, a current nontechnical text on evolution, and selected papers and articles from the scientific and popular literature. With our knowledge of evolutionary fact and theory as background, we will also discuss social and political opposition to the teaching of evolution. Grading will be based on participation in class discussions and on performance in several brief writing assignments. There is no course prerequisite, but high school introductory biology would be helpful. For BA Students: Living World Sector Taught by: Sniegowski Course offered fall; even-numbered years Activity: Seminar 1 Course Unit Notes: May not be counted toward the Biology major or minor. General biology background preferred but not required

BIOL 017 The Biology of Food
This course will examine the ways in which humans manipulate - and have been manipulated by - the organisms we depend on for food, with particular emphasis on the biological factors that influence this interaction. The first part of the course will cover the biology, genetics, evolution, and breeding of cultivated plants and animals; the second part will concern the ecological, economic, and political factors that influence food production. Lab activities include demonstrations and field trips to local farms. For BA Students: Living World Sector Taught by: Poethig Course offered spring; odd-numbered years Activity: Lecture 1 Course Unit Notes: May not be counted toward the Biology major or minor.

BIOL 019 Biological Science and Public Policy
This course will examine the scientific basis of public policy decision making in areas of human health, the environment, energy, and agriculture. A general understanding of the science involved in these areas - predominantly genetics, cell biology, physiology, and ecology - will be applied to topics such as drug and pesticide resistance, endangered species, regulation of biotechnology, microbial sources of energy, control of toxic substances, and the war against cancer. No formal background in biology or policy is required. The course should be particularly useful for non-science students who would like to gain insight into areas of biology of importance to public decision making and to students of public policy who would like a better background on biological issues. Course usually offered in fall term Prerequisite: High school biology recommended Activity: Lecture 1 Course Unit Notes: May not be counted toward the Biology major or minor. Only offered through the College of Liberal and Professional Studies

BIOL 101 Introduction to Biology A
General principles of biology focusing on the basic chemistry of life, cell biology, molecular biology, and genetics in all types of living organisms. Particular emphasis will be given to links between the fundamental processes covered and current challenges of humankind in the areas of energy, food, and health. For BA Students: Living World Sector One-term course offered either term Activity: Lecture 1.5 Course Unit Notes: (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 101 is the companion course to BIOL 102 and should be taken before BIOL 102.

BIOL 102 Introduction to Biology B
General principles of biology focusing on evolution, physiology, development, and ecology in all types of living organisms. For BA Students: Living World Sector One-term course offered either term Prerequisite: BIOL 101 Activity: Lecture 1.5 Course Unit Notes: (3 hrs. lec., 3 hrs. lab, 1.5 c.u.) BIOL 102 is the companion course to BIOL 101 and should be taken after BIOL 101.

BIOL 109 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological basis of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders. For BA Students: Living World Sector Taught by: Kane and McLean One-term course offered either term Also Offered As: BIBB 109, PSYC 109 Activity: Lecture 1 Course Unit

BIOL 121 Introduction to Biology - The Molecular Biology of Life
An intensive introductory lecture course covering the cell, molecular biology, biochemistry, and the genetics of animals, bacteria, and viruses. This course is comparable to Biology 101, but places greater emphasis on molecular mechanisms and experimental approaches. Particular attention is given to the ways in which modern cell biological and molecular genetic methods contribute to our understanding of evolutionary processes, the mechanistic basis of human disease, and recent biotechnological innovations. Students are encouraged to take BIOL 121 and 123 concurrently. For BA Students: Living World Sector Course usually offered in fall term Prerequisites: Solid high school biology and strong high school chemistry or CHEM 101 Corequisite: BIOL 123 is recommended Activity: Lecture 1 Course Unit Notes: Biology majors and pre-medical students should take either BIOL 101 or 121. BIOL 121 is the companion course to BIOL 124 and may be taken before or after BIOL 124.
BIOL 123 Introductory Molecular Biology Laboratory
An intensive introductory laboratory course emphasizing how molecular biology has revolutionized our understanding of cell and organism functions. BIOL 121 and 123 should be taken concurrently.
Taught by: Hogan
Course usually offered in fall term
Corequisite: BIOL 121 or credit by exam for BIOL 101 or 121
Activity: Lecture
0.5 Course Units
Notes: (1 hr. lec., 3 hrs. lab, 0.5 c.u.) Students may not take both BIOL 101 and 123 for credit.

BIOL 124 Introductory Organismal Biology Lab
An intensive introductory laboratory course in organismal biology.
Taught by: Robinson/Hogan
Course usually offered in spring term
Prerequisite: Solid high school biology or credit by exam for BIOL 102
Activity: Lecture
0.5 Course Units
Notes: (1 hr. lec., 3 hrs. lab, 0.5 c.u.) BIOL 124 is the companion course to BIOL 121 and may be taken before or after BIOL 121. Students may not take both BIOL 102 and 124 for credit.

BIOL 138 Energy Transformations and Living Off-the-Grid
The course will examine major sources of energy on earth: sunlight, mechanical, chemical and biological, and how this energy is transformed into useful energy for humans - typically electrical energy or food. Considerable emphasis will be on forms of regenerative energy that can be used when living off the grid. As a case study, we will examine some approaches taken by the US military to provide energy capability for dismounted Marines operating on foot in austere environments. Faculty lectures will be supplemented by guest lectures from leaders in government and industry. No scientific knowledge is assumed beyond high school biology, chemistry and physics. Energy is necessarily a quantitative subject so students should be comfortable with quantitative approaches. A major goal of this course is for students to develop an awareness for the amounts of energy they use in their daily lives, and how they might reduce them. As an exercise, students will measure how much energy their smart phones and laptops use in a day and try to generate a comparable amount of energy through physical effort.
Taught by: Rome
Course offered fall; odd-numbered years
Prerequisites: High school biology and math
Activity: Seminar
1 Course Unit

BIOL 140 Humans and the Environment
Intensive exposure to current issues and solutions in contemporary human interactions with the environment. Global in scope, but focused on case histories. Emphasis on providing biological and sociological background for a given major environment-human interaction, and state-of-the-art suggested solutions.
For BA Students: Natural Science and Math Sector
Taught by: Janzen
Course usually offered in fall term
Also Offered As: BIOL 440
Prerequisites: Sophomore standing or greater. Some biology background suggested
Activity: Lecture
1 Course Unit

BIOL 199 Clinical & Translational Research
Independent study for students doing research based on data that is generated in a clinical setting. Projects must be sponsored by standing faculty of the University of Pennsylvania and co-sponsored by a faculty member in the Department of Biology. The project must be of biological interest and must use appropriate quantitative or statistical methods. A final paper is required. Apply at the Academic Office, 102 Leidy Labs.
One-term course offered either term
Activity: Independent Study
1 Course Unit

BIOL 201 Essentials of Cell Biology
An intermediate level exploration of cell structure and function including membrane structure, intracellular organelles, membrane trafficking, surface receptors and signal transduction, the cytoskeleton, cell motility and communication, and the cell cycle. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisites: BIOL 101 and 120 or BIOL 121 or equivalent courses
Activity: Lecture
1 Course Unit

BIOL 203 Essentials of Biochemistry
Intermediate level course covering principles of modern biochemistry. Topics include protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanisms, membrane structure and function, metabolism, and cellular energy transduction. Emphasis will be on biochemical problem solving, experimental design, and application of quantitative methods in a biological and clinical context. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisites: BIOL 101 and 120 or BIOL 121, and CHEM 241, the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently
Activity: Lecture
1 Course Unit

BIOL 204 Biochemistry
BIOL 204 examines the basic principles of protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanism, membrane structure and function, metabolism, and cellular energy transduction. The primary objective is to provide life scientists with an appreciation of basic principles of modern biochemistry, and of how the current conceptual and technical framework arose. Emphasis is placed on the experimental approaches and reasoning behind the dissection and reconstitution of these processes in a biological and, in some cases, clinical context. Discussions directed at biochemical problem solving, experimental design and the application of quantitative methods are integral to the course.
Taught by: Rea
Course usually offered in spring term
Prerequisites: BIOL 101 and 102 or BIOL 121, and CHEM 241, the latter of which may be taken concurrently. CHEM 242 is recommended and may also be taken concurrently
Activity: Lecture
1 Course Unit
BIOL 205 Cell Biology
A conceptual view of cell structure and function including membrane
structure, intracellular organelles, membrane trafficking, surface
receptors and signal transduction, the cytoskeleton, cell motility and
communication, and the cell cycle. Cell biology is a dynamic field and
recent research discoveries will be included in the lectures.
Taught by: Gru and Svityna
Course usually offered in fall term
Prerequisites: BIOL 101 and 102, or BIOL 121
Activity: Lecture
1 Course Unit

BIOL 211 Essentials of Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Mendelian
and molecular genetics will be discussed as well as the use of genetic
analysis to address questions in all areas of biology. The processes of
DNA replication, transcription, and translation will be discussed at the
molecular level. Other topics include the regulation of gene expression
and genomics. This course is open to students in the College of Liberal
and Professional Studies only.
One term course offered either term
Prerequisites: BIOL 101 and 102 or BIOL 121 or equivalent courses
Activity: Lecture
1 Course Unit

BIOL 213 Essentials of Vertebrate Physiology
A comparative and quantitative approach to the physiological function
of vertebrates. Topics include muscles, nervous system, cardiovascular
system, respiration, and renal function. This course is open to students in
the College of Liberal and Professional Studies only.
One term course offered either term
Prerequisites: BIOL 101 and 102 or BIOL 121 and 124 or equivalent
courses
Activity: Lecture
1 Course Unit

BIOL 215 Vertebrate Physiology
The course will focus on integrative aspects of physiological function of
vertebrates. Comparative, environmental, and quantitative approaches
will be used. Major topics include muscle, the cardiovascular system,
respiration, renal function and the nervous system.
Taught by: Woodward
One term course offered either term
Prerequisites: BIOL 102 or 121 or 124
Activity: Lecture
1 Course Unit

BIOL 221 Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Two
broad areas will be considered 1) Molecular Biology: DNA replication,
transcription, translation, regulation of gene expression in both
prokaryotic and eukaryotic systems, and genomics and 2) Genetics: basic
Mendelian & molecular genetics.
Taught by: Bonini/Gallagher/Gould/Levine
One term course offered either term
Also Offered As: BIOL 527
Prerequisite: BIOL 101 or 121
Activity: Lecture
1 Course Unit

BIOL 230 Evolutionary Biology
Theories and mechanisms of evolution, with emphasis on the genetic
basis of evolutionary change.
Taught by: Schmidt, P
Course usually offered in spring term
Prerequisites: BIOL 101 and 102, or BIOL 121
Activity: Lecture
1 Course Unit

BIOL 231 The Evolution of Animal Behavior
The evolution of social behavior in animals, with special emphasis on
group formation, cooperation among kin, mating systems, territoriality
and communication.
Course not offered every year
Also Offered As: BIBB 231, PSYC 231
Prerequisite: BIOL 102 or 121 or PSYC 001
Activity: Lecture
1 Course Unit

BIOL 240 Ecology: From individuals to ecosystems
The study of living organisms in their natural environment, spanning the
ecological physiology of individuals, the structure of populations, and
interactions among species, including the organization of communities
and ecosystem function.
Taught by: Helliker/Akay
Course usually offered in fall term
Prerequisite: BIOL 102 or 121
Activity: Lecture
1 Course Unit

BIOL 251 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells, molecular
neurobiology and development. Topics include: action potential
generation, synaptic transmission, molecular and physiological studies
of ion channels, second messengers, simple neural circuits, synaptic
plasticity, learning and memory, and neural development.
Taught by: Schmidt, M./Kaplan
Course usually offered in fall term
Also Offered As: BIBB 251
Prerequisites: BIOL 101 and 102, or BIOL 121 and BIBB 109; PHYS 101 or
151 strongly recommended
Activity: Lecture
1.5 Course Unit
Notes: (3hrs. lec., 3hrs. lab, 1.5 c.u.)

BIOL 275 Elements of Microbiology
Microbiology plays a central role in diverse areas of human life such
as infectious disease, ecology, and biotechnology. This course will
cover aspects of modern microbiology with an emphasis on prokaryotic
organisms. The topics will include basic aspects of microbial diversity,
genetics, and pathogenesis as well as examples of applied microbiology.
This course is open to students in the College of Liberal and Professional
Studies only.
One term course offered either term
Prerequisites: BIOL 101 or 121, BIOL 211 or 221 or equivalent strongly
recommended
Activity: Lecture
1 Course Unit
Notes: Combined lecture and lab course.
BIOL 304 Infectious Disease Biology
This course focuses on selected topics concerning infectious agents, the diseases they cause in humans, and the social and scientific challenges they pose. The first section addresses the principles of epidemiology and microbial pathogenesis, as well as pathophysiology of infectious diseases. In the second section, tools and techniques of diagnosis, tracking, and control of infectious diseases will be discussed. To develop a broad understanding of the many different aspects of infectious processes, selected viral, fungal, protozoan, and helminthic pathogens and related infectious diseases will be presented. This course is open to students in the College of Liberal and Professional Studies only.
Course usually offered in spring term
Prerequisites: BIOL 211 or 221, 275 and 404, the later of which may be taken concurrently
Activity: Lecture
1 Course Unit

BIOL 306 Histology
This course is designed to introduce the undergraduate student to the structure of tissues at the cellular level and to the way in which those tissues are assembled into organs. This knowledge of structure will be the basis for discussion of tissue and organ function. This course is open to students in the College of Liberal and Professional Studies only.
One-term course offered either term
Prerequisites: BIOL 101 and 102 or BIOL 121, and BIOL 201 or 205 recommended
Activity: Lecture
1 Course Unit

BIOL 330 Comparative Vertebrate Anatomy and Evolution
This course will survey the phylogeny and anatomy of vertebrate organisms from a comparative evolutionary perspective. The lecture will concentrate on the history, diversity, structure and function of vertebrates. A companion lab course, BIOL 336, is available for those students interested in a more complete understanding of vertebrate anatomy.
Taught by: Dunham
Course usually offered in spring term
Prerequisite: BIOL 102 or 121
Activity: Lecture
1 Course Unit

BIOL 336 Comparative Vertebrate Anatomy Lab
Laboratory portion of BIOL 330 Comparative Vertebrate Anatomy and Evolution. Students will learn comparative anatomy through dissection of representative vertebrates. Students taking the lab must have credit or register for the lecture course, BIOL 330.
Taught by: Dunham
Course usually offered in spring term
Prerequisite: BIOL 330 previously or concurrently is required
Activity: Laboratory
0.5 Course Units
Notes: (3 hrs lab., 0.5 c.u.)

BIOL 354 Developmental Biology
A view of how an animal embryo is specified to develop and differentiate into a wide spectrum of cell types, and how the spatial patterns and axes of embryos are determined. The course will focus on genetic and molecular approaches, but will also cover the comparative anatomy of developing embryos to the extent necessary to understand the conserved aspects of embryonic patterning. Special emphasis will be placed on organisms with particular advantages for the study of embryonic development: e.g., mouse, frog, zebrafish, and Drosophila. The first half of the course will cover cell fate restrictions, cloning animals using nuclear transfer, stem cell biology, formation of the embryonic axes in vertebrates and Drosophila, and patterning of the neural tube and mesodermal tissues. The second half of the course will focus on emerging ideas and findings in the field, with emphasis on analysis of original literature.
Taught by: Wagner J
Course usually offered in spring term
Prerequisite: BIOL 205 or 221
Activity: Lecture
1 Course Unit

BIOL 375 Microbial Diversity and Pathogenesis
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, virology, and pathogenesis as well as examples of applied microbiology.
Taught by: Pohlschroder
Course usually offered in spring term
Also Offered As: BIOL 575
Prerequisites: BIOL 101 and 102 or BIOL 121, BIOL 221
Activity: Lecture
1 Course Unit

BIOL 375 Microbial Diversity and Pathogenesis Lab
The importance of microbiology in complex issues, such as the impact of the microbiome in human health or as alternative energy sources, is being appreciated more and more each day. This upper level laboratory course provides students with a robust technical skill set while also giving them an opportunity to participate in an authentic research project that may lead to novel discoveries. Students will generate research questions, formulate hypotheses, design experiments, analyze data, and present their research findings to the class. In each project, students will use the cutting edge approach of metagenomics to evaluate the microbial diversity of their environment via Next Generation Sequencing. Students will also examine the function of microbial species within their communities. Potential projects include the isolation of novel antibiotic producers and the antibiotic they produce, designing and optimizing microbial fuel cells that can be used to generate electricity, or isolating antibiotic resistant bacteria and attempting novel approaches to inhibit or prevent their growth.
Taught by: Pohlschroder and Hogan
Course usually offered in spring term
Also Offered As: BIOL 576
Prerequisite: BIOL 375 previously or concurrently is recommended but not required
Activity: Laboratory
0.5 Course Units
Notes: (3 hrs lab., 0.5 c.u. or 6 hrs lab., 1.0 c.u. in some years)
BIOL 399 Independent Study
Laboratory research with a faculty member in the Department of Biology. Research may also be conducted elsewhere on campus but co-sponsored by a faculty member in Biology. A final paper is required. Apply at the Biology Academic Office, 102 Leidy Labs.
One term course offered either term
Activity: Independent Study
1 Course Unit

BIOL 400 Field Botany
This course focuses on teaching students the Pennsylvania flora, both native and naturalized. Through weekly field trips, students will gain an appreciation for the diversity of plant species and plant communities in PA, and observe and discuss ecological and historical forces that influence plant species occurrences and plant communities. The ability to quickly and accurately identify plants in the field, through both sight identification and the use of a dichotomous key, is the major thrust of this course. Students will also learn how to appropriately collect plant materials for further study/identification in the laboratory and for archiving in an herbarium collection.
Taught by: Block and Skema
Course usually offered in fall term
Prerequisite: BIOL 101 or 124 or permission of instructor
Activity: Laboratory
1 Course Unit

BIOL 401 Prokaryotic Microbiology: A Pragmatic View
This interactive course is intended for a small group of students aspiring to pursue research in microbiology, preferably using prokaryotes. Students will study selected papers and will attend the Prokaryotic Microbiology Seminars on Fridays. Specific problems of importance to a given field at a particular time will be critically analyzed and discussed: How were cutting edge techniques of the time used to address these problems? How would the same problems be approached using current techniques? The emphasis of the course will be on learning to become a thoughtful experimentalist rather than acquiring the hottest emerging knowledge.
Taught by: Daldal
Course usually offered in spring term
Prerequisite: BIOL 375 is recommended but not required
Activity: Seminar
1 Course Unit

BIOL 404 Immunobiology
Early development of microbiology, pathology, and immunobiology; molecular and cellular bases of immune phenomena including: immunity to pathogens, immune diseases, autoimmunity, and hypersensitivity. This course is open to students in the College of Liberal and Professional Studies only.
One term course offered either term
Prerequisites: BIOL 201 or 205 and BIOL 211 or 221
Activity: Lecture
1 Course Unit

BIOL 405 First Line of Defense: The Role of Innate Immunity in Disease
All organisms, from bacteria to humans, rely on innate, non-specific defense systems to protect against infection and mediate damage. Even in organisms that can generate highly specific and efficient adaptive responses, such as humans, defects in innate immune system components can be fatal. In this course, we will examine the cellular and molecular mechanisms of the components of the innate immune system through discussion of primary literature. We will explore how the innate immune system influences the course of infections and cancer, as well as autoinflammatory disorders that lead to host tissue damage. Though our focus will be on mammalian immunity, we will also explore the evolutionary development of innate immunity through comparison of systems in different organisms.
Taught by: Elliott
Course usually offered in fall term
Prerequisites: BIOL 205 or permission of instructor, BIOL 221 recommended
Activity: Seminar
1 Course Unit

BIOL 406 Molecular Mechanisms of Infectious Disease Biology
This course is designed for advanced undergraduates and beginning graduate students with a particular interest in infectious disease biology. Note that this course is not a comprehensive survey of the field and is not appropriate for students seeking a lecture course on disease. The primary objective of this course is to teach students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of pathogen interactions with host cells and organisms, and implications for basic research and therapeutic development.
Taught by: Roos
Course usually offered in spring term
Prerequisite: BIOL 205; BIOL 221 recommended
Activity: Seminar
1 Course Unit

BIOL 407 Cancer Cell Biology
This course will focus on the molecular mechanisms by which fundamental cellular processes are disrupted in the development of cancer.
Taught by: Keith
Course usually offered in fall term
Prerequisites: BIOL 205 and 221 or equivalent courses
Activity: Seminar
1 Course Unit

BIOL 410 Advanced Evolution
Mechanisms of evolution at the genetic and populational levels. Empirical and theoretical approaches to natural selection, population structure, gene flow, and quantitative genetics will be emphasized.
Taught by: Sniegowski/Plotkin
Course offered fall; odd-numbered years
Prerequisite: BIOL 230 or permission of instructor
Activity: Lecture
1 Course Unit
BIOL 411 Evolutionary Ecology
This course will focus on topics at the intersection of evolutionary biology and ecology, including the evolution of cooperation and conflict from genes to societies to ecological communities, life history evolution, and the evolution of interspecific interactions and ecological communities. The course will use a combination of lectures and discussion of readings from the primary literature.
Taught by: Linksvayer
Course usually offered in spring term
Prerequisite: BIOL 230 or 231 or 240
Activity: Seminar
1 Course Unit

BIOL 412 Animal Physiological and Population Ecology
This course explores the interactions of environmental variables, such as temperature, with the physiology of vertebrate animals and the mechanistic links of those interactions with population dynamics.
Taught by: Dunham
Course offered spring; even-numbered years
Prerequisite: BIOL 240 or permission of instructor
Activity: Seminar
1 Course Unit

BIOL 415 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.
Taught by: Arscott
Course usually offered in spring term
Also Offered As: ENVS 416
Prerequisites: BIOL 101 or 121 and one semester of college chemistry
Activity: Lecture
1 Course Unit

BIOL 417 Theoretical Population Biology
Introduction to basic theoretical tools to study the evolutionary and ecological dynamics of populations. Topics to be discussed include: basic population dynamics and population genetics theory, evolutionary game theory/adaptive dynamics, social evolution (kin selection/multilevel selection), life-history evolution, and stochastic models. Other topics may be added based on the specific interests of students in the class.
Taught by: Ackay
Course usually offered in spring term
Prerequisites: BIOL 230 and MATH 104 recommended
Activity: Seminar
1 Course Unit

BIOL 421 Molecular Genetics
A detailed analysis of gene structure and expression in both prokaryotic and eukaryotic organisms. Rapid advances in DNA technology and genomics will be emphasized. The application of these advances to the molecular genetic analysis of development, cell function and disease will be discussed.
Taught by: Weinberg
Course usually offered in fall term
Prerequisite: BIOL 221 or equivalent course
Activity: Lecture
1 Course Unit

BIOL 422 Genomics of Human Disease and Evolution
In this course we will discuss the identification and characterization of genetic diversity in the human genome, the genetic basis of normal variable traits, and the genetic basis of human disease. The study of the human genome increasingly impacts almost every aspect of our society from medicine to law enforcement to how we view ourselves. The focus of this course will be to apply concepts and methods of genetics and genomic analysis (gene mapping, genome sequencing, epigenetics, gene expression) to better understand the genetic basis of both normal variable traits as well as disease. We will discuss how to distinguish the evolutionary and demographic forces (i.e. mutation, migration, selection, population size) that influence genotypic and phenotypic variation within and among human populations. We will also discuss the implications of these studies for personalized medicine.
Taught by: Tishkoff
Course offered spring; odd-numbered years
Also Offered As: CAMB 422
Prerequisite: BIOL 221
Activity: Lecture
1 Course Unit

BIOL 425 Biochemistry and Molecular Genetics Superlab
Intensive laboratory class where open-ended, interesting biological problems are explored using modern lab techniques. Topics may include protein structure/function studies; genetic screens, genomics and gene expression studies; proteomics and protein purification techniques; and molecular cloning and DNA manipulation. The course emphasizes developing scientific communication and independent research skills. Course topics reflect the interests of individual Biology faculty members.
This course is recommended for students considering independent research.
Taught by: Wagner J
One-term course offered either term
Prerequisite: BIOL 204 or 205 or 221 or an equivalent course is recommended
Activity: Laboratory
1 Course Unit

BIOL 430 Evolution and Ecology of Infectious Diseases
This course will focus on fundamental topics related to the ecological and evolutionary processes driving the transmission of pathogenic microbes among hosts including life-history strategies; evolution of pathogenic traits; the impacts of temporal, spatial and host-trait heterogeneity; and factors causing the emergence of an infectious pathogen. Examples will be drawn from human, wildlife, and plant pathogens to illustrate these ecological and evolutionary topics. Students will learn to develop and apply current ecological and evolutionary theory to infectious microbe research and gain practical experience accessing, interpreting and synthesizing the peer-reviewed scientific literature through a combination of popular and scientific readings, discussion, and lecture.
Taught by: Brison
Course offered fall; even-numbered years
Prerequisite: BIOL 230
Activity: Seminar
1 Course Unit
BIOL 431 Genome Science and Genomic Medicine
This course will be a focused study of genomes, genomic techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections.
Taught by: Gregory
Course usually offered in spring term
Also Offered As: CAMB 431
Prerequisite: BIOL 221; BIOL 421 strongly recommended
Activity: Lecture
1 Course Unit

BIOL 433 The Genetics of Adaptation: How sex, conflict, and pathogens shape modern genomes
In this course we explore the genetic basis of adaptation. We will investigate the forces that drive adaptation (e.g., environmental stress, pathogens, conflict, sex), the genetic mechanisms of adaptation (protein sequence changes, expression divergence, gene duplication, etc.), and the consequences of adaptation for contemporary cellular functions, developmental processes, and ecological interactions. The class meetings will be structured around both lectures and student-led discussions of the primary literature.
Taught by: Levine
Course usually offered in spring term
Prerequisite: BIOL 221 or 230 or permission of instructor
Activity: Seminar
1 Course Unit

BIOL 436 Molecular Physiology
This course is designed for advanced undergraduate and graduate students who are interested in molecular physiology of sensory signal transduction. The major topics to cover will be signal transduction mechanisms used by membrane ion channels and receptors that detect the sensory stimuli (light, sound, temperature and taste, for example) and transmit the signals to the nervous system. Modern molecular/structural techniques (patch clamp, protein crystallization, molecular genetics, expression cloning and protein purification) will be introduced along with each topic. References will be primary research articles. Students will critically evaluate research discoveries by reading and presenting one to two original research papers. Each student is required to write a 10-page research proposal and to critique proposals written by fellow students.
Taught by: Ren
Course usually offered in fall term
Prerequisite: A year of introductory biology or equivalent
Activity: Seminar
1 Course Unit

BIOL 437 Introduction to Computational Biology & Biological Modeling
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems.
Taught by: Kim
Course usually offered in fall term
Also Offered As: CIS 436, CIS 536, GCB 536
Prerequisites: Intermediate level biology; MATH 104; BIOL 446 or equivalent. Probability theory and linear algebra are highly recommended
Activity: Lecture
1 Course Unit

BIOL 438 Systems Biology: Integrative physiology and biomechanics of the muscular system
The course will focus on muscle function from the level of molecules to whole animal locomotion. At each level of organization, muscle function will be explored from mechanical and energetic viewpoints. The course will include lectures, demonstrations, and several guest expert lectures. Students will also be introduced to realistic musculo-skeletal modelling and forward dynamic simulations to explore integrated function.
Taught by: Rome
Course usually offered in spring term
Prerequisites: 1 year physics, 1 year chemistry, and BIOL 215 or 251
Activity: Lecture
1 Course Unit

BIOL 440 Advanced Analysis of Humans and the Environment
Advanced version of BIOL 140: Humans and the Environment. Additional readings and course work as directed.
For BA Students: Natural Science and Math Sector
Taught by: Janzen
Course usually offered in fall term
Also Offered As: BIOL 140
Prerequisite: Permission of instructor
Activity: Lecture
1 Course Unit

BIOL 442 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Course usually offered in fall term
Also Offered As: BIIB 442, NGG 575, PSYC 421
Prerequisite: BIOL 251/BIIB 251 or PSYC 001 or permission of instructor
Activity: Seminar
1 Course Unit
**BIOL 444 Molecular Evolution of Physiological Functions**
This course is designed for students who are interested in understanding how physiological functions are achieved. Taking advantage of the recent explosion in genetic data and high-resolution protein structure analysis across organisms, the course focuses on the evolution of physiological functions at the genetic, structural, circuit and organismal levels. Examples include the co-evolution of toxins and toxin resistance between hunter and prey, the evolution of substance transport across cell membranes, intracellular signaling cascades, intercellular communication, distributed and centralized nervous systems, neural circuits controlling physiological functions such as feeding, locomotion and visual information processing. Students are expected to learn 1) basic physiological processes, their origin and adaptation, 2) modern genetic, structural and physiological techniques, 3) to critically evaluate research findings, 4) to present scientific papers, and 5) to write a research report.

Taught by: Ren
Course usually offered in fall term
Prerequisites: Introductory biology is required; BIOL 109, 215, 221, or 251 are recommended but not required
Activity: Seminar
1 Course Unit

**BIOL 446 Statistics for Biologists**
Introductory probability theory. Principles of statistical methods. Problems of estimation and hypothesis testing in biology and related areas.

Taught by: Plotkin
Course usually offered in fall term
Prerequisite: MATH 104 or equivalent; or permission of instructor
Activity: Lecture
1 Course Unit

**BIOL 448 Principles of Drug Action**
Principles of Drug Action covers the concepts of pharmacological sciences as they relate to biochemistry, cell biology, and drug therapy. The intent of the course is to provide a solid grounding in targets of drug action, dose-response relationships, pharmacodynamics, and pharmacokinetics. The grounding is achieved by a discussion of these concepts explicitly and, through selected examples, implicitly. The first part of the course covers each of the concepts. Emphasis is placed on the integration with principles of cell biology and biochemistry. The second part of the course covers selected therapeutic applications. The applications chosen fall within four areas: cardiovascular, brain and behavior, antipyretic and anti-inflammatory, and antimicrobial. They are used to recapitulate important concepts and provide insight into the interplay between pharmacology and human physiology. The applications and the areas they represent are by no means comprehensive, but students will be able to pursue additional interests through papers.

Taught by: Manning
Course usually offered in fall term
Prerequisite: BIOL 205; BIOL 204 is recommended
Activity: Lecture
1 Course Unit

**BIOL 451 Neural Systems and Behavior**
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g., visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.

Taught by: Schmidt, M.
Course usually offered in spring term
Also Offered As: BIBB 479, PSYC 479
Prerequisites: BIOL 251/BIBB 251 and permission of instructor
Activity: Lecture
1 Course Unit

**BIOL 456 Neural Circuits for Survival**
A fundamental goal of neuroscience is to understand how neural circuits in the brain function to influence behavior. The aim of this course is to highlight the neural basis of behavior and discuss modern approaches and novel methods to study the neuronal control of classically studied aspects of behavior. Through a combination of discussions, student presentations, and interactive lectures, we will explore the neural systems that regulate the interactions an animal has with the external world. We will explore sensory systems (such as vision, taste, and olfaction), motor systems, and survival behaviors (such as feeding, drinking, mating, and aggression). The course evaluation will be based largely on written work, participation, and presentations.

Taught by: Betley
Course usually offered in spring term
Prerequisite: BIOL 251/BIBB 251 or permission of instructor
Activity: Seminar
1 Course Unit

**BIOL 466 Molecular Genetics of Neurological Disease**
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer's, Fragile-X and autism, dementia, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers.

Taught by: Bonini
Course usually offered in fall term
Also Offered As: BIBB 466
Prerequisites: BIOL 221 is required; BIOL 251 and BIOL 421 are recommended
Activity: Lecture
1 Course Unit
BIOL 469 Plant Physiology Through Space and Time
This course is a lab/lecture/seminar hybrid that will meet once per week for three hours. Each session will consist of mini-lecture/lab, paper discussions/lab, or solely lab efforts. All reading assignments will be available on Canvas (no textbook fees). We will examine various aspects of photosynthesis, water relations and nutrient acquisition in the context of the evolutionary progression of higher plants. With each subject, we will consider, measure, and in some cases model whole-plant physiology while examining sub-cellular-level controls and ecosystem-to-global-level consequences. This course is designed to give molecular biologists through earth-system scientists the tools to measure and understand whole-plant physiological responses to molecular manipulation and environmental variability. All students will learn to appreciate the context of their work on both micro and macro scales.
Taught by: Helliker
Course usually offered in spring term
Prerequisite: BIOL 240 or permission of instructor
Activity: Seminar 1 Course Unit

BIOL 475 Topics in Prokaryotic Biology: From Molecules to Microbiomes
This course will cover research articles from both the classic and contemporary literature on the genetics, cell biology, and physiology of prokaryotes. The material will focus on a small number of subjects in depth, with an emphasis on how the field has arrived at its current state of knowledge and on exciting new research directions. Possible topics include: stress responses, cell signaling, subcellular organization, bacteriophages, microbial communities, and host-microbe interactions.
Taught by: Goulan
Course offered spring; even-numbered years
Prerequisite: BIOL 221 or BIOL 375 or permission of instructor
Activity: Seminar 1 Course Unit

BIOL 477 The Science and Art of Biotechnology
Biotechnology transforms basic biological research into pharmaceutical therapies. This course will examine some explanations for American biotechnology vitality by studying case histories in which fundamental biological observations were subsequently developed, successfully and unsuccessfully, for therapeutic applications. Along the way, we will also seek to understand the interactions among academic research institutions, biotechnology companies, large pharmaceutical companies, the Food and Drug Administration, financial institutions, venture groups, and the Patent and Trademark Office. Classes will be highly interactive. Students will present case histories in a critical fashion. Ultimately, students will conduct mock negotiations focused on university technology transfers, clinical trial design, financing, and intellectual property.
Taught by: Roth
Course usually offered in fall term
Prerequisite: Either BIOL 204 or 205 or 221 or permission of the department
Activity: Seminar 1 Course Unit

BIOL 480 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. Biology 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies.
Taught by: Guo
Course usually offered in fall term
Also Offered As: CAMB 480
Prerequisite: BIOL 201 or 205
Activity: Lecture 1 Course Unit

BIOL 482 Cell Signaling
The evolution of multicellularity required that cells be able to both send and receive signals from their neighbors. The development of organs and differentiation of cells and tissues requires reliable and continuous communication between cells. Consequences of inappropriate or anomalous signaling include development abnormalities and cancer. This class will examine mechanisms of cell-to-cell signaling between cells in plants and animals with an emphasis on the cell biology of development.
Taught by: Gallagher
Course usually offered in fall term
Also Offered As: CAMB 482
Prerequisite: BIOL 205 or permission of instructor
Activity: Seminar 1 Course Unit

BIOL 483 Epigenetics
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from an alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Taught by: Wagner D
Course usually offered in fall term
Also Offered As: CAMB 483
Prerequisite: BIOL 221
Activity: Lecture 1 Course Unit
BIOL 484 Cell Motility and the Cytoskeleton
Cytoskeleton and cell motility play a crucial role in many aspects of normal and pathological physiology of individual cells, tissues, and whole organisms, including morphogenesis, immune response, wound healing, oncogenesis, and infection. This course will cover current topics in cell biology with emphasis on cytoskeleton and cell motility and their roles in these processes. Lectures, student presentations, and discussions in the class will be based on primary scientific literature.
Taught by: Svitkina
Course usually offered in fall term
Prerequisite: BIOL 205
Activity: Seminar
1 Course Unit

BIOL 485 The RNA World: A functional and computational analysis
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, student presentations, and discussions will be based on readings from the primary literature.
Taught by: Gregory
Course offered spring; odd-numbered years
Also Offered As: CAMB 485
Prerequisite: BIOL 221 required; BIOL 421 strongly recommended
Activity: Seminar
1 Course Unit

BIOL 486 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to the next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.
Taught by: Lampson
Course offered spring; even-numbered years
Also Offered As: CAMB 486
Prerequisite: BIOL 205 or permission of instructor
Activity: Seminar
1 Course Unit

BIOL 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Taught by: Berger
Course offered spring; odd-numbered years
Also Offered As: CAMB 493, GCB 493
Prerequisites: BIOL 221 required, BIOL 483 recommended
Activity: Seminar
1 Course Unit

BIOL 499 Advanced Independent Study
A second semester of independent study, in most cases extending the research undertaken for the BIOL 399. Apply at the Biology Academic Office, 102 Leidy Labs.
One term course offered either term
Prerequisite: BIOL 399 in the same laboratory as the proposed BIOL 499
Activity: Independent Study
1 Course Unit

BIOL 522 Human Evolutionary Genomics
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genetics are also welcome.
Taught by: Tishkoff
Course offered spring; even-numbered years
Also Offered As: CAMB 522
Prerequisite: Permission of instructor
Activity: Seminar
1 Course Unit

BIOL 527 Genetics for Computational Biology
This course will survey the discipline of molecular genetics. Two broad areas will be considered: 1) Molecular biology: DNA replication, transcription, translation, and the regulation of gene expression in both prokaryotic and eukaryotic systems and genomics and 2) Genetics: basic Mendelian & molecular genetics.
Taught by: Bonini/Gallagher/Guild/Keith
One term course offered either term
Also Offered As: BIOL 221
Prerequisites: BIOL 101 or 121. Permission of instructor required
Activity: Lecture
1 Course Unit
BIOL 535 Topics in Theory of Living Systems
The goal of this course is to discuss broad conceptual theories that address complex phenomena of living systems. Example questions include: what is the molecular architecture of information processing in cells and developing organisms? What is the functional architecture of cooperative organization from molecules in a cell to whole organism social interactions? How is complex multi-factorial information represented in organisms? The course will meet once a week and students will research relevant papers, lead discussions, and generate synopsis of group discussions. At the end of the semester, faculty and students are expected to co-author a review report of the discussed topics.
Taught by: Kim, Goulian, Akcay, Balasubramanian, Raj, Mossel
Course not offered every year
Also Offered As: PHYS 535
Prerequisite: Permission of instructor
Activity: Seminar
0.5 Course Units

BIOL 537 Advanced Computational Biology
Discussion of special research topics.
Taught by: Barash, Wang
Course usually offered in spring term
Also Offered As: GCB 537
Prerequisite: BIOL 437 or permission of instructor
Activity: Seminar
1 Course Unit

BIOL 540 Genetic Analysis
The logic and methodology of genetic analysis in plants and animals. This lecture course will focus on the use of mutations to study gene function and higher order biological processes, methods for reporting and manipulating gene expression, and analysis of the genetic basis of natural variation.
Taught by: Poethig
Course not offered every year
Prerequisite: BIOL 221 or permission of instructor
Activity: Lecture
1 Course Unit

BIOL 575 Microbial Diversity and Pathogenesis
Advanced version of BIOL 375: Microbial Diversity and Pathogenesis for graduate students only. Additional readings and course work as directed.
Taught by: Pohlschroder
Course usually offered in spring term
Also Offered As: BIOL 375
Prerequisites: Permission of instructor and BIOL 221 or equivalent
Activity: Lecture
1 Course Unit

BIOL 575 Microbial Diversity and Pathogenesis Lab
Advanced version of BIOL 376: Microbial Diversity and Pathogenesis Lab for graduate students only. Additional readings and course work as directed.
Taught by: Pohlschroder and Hogan
Course usually offered in spring term
Also Offered As: BIOL 376
Prerequisites: Permission of instructor, BIOL 575 previously or concurrently is recommended but not required
Activity: Laboratory
1 Course Unit

BIOL 586 Topics in Mathematical Biology
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed.
Course not offered every year
Also Offered As: MATH 586
Prerequisites: MATH 430 or equivalent is required. MATH 241 and 340 are recommended
Activity: Lecture
1 Course Unit

BIOL 599 Master's Independent Study
Laboratory research for the Master's of Science in Biology submatriculation program. Apply at the Academic Office, 102 Leidy Labs. One-term course offered either term
Activity: Independent Study
1.5 Course Units

BIOL 607 Writing for Biologists
The course teaches scientific writing in a workshop format, where students both produce weekly writing assignments and critique writing submitted by others. Emphasis is placed on simplicity and clarity with the goal of writing effectively to a wide audience beyond the student's immediate research area.
Taught by: Schmidt, P
Course usually offered in fall term
Activity: Seminar
0.5 Course Units
Notes: Course open to PhD students in Biology only.

BIOL 700 Advanced Topics in Current Biological Research
Integrative seminar on current biological research for first-year PhD students.
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: Course open to PhD students in Biology only.

BIOL 999 Independent Study and Research
Advanced laboratory research with a member of the Biology Graduate Group.
One-term course offered either term
Activity: Independent Study
0.5 Course Units
Notes: May be taken for multiple course unit credit
Biomedical Graduate Studies (BIOM)

BIOM 502 Molecular Basis of Disease
BIOM 502 introduces students to basic mechanisms of disease and examines a different disease each week. The focus of the course will be on understanding the pathophysiology of the diseases and how research has enhanced not only our knowledge of disease mechanisms but has also led to improved therapy for patients with these diseases.
Taught by: Dr. Hao Shen and John Lynch
Course usually offered in spring term
Prerequisites: Permission of course directors. This course is reserved for BGS students only.
Activity: Lecture
1 Course Unit

BIOM 510 Case Studies in Translational Research (CSTR) (Open to MD/PhD and VMD/PhD students only)
This course is open to MD/PhD, VMD/PhD and Biomedical Graduate Studies PhD students. All second year combined degree students are expected to take this course unless excused by Dr. Brass. Enrollment is limited to 24 students but interested VMD/PhD and BGS students are welcome as space permits. CSTR is a seminar style course where groups of students work with selected Penn faculty to prepare a discussion and literature review on disease topics. Topics will include gene therapy for hemophilia, retinal disease and wound healing, cytokine therapies for immune disorders, genetic sleep disturbances and vaccine development. Most of the course will focus on the analysis of successful translational research projects that are taking place here at Penn.
Taught by: Drs. Mitch Weiss, Emma Meagher and Skip Brass
Course usually offered in fall term
Prerequisites: Prerequisite: Must be in the MD/PhD or VMD/PhD program and have completed the first year of training.
Activity: Seminar
1 Course Unit

BIOM 555 Regulation of the Genome
Regulation of gene expression including chromatin structure, transcription, DNA modification, RNA processing, translation, control of gene expression via microRNAs and post-translational processes.
Taught by: Drs. Zhaoan Zhou and Ben Black
Course usually offered in spring term
Prerequisite: Permission of Instructors
Activity: Lecture
1 Course Unit

BIOM 600 Cell Biology
BIOM 600 is an intermediate level graduate course designed to introduce students to the molecular components and physiological mechanisms that underlie the structure and function of cells. The course is designed as an in-depth survey to cover general concepts central to the field of biochemistry and cell biology and to emphasize these concepts within the context of current scientific research questions and technical approaches. Lectures will focus on recent discoveries in contemporary cell biology involving (i) basic cellular biochemistry; (ii) mechanisms of membrane transport and excitability; (iii) intracellular compartmentalization and protein vesicle targeting, organelle biogenesis; (iv) cytoskeletal architecture, cell motility and adhesion; and (v) molecular mechanisms of signal transduction. Efforts will be made to familiarize students with recent technical advances in molecular, biochemical, microscopic, spectroscopic, and electrophysiological techniques.
Taught by: Dr. Richard Assoian, Director, Dr. Kurt Engleka, Assistant Course Director, Theme Directors: Drs. Mickey Marks, John Weisel, Toshi Hoshi, and Xiaolu Yang
Course usually offered in fall term
Prerequisite: Permission of Instructor
Activity: Lecture
1 Course Unit

BIOM 611 Statistics in Experimental Design and Analysis
BIOM 611 is an introductory course providing an overview of fundamental concepts in biostatistics as they relate to experimental design and analysis. It introduces the student as well to the related concepts of premis and reproductive. The first unit introduces the scientific method as a series of six steps. In the first unit we explore the strength of evidence supporting a particular research hypothesis, consider the generalizability of our conclusion and estimate the magnitude of the effect. The second unit specifically introduces methods for comparing means and proportions between groups, and the analysis of paired data. We conclude by considering differences in means and proportions between multiple groups and associations between quantitative variables. Analysis of variance (ANOVA), correlation and linear regression are explored. Statistical methods will be implemented using the software package R (in Rstudio). Students will have an opportunity to code directly in R or to use the graphical user interface, Rcmdr to facilitate work with R.
Taught by: Mary Putt, PhD
Course usually offered in spring term
Prerequisites: This course is NOT recommended for students with a strong quantitative background. Those of you with a strong background should take a statistics course with more rigorous mathematical underpinnings and or with exposure to more advanced statistical methods. Discuss with advisor or see the following page for detailed instructions. www.med.upenn.edu/bgs/documents/BGSStatisticsRequirements10-6-16.pdf
Activity: Lecture
1 Course Unit
Biomedical Informatics (BMIN)

BMIN 501 Introduction to Biomedical and Health Informatics
This course is designed to provide a survey of the major topic areas in medical informatics, especially as they apply to clinical research. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in education.
Taught by: Holmes
Course usually offered in fall term
Also Offered As: EPID 632
Activity: Lecture
1 Course Unit

BMIN 502 Databases in Biomedical Research
This course is intended to provide an in-depth, practical exposure to the design, implementation, and use of databases in biomedical research, and to provide students with the skills needed to design and conduct a research project using primary and secondary data. Topics to be covered include: database architectures, data normalization, database implementation, client-server databases, concurrency, validation, Structured-Query Language (SQL) programming, reporting, maintenance, and security. All examples will use problems or data from biomedical domains. MySQL will be used as the database platform for the course, although the principles apply generally to biomedical research and other relational databases.
Taught by: Holmes
Course usually offered in spring term
Also Offered As: EPID 635
Activity: Lecture
1 Course Unit

BMIN 503 Data Science for Biomedical Informatics
In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform explanatory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily shareable results with R and github.
Taught by: Himes
Course usually offered in fall term
Also Offered As: EPID 600
Activity: Lecture
1 Course Unit

BMIN 504 Special Topics in Biomedical and Health Informatics
This course is designed to provide an in-depth look at four topics that are of essential importance in biomedical informatics. Each topic will be allotted four consecutive weeks in the class schedule, as four modules, with the intention that each module becomes its own “mini-course.” The topics for each module may rotate from semester to semester, based on criteria such as historical importance to the current field of biomedical informatics research and/or practice, and cutting-edge developments in biomedical informatics.
Taught by: Moore
Two terms. student must enter first term.
Also Offered As: EPID 602
Prerequisites: BMIN 501: Introduction to Biomedical and Health Informatics, or permission of the instructor
Activity: Lecture
1 Course Unit

BMIN 505 Precision Medicine and Health Policy
Through a series of lectures, readings and response papers, students will learn about topics such as medical ethics, unintended consequences of medicine/research, genetics, genetic interpretation, hospital performance, and informatic methods to assess these factors. The informatics topics covered in this course include: decision support, genetic database, clinical interpretation of genetics, detection of bias in EMRs, detection of bias in guidelines, methods to ameliorate bias, mapping clinical guidelines to computable standards, performance assessment, machine learning, and artificial intelligence applications in this space.
Taught by: Boland
Course usually offered in fall term
Activity: Lecture
1 Course Unit

Biostatistics (BSTA)

BSTA 509 Introduction to Epidemiology
This course is a series of lectures designed to teach basic principles of epidemiologic research. It provides an overview of the types of research questions that can be addressed by epidemiologic methods. Topics covered include definitions of epidemiology; measures of disease frequency; measures of effect and association; epidemiologic study designs, both experimental and non-experimental; data collection methods; and an overview of analysis of epidemiologic studies. (The lectures for this course are identical to those in EPID 801)
Taught by: YuXiao Yang
Also Offered As: EPID 801
Activity: Lecture
0.5 Course Units

BSTA 511 Biostatistics in Practice
Taught by: Russell T. Shinohara
Course usually offered in fall term
Prerequisites: Open to Biostatistics student only.
Activity: Lecture
0.5 Course Units

BSTA 550 App Reg and Anal of Var
Also Offered As: PSYC 611, STAT 500
Activity: Lecture
1 Course Unit
BSTA 620 Probability I
This course covers Elements of (non-measure theoretic) probability necessary for the further study of statistics and biostatistics. Topics include set theory, axioms of probability, counting arguments, conditional probability, random variables and distributions, expectations, generating functions, families of distributions, joint and marginal distributions, hierarchal models, covariance and correlation, random sampling, sampling properties of statistics, modes of convergence, and random number generation.
Course usually offered in fall term
Prerequisites: Two semesters of calculus (through multivariable calculus), linear algebra; permission from the instructor.
Activity: Lecture
1 Course Unit

BSTA 621 Statistical Inference I
This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation.
Course usually offered in spring term
Prerequisites: BSTA 620, permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 622 Statistical Inference II
This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation.
Course usually offered in fall term
Prerequisite: BSTA 621; permission of instructor
Activity: Lecture
1 Course Unit

BSTA 630 Statistical Methods and Data Analysis I
This first course in statistical methods for data analysis is aimed at first-year Biostatistics students. It focuses on the analysis of continuous data. Topics include descriptive statistics (measures of central tendency and dispersion, shapes of distributions, graphical representations of distributions, transformations, and testing for goodness of fit); populations and sampling (hypotheses of differences and equivalence, statistical errors); one- and two-sample t tests; analysis of variance; correlation; nonparametric tests on means and correlations; estimation (confidence intervals and robust methods); categorical data analysis (proportions; statistics and test for comparing proportions; test for matched samples; study design); and regression modeling (simple linear regression, multiple regression, model fitting and testing, partial correlation, residuals, multicollinearity). Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated.
Course usually offered in fall term
Prerequisites: Multivariable calculus and linear algebra, BSTA 620 (may be taken concurrently) and permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 632 Statistical Methods for Categorical and Survival Data
This is the second half of the methods sequence, where the focus shifts to methods for categorical and survival data. Topics in categorical include defining rates; incidence and prevalence; the chi-squared test; Fisher’s exact test and its extension; relative risk and odds-ratio; sensitivity; specificity; predictive values; logistic regression with goodness of fit tests; ROC curves; the Mantel-Haenszel test; McNemar’s test; the Poisson model; and the Kappa statistic. Survival analysis will include defining the survival curve, censoring, and the hazard function; the Kaplan-Meier estimate, Greenwood’s formula and confidence bands; the log rank test; and Cox’s proportional hazards regression model. Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated.
Course usually offered in spring term
Prerequisites: BSTA 630, 620, 621 (may be taken concurrently), linear algebra, calculus and permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 651 Introduction to Linear Models and Generalized Linear Models
This course extends the content on linear models in BSTA 630 and BSTA 632 to more advanced concepts and applications of linear models. Topics include the matrix approach to linear models including regression and analysis of variance, general linear hypothesis, estimability, polynomial piecewise, ridge, and weighted regression; regression and collinearity diagnostics; multiple comparisons; fitting strategies; simple experimental designs (block designs, split plot); random effects models; Best Linear Unbiased Prediction. In addition, generalized linear models will be introduced with emphasis on the binomial, logit and Poisson log-linear models. Applications of methods to example data sets will be emphasized.
Course usually offered in spring term
Prerequisites: Linear algebra, calculus, BSTA 620, 630. BSTA 621 and 632 (may be taken concurrently), permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 656 Longitudinal Data Analysis
This course covers both the applied aspects and methods developments in longitudinal data analysis. In the first part, we review the properties of the multivariate normal distribution and cover basic methods in longitudinal data analysis, such as exploratory data analysis, two-stage analysis and mixed-effects models. Focus is on the linear mixed-effects models, where we cover restricted maximum likelihood estimation, estimation and inference for fixed and random effects models and models for serial correlations. We will also cover Bayesian inference for linear mixed-effects models. The second part covers advanced topics, including nonlinear mixed-effects models, GEE, generalized linear mixed-effects models, nonparametric longitudinal models, functional mixed-effects models, and joint modeling of longitudinal data and the dropout mechanism.
Prerequisites: BSTA 621, 631 or 632, 651, 653 or 754, permission of instructor.
Activity: Lecture
1 Course Unit
BSTA 660 Design of Observational Studies
This course will cover statistical methods for the design and analysis of observational studies. Topics for the course will include epidemiologic study designs, issues of confounding and hidden bias, matching methods, propensity score methods, sensitivity analysis, and instrumental variables. Case studies in biomedical research will be presented as illustrations.
Prerequisites: BSTA 621, 631 or 632, 651, permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 661 Design of Interventional Studies
This course is designed for graduate students in statistics or biostatistics interested in the statistical methodology underlying the design, conduct, and analysis of clinical trials and related interventional studies. General topics include designs for various types of clinical trials (Phase I, II, III), endpoints and control groups, sample size determination, and sequential methods and adaptive design. Regulatory and ethical issues will also be covered.
Prerequisites: BSTA 621, 631 or 632, permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 670 Statistical Computing
This course concentrates on computational tools, which are useful for statistical research and for computationally intensive statistics. Through this course you will develop a knowledge base and skill set of a wide range of computational tools needed for statistical research. Topics include computer storage, architecture and arithmetic; random number generation; numerical optimization methods; spline smoothing and penalized likelihood; numerical integration; simulation design; Gibbs sampling; bootstrap methods; and the EM algorithm.
Prerequisites: BSTA 651, 620, 621 or equivalents or permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 699 Lab Rotation
Activity: Laboratory
0.33 Course Units

BSTA 754 Advanced Survival Analysis
This advanced survival analysis course will cover statistical theory in counting processes, large sample theory using martingales, and other state of the art theoretical concepts useful in modern survival analysis research. Examples in deriving rank-based tests and Cox regression models as well as their asymptotic properties will be demonstrated using these theoretical concepts. Additional potential topics may include competing risk, recurrent event analysis, multivariate failure time analysis, joint modeling of survival and longitudinal data, sample size calculations, multistate models, and complex sampling schemes involving failure time data.
Course usually offered in fall term
Prerequisites: BTA 622 (may be taken concurrently) and permission of instructor.
Activity: Lecture
1 Course Unit

BSTA 820 Statistical Inference III
Statistical inference including estimation, confidence intervals, hypothesis tests and non-parametric methods.
Taught by: Faculty
Course usually offered in spring term
Also Offered As: STAT 972
Prerequisites: To be advised.
Activity: Lecture
1 Course Unit

BSTA 899 Pre-Dissertation Research
Activity: Lecture
0.5 Course Units

BSTA 920 Guided Dissertation Research
Activity: Masters Thesis
1 Course Unit

BSTA 990 Guided Dissertation Research
Activity: Masters Thesis
1 Course Unit

BSTA 995 Dissertation
One-term course offered either term
Activity: Dissertation
1 Course Unit

Biotechnology (BIOT)

BIOT 599 Biot Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

Business Economics & Public Policy (BEPP)

BEPP 201 Public Finance and Policy.
This course explores the economics and politics of public policy to provide an analytic framework for considering why, how, and with what success/failure government intervenes in a variety of policy areas. Particular attention will be paid to important policy issues relating to taxation, social security, low-income assistance, health insurance, education (both K-12 and higher ed), the environment, and government deficits. The costs and benefits of alternative policies will be explored along with the distribution of responsibilities between the federal, state and local governments. While the course will focus primarily on U.S. policies, the topics covered (e.g. tax reform, deficits versus austerity, etc.) are currently at the center of the policy debate in many other industrialized countries as well.
Taught by: Katja Seim.
One-term course offered either term
Also Offered As: BEPP 770
Prerequisites: BEPP 770
Activity: Lecture
1 Course Unit
BEPP 203 Business in the Global Political Environment.
This course examines the non-market components of business and the broader political, regulatory, and civil context in which companies function. This course addresses how businesses interact with political and regulatory institutions, as well as the general public, with a focus on the global economy. The first portion examines the realities associated with political economy and the actual making of laws and regulations by imperfect politicians and regulators. The second portion analyzes the economic rationale for legislation and regulation in the presence of market failures. The course covers specific market failures and potential solutions including government regulation.
Taught by: Santosh Anagol/Shing-yi Wang
One term course offered either term
Prerequisites: ECON 1 or equivalent.
Activity: Lecture
1 Course Unit

BEPP 208 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of home builders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611 and MGEC 612 (MBAs). Non-Wharton students should have taken the equivalent course in the College.
Taught by: Joseph Gyourko
Course usually offered in spring term
Also Offered As: BEPP 708, REAL 208, REAL 708
Prerequisites: Managerial Economics (BEPP 250) or equivalent.
Activity: Lecture
1 Course Unit
Notes: Lecture with discussion required.

BEPP 210 Firms, Markets and Public Policy
Many dimensions of firms’ strategies, including agreements with suppliers and competitors, mergers and acquisitions, pricing, and technology standards development, among others, are subject to the oversight of regulatory bodies and governmental agencies. This course studies how public policy impacts firms’ strategic choices in a host of economic environments. We will analyze pricing strategies including versioning and bundling; product standardization decisions; the management of complementarities between products; the role of network effects and platform competition; and how firms can take advantage of the regulatory environment they operate in when making such decisions.
We will study, for example, why Sony won the Blu-Ray format war against the widely supported HD-DVD format; how the FCC plans to incentivize television broadcasters to return spectrum holdings for auction to wireless broadband providers; and how contracts with content providers affect firms’ strategic interactions in the e-reader market. To understand how firm strategy and public policy interact, the course will rely on a mix of simple but rigorous analytical models and case studies.
Taught by: Katja Seim.
One term course offered either term
Also Offered As: BEPP 710
Prerequisites: BEPP 250.
Activity: Lecture
1 Course Unit

BEPP 212 Economic Analysis of Law
The course provides an introduction to the economic analysis of law and legal institutions. Our goal is to develop intuitions about the ways law simultaneously shapes and responds to private behavioral incentives. In the first half of the course, we will survey the application of key economic concepts to basic features of the Anglo-American common law of property, contract, and tort. In the second half of the course, we will use the tools developed in our survey to focus in depth on antitrust policy in conventional as well as network industries.
Taught by: Vincent Buccola.
One term course offered either term
Also Offered As: LGST 212
Prerequisites: ECON 1 or ECON 10.
Activity: Lecture
1 Course Unit

BEPP 214 Nonprofit Sector: Economic Challenges and Strategic Responses.
The nonprofit sector plays a key role in the provision of many goods and services which are fundamental in our society and which may be difficult to provide using market mechanisms alone. Education, health care, charitable services, and the arts are some primary examples of these. Nonprofit organizations operate in service of specific social missions rather than profit maximization, but in order to serve those missions effectively while ensuring their own survival, they must also make many of the decisions typically associated with private firms. That is, they must compete for funding, human resources, and consumers of their services, they must manage and invest their resources efficiently, and they must innovate new products and services over time. Importantly, the latter requirements may at times come in conflict with the organizations’ social values. As a result, nonprofit organizations as economic decision-makers confront a number of unique challenges to their success and growth.
The goal of this course is to give students a broad overview of the economic, organizational, and strategic concerns facing the non-profit sector. Our objective is to characterize the unique economic environment, identify effective strategic governance, and management approaches, and explore how appropriate measurement techniques can can inform the policy treatment of nonprofits. This course is organized around a number of lectures, readings and outside speakers, a midterm exam and a required project.
Taught by: Ashley Swanson.
Prerequisites: None.
Activity: Lecture
1 Course Unit

BEPP 220 Behavioral Economics, Markets, and Public Policy
Behavioral economics has revealed a variety of systematic ways in which people deviate from being perfectly selfish, rational, optimizing agents. These findings have important implications for government policy and firm behavior. This course will explore these implications by answering two main questions: (1) what does behavioral economics imply for when and how the government should intervene in markets? (2) What does behavioral economics imply for firms’ pricing and production decisions? The course will present the standard economic approaches to answering these questions and then explore how answers change when we consider that people act in behavioral ways. Towards the end of the course, we will investigate specific policy questions, allowing us to debate solutions while hearing from policy makers operating in a world of behavioral agents.
Taught by: Judd Kessler.
Activity: Lecture
1 Course Unit
BEPP 230 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.
Taught by: Robert Inman
Course usually offered in fall term
Also Offered As: BEPP 899, FNCE 230, REAL 230
Prerequisites: ECON 1, FNCE 101.
Activity: Lecture
1 Course Unit

BEPP 233 Consumers, Firms and Markets in Developing Countries
Nearly four-fifths of the world’s population lives in low income or developing countries. Though currently far behind the U.S., the 15 fastest growing economies/markets in the world are all developing countries. And developing countries already account for 6 of the world’s 15 largest economies. This course will examine economic life, including consumers, firms and markets, in low income countries. We will apply both economic theory and empirical analysis for analyzing the roles of both business and government in consumption, production and market equilibria.
Taught by: Robert Jensen
One term course offered either term
Activity: Lecture
1 Course Unit

BEPP 236 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on development of securitization markets and addresses current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and potential market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Taught by: Susan Wachter
Course usually offered in spring term
Also Offered As: BEPP 836, REAL 236, REAL 836
Prerequisites: Econ 1 and Econ 2 or Econ 10.
Activity: Lecture
1 Course Unit

BEPP 250 Managerial Economics
This course will introduce you to "managerial economics" which is the application of microeconomic theory to managerial decision-making. Microeconomic theory is a remarkably useful body of ideas for understanding and analyzing the behavior of individuals and firms in a variety of economic settings. The goal of the course is for you to understand this body of theory well enough so that you can effectively analyze managerial (and other) problems in an economic framework. While this is a "tools" course, we will cover many real-world applications, particularly business applications, so that you can witness the usefulness of these tools and acquire the skills to use them yourself. We will depart from the usual microeconomic theory course by giving more emphasis to prescription: What should a manager do in order to achieve some objective? That course deliverable is to compared with description: Why do firms and consumers act the way they do? The latter will still be quite prominent in this course because only by understanding how other firms and customers behave can a manager determine what is best for him or her to do. Strategic interaction is explored both in product markets and auctions. Finally, the challenges created by asymmetric information - both in the market and within the firm - are investigated.
One term course offered either term
Also Offered As: BEPP 950
Prerequisites: ECON 103 or equivalent. MATH 103 or equivalent.
Activity: Lecture
1 Course Unit

BEPP 261 Risk Analysis and Environmental Management
This course is designed to introduce students to the complexities of making decisions about threats to human health and the environment when people's perceptions of risks and their decision-making processes differ from expert views. Recognizing the limitations of individuals in processing information, the course explores the role of techniques such as decision analysis, cost-benefit analysis, risk assessment and risk perception in structuring risk-management decisions. We will also examine policy tools such as risk communication, incentive systems, third party inspection, insurance and regulation in different problem contexts. The problem contexts for studying the interactions between analysis, perceptions, and communication will include risk-induced stigmatization of products (e.g. aflatoxins, British beef), places (e.g. Love Canal), and technologies (e.g. nuclear power); the siting of noxious facilities, radon, managing catastrophic risks including those from terrorism. A course project will enable students to apply the concepts discussed in the course to a concrete problem.
Taught by: Howard Kunreuther
Course not offered every year
Also Offered As: BEPP 761, BEPP 961, OIDD 261, OIDD 761
Prerequisites: ECON 1 helpful.
Activity: Lecture
1 Course Unit
BEPP 263 Environmental & Energy Economics and Policy
This course examines environmental and energy issues from an economist's perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First, we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hydrocarbon resources face. We then shift gears to the sources of environmental problems, and how policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics, such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles.
Taught by: Arthur van Benthem
Also Offered As: OIDD 263
Activity: Lecture
1 Course Unit

BEPP 280 Applied Data Analysis.
This course will examine how and when data can be used specifically to infer whether there is a causal relationship between two variables. We will emphasize (a) the critical role of an underlying economic theory of behavior in interpreting data and guiding analysis, as well as (b) a range of advanced techniques for inferring causality from data, such as randomized controlled trials, regression discontinuity, difference-in-difference, audit study (mystery shopping) approaches and stock-market event studies. The issue of causality, and the relevance of thinking about models and methods for inferring causality, is just as central and important for "Big Data" as it is when working with traditional data sets in business and public policy. The emphasis will not be on proofs and derivations but rather on understanding the underlying concepts, the practical use, implications and limitations of techniques. Students will work intensively with data, drawing from examples in business and public policy, to develop the skills to use data analysis to make better decisions. All analysis will be conducted using R. The goals of the course are for students to become expert consumers able to interpret and evaluate empirical studies as well as expert producers of convincing empirical analysis themselves.
Taught by: Santosh Anagol.
One term course offered either term
Also Offered As: BEPP 780
Prerequisites: Relevant introductory statistics course covering at least hypothesis testing and linear regression (STAT 102,112, 431 or equivalent) (i.e. ECON 104)), or at the discretion of the instructor.
Activity: Lecture
1 Course Unit

BEPP 284 Game Theory for Business and Life
The objective of this course is to make you more skilled in the art and science of strategic reasoning. Strategic situations permeate our lives and we will examine many such situations through the lens of game theory. The course is composed of game-theoretic concepts, applications, and experiential learning. The bulk of the applications are to business situations including investment and entry, bargaining, managerial incentive contracts, network effects, product location, and two-sided markets. However, given the ubiquitous presence of strategic situations in human societies, applications will extend to politics, war, sports, history, crime, theology, and every day life, and cover the existence of God, steroid use in sports, racial discrimination, land conflict, trench warfare in World War I, and the Medieval Law Merchant. Students will regularly participate in experiments involving strategic reasoning, and form teams to compete in a simulated industry environment.
Taught by: Joseph Harrington
One term course offered either term
Prerequisite: None
Activity: Lecture
1 Course Unit

BEPP 289 Nations, Politics, and Market
This course is intended to deepen understanding of the major contemporary issues in the world economy. The focus is on the "big picture" of global economic developments and the evolution of economic thought over the last one hundred years. The topics include: financial market booms and busts; business cycles; monetary and fiscal policies; inequality; the social welfare state; technological change and economic growth; and international trade and financial arrangements. The time period covers: the Roaring Twenties; the Great Depression, the post war Golden Age (1945-1973); the stagflation of the 1970s; the Washington Consensus era of the market liberalization (1980-2007); and the 2008 financial crisis and Great Recession of 2007-2010 and its aftermath. The course also explores different schools of thought. The course will chronicle and compare economic policy and performance of the United States, Europe, Japan and emerging markets (Asia, Latin America, Africa).
Taught by: Stephen Golub
Course usually offered in spring term
Also Offered As: BEPP 789
Prerequisites: Econ 2 or its equivalent.
Activity: Lecture

BEPP 299 Independent Study
One term course offered either term
Activity: Independent Study
1 Course Unit
BEPP 305 Risk Management
The last financial crisis and subsequent recession provide ample evidence that failure to properly manage risk can result in disaster. Individuals and firms confront risk in nearly all decisions they make. People face uncertainty in their choice of careers, spending and saving decisions, family choices and many other facets of life. Similarly, the value that firms create by designing and marketing good products is at risk from a variety of sources. The bankruptcy of a key supplier, sharp rise in cost of financing, destruction of an important asset, impact of global warming, or a liability suit can quickly squander the value created by firms. In extreme cases, risky outcomes can bankrupt a firm, as has happened recently to manufacturers of automobile parts and a variety of financial service firms. The events since the Global Financial Crisis also offer stark reminders that risk can impose significant costs on individuals, firms, governments, and society as a whole. This course explores how individuals and firms assess and evaluate risk, examines the tools available to successfully manage risk and discusses real-world phenomena that limit the desired amount of risk-sharing. Our focus is primarily on explaining the products and institutions that will serve you better when making decisions in your future careers and lives.
One term course offered either term
Also Offered As: BEPP 805, LAW 741
Prerequisites: Students are assumed to have introductory knowledge of statistics, microeconomics, and finance at the level of the Wharton undergraduate classes STAT 101, BEPP 250, and F NCE 100.
Activity: Lecture
1 Course Unit

BEPP 322 Business Insurance and Estate Planning.
This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g. common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Reading consist of textbooks, case studies, and bulk pack articles.
Taught by: Victor Hallman.

Course usually offered in fall term
Also Offered As: BEPP 851, STAT 451, STAT 851
Prerequisites: None.
Activity: Lecture
1 Course Unit

BEPP 452 Fundamentals of Actuarial Science I.
This course is the usual entry point in the actuarial science program. It is required for students who plan to concentrate or minor in actuarial science. It can also be taken by others interested in the mathematics of personal finance and the use of mortality tables. For future actuaries, it provides the necessary knowledge of compound interest and its applications, and basic life contingencies definition to be used throughout their studies. Non-actuaries will be introduced to practical applications of finance mathematics, such as loan amortization and bond pricing, and premium calculation of typical life insurance contracts.
Main topics include annuities, loans and bonds; basic principles of life contingencies and determination of annuity and insurance benefits and premiums.
Taught by: Jean Lemaire.
Course usually offered in spring term
Also Offered As: BEPP 852, STAT 452, STAT 852
Prerequisites: One semester of Calculus.
Activity: Lecture
1 Course Unit

BEPP 453 Actuarial Statistics.
Taught by: Jean Lemaire.
Course usually offered in fall term
Also Offered As: BEPP 853, STAT 453, STAT 853
Prerequisites: None.
Activity: Lecture
1 Course Unit

BEPP 454 Applied Statistical Methods for Actuaries.
One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possible entry point into the actuarial science program. No INSR course is a prerequisite for INSR 854. The Society of Actuaries has approved INSR 854 for VEE credit on the topic of time series.
Taught by: Jean Lemaire.
Course usually offered in spring term
Also Offered As: BEPP 854, STAT 454, STAT 854
Prerequisites: None.
Activity: Lecture
1 Course Unit
BEPP 708 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of home-builders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 250 (undergrads) or MGEC 611/MGEC612 (MBAs). Non-Wharton students should have taken the equivalent course in the College.
Taught by Joseph Gyourko
Course usually offered in spring term
Also Offered As: BEPP 208, REAL 208, REAL 708
Prerequisites: Microeconomics for Managers (MGEC 611) and Microeconomics for Managers (Advanced) (MGEC 612) or equivalent.
Activity: Lecture
1 Course Unit
Notes: Lecture with discussion required.

BEPP 710 Firms, Markets and Public Policy.
Many dimensions of firms’ strategies including agreements with suppliers and competitors, mergers and acquisitions, pricing and technology standards development, among others, are subject to the oversight of regulatory bodies and governmental agencies. This course studies how public policy impacts firms’ strategic choices in a host of economic environments. We will analyze pricing strategies including versioning and bundling; product standardization decisions; the management of complementarities between products; the role of network effects and platform competition; and how firms can take advantage of the regulatory environment they operate in when making such decisions. We will study, for example, why Sony won the Blu-Ray format at war against the widely supported HD-DVD format, how the FCC plans to incentivize television broadcasters to return spectrum holdings for auction to wireless broadband providers; and how contracts with content providers affect firms’ strategic interactions in the e-reader market. To understand how firm strategy and public policy interact, the course will rely on a mix of simple but rigorous analytical models and case studies.
Taught by Katja Seim.
Also Offered As: BEPP 210
Prerequisites: MGEC611, MGEC 612 or equivalent.
Activity: Lecture
1 Course Unit

BEPP 761 Risk Analysis and Environmental Management.
This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnership in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem. Cross-listed with OPIM 761.
Taught by Howard Kruetter.
Course not offered every year
Also Offered As: BEPP 261, BEPP 961, OIDD 261, OIDD 761
Prerequisites: None, but a basic understanding of microeconomics helpful.
Activity: Lecture
1 Course Unit

BEPP 763 Energy Markets & Policy
Over the last several decades, energy markets have become some of the most dynamic markets of the world economy. Traditional fossil fuel and electricity markets have been seen a partial shift from heavy regulation to market-driven incentives, while rising environmental concerns have led to a wide array of new regulations and "environmental markets". The growth of renewable energy could be another source of rapid change, but brings with it a whole new set of technological and policy challenges. This changing energy landscape requires quick adaptation from energy companies, but also offers opportunities to turn regulations into new business. The objective of this course is to provide students with the economist's perspective on a broad range of topics that professionals in the energy industry will encounter. Topics include the effect of competition, market power and scarcity on energy prices, the impact of deregulation on electricity and fossil fuel markets, extraction and pricing of oil and gas, geopolitical uncertainty and risk in hydrocarbon investments, the environmental impact and policies related to the energy sector, environmental cap-and-trade markets, energy efficiency, the economics and finance of renewable energy, and recent developments in the transportation sector.
Taught by Arthur van Benthem
Also Offered As: OIDD 763
Activity: Lecture
1 Course Unit

BEPP 770 Introduction to Business Economics and Public Policy.
This course explores the economics and politics of public policy to provide an analytic framework for considering why, how, and with what success/failure government intervenes in a variety of policy areas. Particular attention will be paid to important policy issues relating to taxation, social security, low-income assistance, health insurance, education (both K-12 and higher ed), the environment, and government deficits. The costs and benefits of alternative policies will be explored along with the distribution of responsibilities between the federal, state, and local governments. While the course will focus primarily on U.S. policies, the topics covered (e.g. tax reform, deficits versus austerity, etc.) are currently at the center of the policy debate in many other industrialized countries as well.
Taught by Katja Seim.
Two terms. student may enter either term.
Also Offered As: BEPP 201
Prerequisites: MGEC 611, MGEC 612 or equivalent.
Activity: Lecture
1 Course Unit
BEPP 773 Urban Fiscal Policy.
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

Taught by: Robert Inman.
Course usually offered in fall term
Also Offered As: FNCE 730, REAL 730

BEPP 811 Risk and Crisis Management.
The growing connectivity of global economies and financial markets has produced widespread risk contagion, resulting in increased volatility and an ever-increasing demand for risk capital. This course focuses on understanding the drivers of risk contagion and ways to restore confidence in worldwide markets for pure and financial risk. The class begins with an evaluation of recent financial and pure risk events: for example, the sovereign debt crisis, Japanese earthquake, and BP Deepwater Horizon. We explore how these events are being financed in innovative ways via the capital and insurance markets. Next we emphasize the role of risk management in the preservation and creation of value, helping firms identify, measure, monitor and manage/finance risk. Doing so results in risk-adjusted returns (or return on risk-adjusted capital) that exceed the cost of capital. We devote substantial focus on the practical implementation of effective risk management/financing, given evolving regulatory and governance standards. In addition, we explore opportunities for corporate growth as well as public/private partnerships. The course will conclude with a discussion of emerging markets and the role of risk management in developing a middle class needing new forms of risk transfer/financing.
One-term course offered either term
Prerequisites: None
Activity: Lecture
0.5 Course Units
BEPP 812 Markets for Pure Risk.
The increased frequency and severity of pure risk events hinders corporations' abilities to execute strategy and deliver sustainable financial results to stakeholders. Prominent recent examples include disruptions from Hurricane Katrina, Japan's earthquake/nuclear disaster/supply chain breakdowns, Thai floods, U.S. wildfires, and global terrorist attacks. At the same time, both industrialized and emerging economies understand that the management and financing of pure risk is critical to the success of their economies. Consequently, the rising demand for risk capital has ushered in several capital market innovations and public/private partnerships necessary for managing and financing pure risk. This course investigates these issues, beginning with an introduction to pure risks, their centers of gravity and global consequences for corporations, consumers, and the macroeconomics. Next we move on to traditional sources of risk capital provided to corporations and governments via insurance and reinsurance mechanisms. The course concludes with a discussion of new sources of risk capital provided by capital markets including catastrophic risk bonds, securitization of mortality and liability risk, and other forms of insurance-linked securities. Our focus is on the supply of risk capital to corporations and economies, recognizing the unique position of emerging economies in this nexus. Throughout, the class emphasizes current real-world cases to illustrate the competitive differences in strategies taken by hedge funds, private equity pools, and insurers, as they address the increasing need for risk capital around the world. This course complements BEPP 811, Risk and Crisis Management, which focuses on how firms can use various hedging instruments to manage pure risks (that is, BEPP811's emphasis is primarily on the demand side of markets for pure risks whereas BEPP 812 examines the supply side of these markets). However, BEPP 811 is not required as a prerequisite.
Format: Lecture and discussion, midterm and final.

BEPP 851 Fund of Act Sci I (formerly INSR 851)
Course usually offered in fall term
Also Offered As: BEPP 451, STAT 451, STAT 851
Prerequisites: One semester of Calculus.
Activity: Lecture
1 Course Unit

BEPP 852 Fund of Actuarial Sci II (formerly INSR 852)
This specialized course is usually only taken by Wharton students who plan to concentrate in actuarial science and Penn students who plan to minor in actuarial science mathematics. It provides a comprehensive analysis of advanced life contingencies problems such as reserving, multiple life functions, multiple decrement theory with application to the valuation of pension plans.
Course usually offered in spring term
Also Offered As: BEPP 452, STAT 452, STAT 852
Prerequisites: STAT 851 OR BEPP 851.
Activity: Lecture
1 Course Unit

BEPP 853 Actuarial Statistics (formerly INSR 853)
This course covers models for insurer's losses, and applications of Markov chains. Poisson processes, including extensions such as non-homogenous, compound, and mixed Poisson processes are studied in detail. The compound model is then used to establish the distribution of losses. An extensive section on Markov chains provides the theory to forecast future states of the process, as well as numerous applications of Markov chains to insurance, finance and genetics. The course is abundantly illustrated by examples from the insurance and finance literature. While most of the students taking the course are future actuaries, other students interested in applications of statistics may discover in class many fascinating applications of stochastic processes and Markov chains.
Taught by: Lemaire
Course usually offered in fall term
Also Offered As: BEPP 453, STAT 453, STAT 853
Prerequisites: Two semesters of Statistics.
Activity: Lecture
1 Course Unit
BEPP 854 Appl Stat Meth For Actu (formerly INSR 854)
One half of the course is devoted to the study of time series, including ARIMA modeling and forecasting. The other half studies modifications in random variables due to deductibles, co-payments, policy limits, and elements of simulation. This course is a possibly entry point into the actuarial science program. No INSR course is a prerequisite for INSR 854. The Society of Actuaries has approved INSR 854 for VEE credit on the topic of time series.
Course usually offered in spring term
Also Offered As: BEPP 454, STAT 454, STAT 854
Prerequisites: One semester of Probability.
Activity: Lecture
1 Course Unit

BEPP 895 Global Business Week: Cuba Before and After Normalization of US Relations
Also Offered As: HCMG 895
Activity: Lecture
0.5 Course Units

BEPP 900 Research Seminar.
Of the many ways that doctoral students typically learn how to do research, two that are important are watching others give seminar presentations (as in Applied Economics Seminars) and presenting one's own research. The BEPP 900 course provides a venue for the latter. Wharton doctoral students enrolled in this course present applied economics research. Presentations both of papers assigned for other classes and of research leading toward a dissertation are appropriate in BEPP 900. This course aims to help students further develop a hands-on understanding of the research process. All doctoral students with applied microeconomic interests are encouraged to attend and present. Second and third year Applied Economic Ph.D. students are required to enroll in BEPP 900 and receive one-semester credit per year of participation. Taught by: Shing-yi Wang and Corinne Low
Two terms, student may enter either term.
Prerequisites: None.
Activity: Seminar
0.5 Course Units
Notes: Permission of instructor required.

BEPP 904 Experimental Economics
This course will help prepare you to run your own economics laboratory and field experiments. Experimental methods have been widely adopted by economists to develop new insights, and some economic theories and hypotheses are uniquely well-suited for testing with experimental tools and data. Achieving high internal and external validity requires careful experimental design. Substantive areas of application in the course will include market equilibrium, asset bubbles, learning in games, public good provision, and labor market relationships. Additional topics may include biases in individual decision-making, field experiments in development economics; and happiness, neuroeconomics, and behavioral/experimental welfare economics. Economists’ typical interests in strategic and market-based interactions raise particular methodological challenges and opportunities.
Course not offered every year
Also Offered As: OIDD 904
Activity: Lecture
1 Course Unit

BEPP 911 Empirical Public Policy
This course examines econometric research on a variety of topics related to public policy, with the goal of preparing students to undertake academic-caliber research. The course is not an econometrics or statistics course per se; rather, it focuses on research designs with observational data and how econometric techniques are applied in practice. The course aims to train students to do applied economic research that involves measuring effects of theoretical or practical interest. It proceeds in two major parts. The first part examines endogeneity and inference about causal relationships, instrumental variables methods and critiques, and panel data methods. The second part of the course addresses 'structural' econometric modeling. Topics covered in this part include sorting and selection, entry models, and counterfactual analyses of policy changes. The course proceeds by analyzing, in detail, approximately 24 well-known empirical research papers in applied economics or related fields. These include public economics and tax policy, labor economics, law and economics, health care policy, industrial organization and competition, transportation demand and policy, and others.
Taught by: Ulrich Doraszelski
Course usually offered in spring term
Prerequisites: A graduate-level statistics or econometrics course.
Activity: Lecture
1 Course Unit

BEPP 931 Numerical Methods in Economics
The objective of this course is to introduce graduate students to computational approaches for solving economic models. We will formulate economic problems in computationally tractable form and use techniques from numerical analysis to solve them. Examples of computational techniques in the current economics literature as well as discuss areas where these techniques may be useful in future research will be disclosed. We will pay particular attention to methods for solving dynamic optimization problems and computing equilibria of games. The substantive applications will cover a wide range of problems including industrial organization, game theory, macroeconomics, finance, and econometrics.
Taught by: Ulrich Doraszelski
One term course offered either term
Prerequisites: None.
Activity: Lecture
1 Course Unit

BEPP 932 Contract Theory and Applications
The course provides an advanced introduction to the theory of contracts and its mixture of foundational theories and applications to fields such as labor, reinsurance organization.
Course usually offered in spring term
Prerequisite: None
Activity: Lecture
1 Course Unit
BEPP 933 Public Economics: Social Insurance and Government Expenditures
The first part of this course will examine the rationale for and economic impact (e.g., on saving, labor supply, etc.) of social insurance programs such as social security, unemployment insurance and disability insurance. The next major part of the course will explore these same issues for government interventions in health insurance markets. The course will then cover research on public goods, externalities, fiscal federalism, and economic stimulus (including the government's recent response to the "Great Recession") before proceeding to an exploration of the government's role in K-12 and high education. Both theoretical and empirical evidence will be covered along with a mix of classic studies and more cutting-edge research. Throughout the course we will discuss the tradeoffs - for example between the protection and distortion of social insurance programs - that influence government's optional role. While the focus will be on evidence from the U.S., some research from other industrialized and developing countries will also be covered.
Prerequisites: None.
Activity: Lecture
1 Course Unit

BEPP 934 Economics of Risk and Time
This course deals with the economic theory of supply, demand, and equilibrium in savings and insurance markets, including social insurance. We will review decision models under conditions of risk and use these to address problems of optimal insurance, moral hazard and adverse selection, social security, and contract enforcement.
Course usually offered in fall term
Prerequisites: Economics (Basic).
Activity: Lecture
1 Course Unit

BEPP 941 Development Economics
This course will cover current microeconomic issues of developing countries including poverty, risk, savings, human capital, and institutions. We will also explore the causes and consequences of market failures that are common in many developing countries with a focus on credit, land, and labor markets. The course is designed to introduce recent research with focus on empirical methods and testing theories with data.
Taught by: Shing-yi Wang/Robert Jensen
One-term course offered either term
Activity: Lecture
1 Course Unit

BEPP 950 Managerial Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and public sector expenditures. The administration and organization of the public sector.
Taught by: Postlevaite
One-term course offered either term
Also Offered As: BEPP 250
Prerequisites: Microeconomics, Economics 701 and 703. Any deviation from that must be approved by the Instructor.
Activity: Lecture
1 Course Unit

BEPP 951 Political Economy
This course will introduce the students to the basic models of formal political economy and methods for empirically estimating those models from policy data, both for the developed and developing economies. Topics to be covered will include Downsian electoral competition and median voter politics, theories of legislative politics including minimum winning coalition and universalistic (pork-barrel) politics, models of lobbying and political corruption, models of executive influence in legislative settings. Particular attention is paid to the role of formal (constitutional) and informal (non-constitutional) institutions as they determine policy outcomes in democratic societies, including majoritarian (first-past-the-post) and proportional representation systems of elections, partisan (party) and non-partisan (special interest) legislatures, executive agenda-setting and veto powers, federal and unitary forms of governance, and finally, the role of judicial review. Policy applications will focus on fiscal policy (taxes, spending, and debt), though students should feel free to apply the analysis to other public policies of interest. Students should have a firm understanding of micro-economic theory and applied econometrics.
Course usually offered in fall term
Prerequisites: PHD course with advanced microeconomics.
Activity: Lecture
1 Course Unit

BEPP 952 Economics and Law
Activity: Lecture
1 Course Unit

BEPP 961 Risk Analysis and Environmental Management
This course is designed to introduce students to the role of risk assessment, risk perception and risk management in dealing with uncertain health, safety and environmental risks including the threat of terrorism. It explores the role of decision analysis as well as the use of scenarios for dealing with these problems. The course will evaluate the role of policy tools such as risk communication, economic incentives, insurance, regulation and private-public partnerships in developing strategies for managing these risks. A project will enable students to apply the concepts discussed in the course to a concrete problem.
Taught by: Howard Kunreuther
Course not offered every year
Also Offered As: BEPP 261, BEPP 761, OIDD 261, OIDD 761
Prerequisites: None, but microeconomics helpful.
Activity: Lecture
1 Course Unit

BEPP 962 Applied Economics Seminar
The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented; after attending the seminar - and the ensuing discussion of the paper - students will prepare follow-up evaluations of their referee report reports, due one week after the seminar.
Taught by: Fernando Ferreira
Two terms, student may enter either term.
Also Offered As: REAL 962
Prerequisites: None.
Activity: Seminar
0.5 Course Units
BEPP 971 Market Design
The course covers Market Design, the analysis and engineering of market rules and institutions. In the last 60 years practitioners and academics have deliberately engineered the rules of an increasing number of markets, with classic examples including medical resident matching (e.g., NRMP), spectrum auctions (e.g., FCC auctions), and organ donation exchanges. In the last few years, very large markets have been created from scratch, such as eBay, Adwords, and smaller markets like odesk.com and sittercity.com. These designs use a broad set of tools, including economic theory, empirical analysis and experiments (and a fair dose of trial-and-error). With this experience, useful principles have emerged, on what market failures typically have to be addressed, and on which rules work and which do not.
Taught by: Eduardo Azevedo
Activity: Lecture
1 Course Unit

BEPP 987 Industrial Organization and Competition Policy
This course focuses on empirical methods and applications of research topics in Industrial Organization. Although not exclusively, the course will focus mostly on the application of econometric techniques used to study specific markets and antitrust policies. The topics that will be covered include the evaluation of market power and mergers, product differentiation, investment and innovation, collusion, price discrimination, vertical relations, entry and product positioning, and the dynamics of industries. The course will also discuss research methodologies related to microeconomic theory, computational methods, and econometric analysis. The applicability of the techniques goes beyond the field of Industrial Organization, and include the Labor, Health, Trade and Public economics.
One term course offered either term
Prerequisites: Doctoral level economics (e.g. ECON 701, 703 or ECON 680, 682).
Activity: Lecture
1 Course Unit

Cell and Molecular Biology (CAMB)

CAMB 422 Genomics of Human Disease and Evolution
In this course we will discuss the identification and characterization of genetic diversity in the human genome, the genetic basis of normal variable traits, and the genetic basis of human disease. The study of the human genome increasingly impacts almost every aspect of our society, from medicine to law enforcement to how we view ourselves. The focus of this course will be to apply concepts and methods of genetics and genomics analysis (gene mapping, genome sequencing, epigenetics, gene expression) to better understand the genetic basis of both normal variable traits as well as disease for Mendelian (those traits influenced by a single gene) and complex (those traits influenced by multiple genes and environment) traits. We will discuss how to distinguish the evolutionary and demographic forces (i.e. mutation, migration, selection, population size) that influence genotypic and phenotypic variation within and among human populations. We will discuss how genomics and population genetics methodologies are being applied to study modern human origins, analysis of ancient DNA, ancestry, and population history. We will also discuss the implications of these studies for personalized medicine.
An ability to understand human genetic and genomics analyses will serve you well since in your lifetime you are almost certain to be faced with a major decision involving your heredity; and society will be forced to make major reforms in medicine, business, and law because of increasing genomics data. By the end of this class you should have a better understanding of the science behind the study of the human genome.
Taught by: S. Tishkoff
Also Offered As: BIOL 422
Prerequisite: BIOL 221
Activity: Lecture
1 Course Unit

CAMB 431 Genome Sciences and Genomic Medicine
This course will be a focused study of genomes, genomic techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections.
Taught by: B. Gregory
Also Offered As: BIOL 431
Prerequisite: BIOL 221; BIOL 421 strongly recommended
Activity: Lecture
1 Course Unit
Notes: Graduate students do not need permits or prerequisites as those will have been taken in undergraduate studies
CAMB 480 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduate students with a particular enthusiasm for Cell Biology. CAMB/BIOL 480 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course that provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies. There is no assigned text; students learn to critically evaluate current literature by reading original papers on selected topics in modern cell biology. Accordingly, class participation/discussion is essential and the grade will be determined significantly by that. In addition, there will be two exams including answering short questions and an essay critiquing an original paper that is selected on a topic in Cell Biology.
Taught by: Wei Guo
Course usually offered in fall term
Also Offered As: BIOL 480
Prerequisites: College level biochemistry and cell biology
Activity: Lecture
1 Course Unit

CAMB 483 Epigenetics
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Taught by: Wagner
Course usually offered in fall term
Also Offered As: BIOL 483
Prerequisite: BIOL 221
Activity: Lecture
1 Course Unit

CAMB 485 The RNA World: A Functional and Computational Analysis
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, student presentations, and discussions will be based on readings from the primary literature.
Taught by: B. Gregory
Course usually offered in spring term
Also Offered As: BIOL 485
Prerequisites: BIOL 221 required. BIOL 421 strongly recommended.
Activity: Seminar
1 Course Unit
Notes: Graduate students will have satisfied prerequisites in their undergraduate studies

CAMB 486 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding. There is no textbook for the course. Readings from the primary literature will be assigned for each meeting and provided as pdf files. Presentations of these papers and class participation, including questions and critical evaluation, are an essential part of the course.
Grading will be based on a final paper in the form of a research proposal (50%) and on class participation (50%).
Taught by: Lampson, M.
Course usually offered in spring term
Also Offered As: BIOL 486
Prerequisites: The course section is limited to PhD students only.
Activity: Seminar
1 Course Unit

CAMB 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Taught by: Berger
Course usually offered in spring term
Also Offered As: BIOL 493
Prerequisites: BIOL 221 required, BIOL 483 recommended
Activity: Seminar
1 Course Unit
CAMB 510 Immunology for CAMB
The purpose of this course is to provide a thorough grounding in immunology to Cell and Molecular Biology graduate students, with an emphasis on the role of the immune system in combating infectious diseases. This is a required course for CAMB students in the Microbiology, Virology and Parasitology program and the Vaccine and Gene Therapy program, replacing IMMU 506 (Immune Mechanisms). It may also be used as an elective by CAMB students in other programs such as those from the Cancer Biology program and Cell Biology, Physiology and Metabolism program. The course is divided into two parts. The first deals with innate immune response with a focus on pattern recognition and subsequent signaling in infection by bacteria, viruses, and parasites. The second half will focus on adaptive immune mechanisms, the structure, function, and molecular biology of antigen receptors and major histocompatibility complex molecules, and the development, activation, and differentiation of lymphocytes and other hematopoietic cells involved in immunity. The course is comprised of two 1.5-hour lectures per week, with Friday journal club on selected weeks.
Taught by: G. Scott Worthen
Course usually offered in spring term
Prerequisite: BIOM 600 or instructor permit
Activity: Lecture
1 Course Unit
Notes: Priority given to students in the MVP GTV programs of CAMB. Second priority to CAMB students in other programs. If slots remain, then Ph.D. students from other graduate groups by permit only. Ph.D. students only.

CAMB 511 Principles of Development
This graduate course, which will include lectures and readings from the literature, is designed to provide a foundation in the principles of developmental biology. Topics covered will include: the germ line and piRNA, signaling pathways in development, pattern formation and cell specification, gastrulation, tissue differentiation, morphogenesis, cell polarity, epigenetics in development, organogenesis, stem cell biology, regeneration, and developmental evolution. The use of molecular biology, biochemistry, genomics and genetics, cell biology, and embryological manipulations will be discussed in the context of the analysis of developmental mechanisms.
Taught by: M. Mullins & P. Seale
Course usually offered in spring term
Prerequisites: Undergrad background in cell biology and molecular biology required. Non-BGS students require permission from course directors to register
Activity: Lecture
1 Course Unit

CAMB 512 Cancer Biology and Genetics
The course objective is to introduce the students to important and current concepts in Cancer Biology and Cancer Genetics. The lectures are organized into four broad thematic groups: A) Cell-Autonomous Mechanisms (e.g., tumor suppressor and oncogene function, DNA repair pathways, senescence, apoptosis); B) Non Cell-Autonomous Mechanisms (e.g., tumor microenvironment, hypoxia, angiogenesis); C) Organ Systems (e.g., pancreatic cancer, hematopoietic malignancies); and D) Therapeutic Approaches (e.g., protein kinase inhibitors, immunotherapy, radiation therapy.) The organizers, along with faculty from the School of Medicine, the Wistar Institute and CHOP, with expertise in the corresponding areas provide lectures for the course. The students are expected to present, and participate in discussions of one or more key recent papers at Journal Clubs that are held at the end of each thematic group. There will be midterm and final exams of short essays relevant to the lectures.
Taught by: K. Eisinger, T. Ridky, K. Hamilton
Two terms. student may enter either term.
Prerequisites: BIOM600 or course director permission.
Activity: Lecture
1 Course Unit
Notes: Non-CAMB students must contact the course director prior to registration. Students are not permitted to audit this course.

CAMB 518 Current Topics in Ion Channels
The course is a seminar format, specifically a journal club format, targeted to graduate students and MD/PhD students interested in ion channels. It meets for one hour, once a week for graduate students and once every other week for the entire group with formal presentation. On alternate weeks a faculty member meets with students to discuss and review the contents of each selected article for the subsequent week’s presentation. This is an elective course meant to excite and intellectually enlighten students regarding the latest advances in ion channel research. It includes a wide range of ion channel topics from basic biophysics, structure, and physiology to cell biology and clinical applications. It is attended by faculty, students, and postdocs from the departments of Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Biophysics, Psychiatry. We require a written critique of each paper presented by other participants during the semester, submitted prior to the formal presentation of the paper. This critique will be graded by a faculty member, as will the student’s participation in both the preparatory sessions and formal presentation sessions. A final grade would be based on both of these components.
Taught by: Deutsch, C.
One-term course offered either term
Prerequisites: Basic knowledge of ion channels, BIOM 600 or equivalent.
Corequisite: Prerequisite must be confirmed before student can register
Activity: Seminar
1 Course Unit

CAMB 522 Human Evolutionary Genomics
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genomics are also welcome.
Taught by: S. Tishkoff
Course offered spring; even-numbered years
Also Offered As: BIOL 522
Prerequisite: Permission of director
Activity: Seminar
1 Course Unit
CAMB 530 The Cell Cycle, Genome Integrity and Cancer
This seminar course focuses on molecular and biochemical events that regulate cell cycle progression and genome maintenance, and explores how these processes influence cancer etiology and treatment. Specific topics will familiarize students with the key principles and recent developments within these areas. These topics include CDK-Cyclins and their inhibitors, regulation of G1-S and G2-M phase cell cycle transitions, DNA damage checkpoints and repair, the impact of chromatin regulation on DNA repair, and how each of these processes affects cancer etiology and treatment. In depth reading and evaluation of research literature will be primarily used to accomplish these aims, as well as provide instruction on rigorous experimental design and data interpretation.
Taught by: Asangani, Irfan and Greenberg, Roger
Course usually offered in fall term
Prerequisites: Completion of BIOM 600, BIOM 555 and/or equivalent graduate level course work. Anyone without such course work must obtain instructor permission.
Corequisites: Preferential registration of Cancer Biology and CAMB students up to the maximum of 12 students applies. Permission to register is required upon exceeding the 12 student limit.
Activity: Seminar
1 Course Unit

CAMB 532 Human Physiology
This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue, organ, and organism levels. It will begin with a brief review of membrane physiology, followed by electrophysiology and signaling in nerve. Then, after a brief outline of neural control systems and their role in homeostasis, it will present motility and muscle, the cardiovascular system, respiration, the renal and gastrointestinal systems, and selected topics from the endocrine system, the reproductive systems, environmental and exercise physiology. As well as providing a basis of integrative physiology for students in fields such as physiology, bioengineering and pharmacology, it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization.
Taught by: Tejvir Khurana, Ben Prosse, and Paul Titchenell
Course usually offered in fall term
Also Offered As: PHRM 532
Prerequisites: Although not a formal prerequisite, a good foundation in cell biology at the level of BIOM/CAMB 600 (or an equivalent upper level undergraduate course) is strongly recommended. A general understanding of the chemistry and biochemistry of macromolecules, and of basic molecular biology will also be assumed. This course is primarily designed for 2nd year BGS students; 1st year students in BGS or other programs will require the permission of the instructor. This course is not open to undergraduates.
Corequisites: Students without BIOM 600 require the instructors permission.
Activity: Lecture
1 Course Unit

CAMB 534 Seminar on current genetic research: Modeling Human Disease in Diverse Genetic Systems
An advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of ~2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a "News & Views" style article in the journal "Disease Models and Mechanisms". Offered spring semester.
Taught by: T. Jongens
Course usually offered in spring term
Also Offered As: NGG 534
Prerequisites: CAMB 605 or CAMB 542 or permission of the instructor.
Activity: Seminar
1 Course Unit
Notes: Priority for enrollment will be given to CAMB graduate students. Class not open to Master or undergraduate students.

CAMB 542 Topics in Molecular Medicine
TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery. There are two sections for the course — 401 and 402. Section 401 is for first year MD/PhD students only and section 402 is for VMD/PhD and PhD students.
Taught by: Section 401: Johnson, Kohl Section 402: Atchison, Mason
Course usually offered in fall term
Also Offered As: PHRM 542
Activity: Seminar
1 Course Unit
Notes: Section 402: Open to combined degree and BGS students; capped at 12 students total; non-BGS students must receive permission from course instructors.

CAMB 547 Fundamental Virology
The course provides an introduction to virology aimed at graduate students in the biomedical sciences.
Taught by: Matthew Weitzman
Course usually offered in fall term
Prerequisites: Prior coursework in molecular or cellular biology. First Priority to MVP students, then CAMB students, then GCB students.
Activity: Lecture
0.5 Course Units

CAMB 548 Bacteriology
The format of this course will be two lectures and one student presentation/paper discussion per section. The course will begin by introducing molecular mechanisms in bacterial replication, then cover detailed studies of host-bacterial interactions. The course will cover the general concepts and recent advance of how bacterial pathogens prepare to infect the host, the successful strategies bacteria used to infect the host, and how they survive after the infection.
Taught by: Zhu, J.; Bushman, R.
Course usually offered in fall term
Prerequisite: none
Activity Lecture
0.5 Course Units
Notes: Priority given to MVP graduate students
CAMB 549 Parasites and Parasitism
Parasites infect over one quarter of the world’s population and parasitic diseases are a leading cause of death globally. “Parasites and Parasitism” is to be offered to first and second year MVP students over a seven-week block in the fall semester. The course will begin with an introduction to the major protozoan and helminth pathogens of humans, their geographic distribution and the diseases they cause. Subsequent lectures will emphasize a variety of topics from the current research literature using specific parasitic pathogens as examples. These will include how various protozoans enter cells and adapt to different intracellular habitats or how helminths utilize different strategies to survive within the GI tract. Malaria and schistosomiasis will serve as examples for how parasites cause disease while trypanosomiasis and leishmaniasis will be discussed as models for how parasites survive or evade immune elimination. Finally, several helminth and protozoan systems will be used to demonstrate the intimate association between parasite and vector that leads to efficient transmission. In addition to lectures, weekly discussion sessions will provide an opportunity for students to review papers or research specific topics and present their findings to their colleagues.
Taught by: Hunter, C. & Lok, J.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: Permission needed from course director for non-CAMB students

CAMB 550 Genetic Principles
This is a required course of the Genetics and Epigenetics Program and is designed to provide students with a comprehensive overview of genetic concepts and methodology. The course is organized into three parts: I Fundamental genetic concepts and tools; II Genetics of model organisms (with focus on worms, flies, zebrafish and mice); III Human genetics and disease. Each week there will be two lectures and one associated discussion/problem-solving session. Discussions emphasize practical aspects of generating and interpreting genetic data. Offered spring semester.
Taught by: Sundaram, M. & Grant, S.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Open to all PhD students in BGS, or Biology, priority given to CAMB, GCB or Biology student. Students outside of BGS or Biology or in non-PhD programs, require permission from the course director to register.

CAMB 578 Advanced Topics in Behavioral Genetics
This course focuses on the use of genetic techniques to study the molecular and cellular bases of behavior. Particular emphasis will be given to the role of genetic approaches in understanding the biological processes underlying memory storage, circadian rhythms, and neurological and psychiatric disorders. Reverse genetic approaches utilizing gene knockout and transgenic technologies, as well as forward genetic approaches using mutagenesis and quantitative genetic techniques will be discussed.
Taught by: Abel/Bucan
Course offered spring; even-numbered years
Prerequisite: Permission of Instructor
Activity: Lecture
1 Course Unit

CAMB 597 Neural Development, Regeneration and Repair
General Description: The goals of this course are to examine the principles underlying the nervous system development and to learn how understanding developmental mechanisms can inform strategies to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Fall 2017 Topics: Generation of Neuronal Diversity; Specification of Inhibitory Interneurons and Stem Cell replacement strategies; Axon Guidance at the Midline and Regeneration in the Spinal Cord; Wiring the Olfactory System; Synapse Formation; Mechanosensory Circuit Formation and Insights into Pain and Itch.
Taught by: Greg J. Bashaw and Wenqin Luo
Course usually offered in spring term
Also Offered As: NGG 597
Prerequisites: Cell 600 or equivalent. Students who are not in one of the BGS graduate programs need instructor permission
Activity: Lecture
1 Course Unit

CAMB 598 Immunology for Cancer Biologists
Themes: The contribution of both adaptive and innate immune cells to tumor progression and metastasis; Mechanisms of immune-mediated edition of tumors; Barriers to tumor immunity that contribute to tumor escape. Objective of course: To learn and analyze the major aspects of the inter-relationships between the immune system and tumors. By the end of the class students should be able to answer the question: why do current immunotherapeutic approaches for cancer fail in the majority of patients? Based on the topics covered in the course, students should be able to define research avenues that will increase the efficacy of immunotherapies for cancer.
Taught by: Sandra Ryen
Course usually offered in fall term
Prerequisites: CAMB Students only, priority given to Cancer Biology students
Activity: Lecture
1 Course Unit

CAMB 601 Advanced Virology Seminar
This seminar course covers current topics and important concepts in virology. Students will read selected papers on various topics in virology. Each subject will be illustrated by ground-breaking classic papers and innovative recent articles. Students will present a seminar under the guidance of a faculty member. Grades will be based on the guidance of a faculty member. Grades will be based on the quality of the seminar(s) and participation in discussion.
Taught by: S. Weiss, C. Lopez
Course usually offered in spring term
Prerequisite: CAMB 706 (MVP Core Course)
Activity: Seminar
1 Course Unit
Notes: Non-CAMB students must obtain instructor approval.
CAMB 605 CAMB First Year Seminar
Topics are selected by course instructors and student participants. Course instructors vary yearly. The goal of this course is to provide students with an opportunity to analyze, present, and discuss significant research papers in the field of cell and molecular biology in small group settings. The sections are taught by faculty from the different programs within the Graduate Group. This is a required course for CAMB PhD students. Other BGS students are eligible, space permitting.
Taught by: John Seykora
Course usually offered in fall term
Prerequisite: None
Activity: Seminar
1 Course Unit
Notes: Preference to CAMB students is given. Students outside of CAMB may be accepted space permitting.

CAMB 608 Regulation of Eukaryotic Gene Transcription
An advanced seminar course emphasizing current topics in gene regulatory mechanisms in eukaryotes. Based on the current literature, presentations and in depth discussions will familiarize the student with recent innovations and developing principles of genome regulation.
Taught by: S. Liebhaber, D. Epstein, & E. Joyce
Course usually offered in fall term
Prerequisites: BIOM 555 or equivalent (exception=MD/PhD students). Students are expected to bring their laptops to class. Non-CAMB students need approval from course directors.
Activity: Seminar
1 Course Unit
Notes: This course is limited to 14 participants. All interested students need permits from course directors before registering.

CAMB 609 Vaccines and Immune Therapeutics
Vaccination is perhaps the most successful medical technological intervention. The goal of this course is to expand on students' general understanding of the immune system and to focus this understanding towards the application of vaccination and immune therapies for the 21st century. Furthermore, the course will give the student a sense of how these principles are applied to vaccine and immune therapeutic development. The course covers basic science as well as the clinical, regulatory, ethical, and political issues and implications of modern vaccines and world health. Initial lectures review immune mechanisms believed to be responsible for vaccine induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism as well as vaccines for cancer. An appreciation for the application of laboratory science to the clinical development and studies of vaccines is provided in the next section of the course along with lectures, which focus on the regulatory, safety, and ethical implications of vaccines in different world situations. The financial implications of specific vaccines on global health are one focus of the course.
Taught by: David Weiner, Ph.D., Paul Offit, M.D.
Course usually offered in fall term
Also Offered As: IMUN 609
Prerequisites: Biology, biochemistry at the advanced college level, college level immunology is recommended
Activity: Lecture
1 Course Unit
Notes: Not limited to CAMB students, however first options are to CAMB students

CAMB 610 Molecular Basis of Gene Therapy and Genome Editing
This is a team-taught, survey course that focuses on the basic science relevant to achieving efficient and effective gene transfer and genome editing in animal models and humans for the treatment of disease. The course includes units devoted to a variety of vectors useful for gene transfer, the fundamentals of genome editing, and current therapeutic approaches using specific diseases as models. Prior background in biochemistry, cell biology, and molecular biology is essential. Aspects of organ system anatomy and physiology, virology, and immunology that are relevant to the course material are included in the course. Because of rapid movement in this field, specific topics vary somewhat from year to year. Offered every fall.
Taught by: Jean Bennett and Kiran Musunuru
Course usually offered in fall term
Prerequisites: Background in biochemistry, cell biology and molecular biology. Students not enrolled in a BGS graduate program who wishes to take this course must get permission in advance from Dr. Musunuru. Students should send their undergraduate and graduate transcripts (including spring semester) along with their request to Dr. Musunuru via email: kmus@pennmedicine.upenn.edu. This class is not accepting Non-BGS masters students.
Activity: Lecture
1 Course Unit

CAMB 615 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidosis. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st and 2nd year BGS graduate students. MD/PhDs and Postdoctoral fellows are welcome. Target audience is primarily 1st year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdocs are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students.
Taught by: Yair Argon; Harry Ischiropoulos
Course usually offered in fall term
Also Offered As: BMB 518, NGG 615
Prerequisite: BIOM 600 or equivalent
Activity: Lecture
1 Course Unit
Notes: Not limited to CAMB students, however first options are to CAMB students
CAMB 617 Emerging Infectious Diseases  
A physician from just 25 years ago would not recognize two of today's most pressing public health problems, AIDS and Hepatitis C, nor be familiar with many other infectious diseases or agents including MERS, Ebola virus, Hantavirus, HTLV-1, HHV-8 and Borrelia burgdorferi. Such a physician might also be dismayed to learn that old enemies such as tuberculosis, malaria, diphtheria, West Nile virus, meningococcal meningitis, Yellow fever, and Dengue have become more (or rather less) prevalent due to antibiotic resistance and other factors. In addition, bioterrorism, long a theoretical possibility, is now part of today's reality and could result in the deliberate introduction of anthrax or other biological agents into the civilian population or the food supply. Thus, with the beginning of the new millennium, the medical profession, the veterinary profession, and the biomedical research establishment are faced with the triple threat of emerging infectious diseases, reemerging infectious diseases, and bioterrorism. These topics are covered in this course, with an emphasis on student's participation in the discussion. Emerging Infectious Diseases will cover emerging viral, bacterial and parasitic organisms, with lectures being given by faculty from the Schools of Medicine, Veterinary Medicine, Dental Medicine, and Arts and Sciences, and outside lecturers. Epidemiology, immune responses to infection, vaccine and antimicrobial agents, and pathogenesis all will be discussed. The course format will include short lectures by various faculty members to provide background information on each topic, followed by extensive discussion by students. Classes will run from 10 am to 11:30 AM on Mondays and Wednesdays in Johnson 207. Evaluation will be based on presentations of a research manuscript from the literature and participation in discussion sessions.  
Taught by: S. Hensley, P. Bates  
Prerequisites: BIOM 660 (CELL 660) and CAMB 706 (MVP Core Course) are required. Course open to graduate students only. Other students may petition the course directors for permission to enroll.  
Activity: Lecture  
1 Course Unit

CAMB 630 Topics in Human Genetics and Disease  
Building on the foundations of the Human Genome and HapMap projects, as well as parallel efforts in model organisms, research in human genetics and genomics is progressing rapidly. Our understanding of basic concepts in genetics, and Mendelian and non-Mendelian human genetic disease is proceeding at an unprecedented pace. This course will provide students with an overview approaches to understanding current problems and techniques in human genetics. The format will be an advanced seminar course, with directed reading and students presentations. Every week, students are expected to participate in a 2-hour class session, and two students will present recent publications in human genetics and disease. After each session, instructors will meet with presenting students for 30 min. to provide individual feedback. Course directors will attend each class, and guests preceptor with relevant scientific expertise may also participate. Students will be assigned readings for the first half of the course, and then select their own papers for the second half of the course. Presentations will be prepared in consultation with course directors. Students must meet with instructors at least one to two weeks prior to the presentation date. In class, the student discussion leaders will: i) present background information necessary to understand the assigned paper (10-15 min.), ii) lead discussion of the paper, focusing on critical evaluation of the methods and results, and iii) talk about the future directions for this research.  
Taught by: E. Shore, M. Devoto, S. Grant  
Course offered fall; even-numbered years  
Prerequisites: CAMB graduate students having taken CAMB 550, or students in MD/PhD, veterinary, genetic counseling or nursing programs with equivalent courses. Must have directors permission to register.  
Activity: Seminar  
1 Course Unit
CAMB 632 Cell Control by Signal Transduction Pathways
This course, "Targeting the cancer cell: from mechanism to precision medicine", will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weaknesses and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for in class presentation and will also write a short "News and Views" style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer.
Taught by X. Hua, J. Field, A. Resnick, and W. Pear
Course usually offered in spring term
Also Offered As: PHRM 632
Prerequisites: BIOM 600, Molecular and Cell Biology Courses
Activity: Seminar
1 Course Unit
Notes: Priority given to PhD students. Class is limited to CAMB, PHARM, IMUN and other graduate students, including engineering. Masters will go on waiting list.

CAMB 633 Advanced Seminar in Gene Therapy
This year's Advanced Seminar in Gene Therapy will cover controversial topics in the field. It will meet on Wednesdays from 5:30 - 7:00pm.
The goal of this seminar is to provide graduate students with an understanding of the challenges, both experimentally and practical, that face the gene delivery field. At least two sessions will deal with ethical issues. With the exception of the first class meeting, each of the weekly sessions will be devoted to a group discussion of recent papers. All students are required to read the papers and submit a written critique in advance of that week's class discussion. Evaluation will be based on attendance (required), active participation, and preparation of manuscript reviews. Students will be introduced to the process of reviewing manuscripts and will be asked to provide critical reviews each week. Students will also work together to write a scientific review for submission to a peer-reviewed journal. Students who are not in CAMB need to request permission from the course director, Dr. Wilson via email (wilsonjm@penmedicine.upenn.edu) and copy Veronica Niblick (vniblick@penmedicine.upenn.edu).
Taught by: Dr. James M. Wilson.
Course offered spring; odd-numbered years
Prerequisites: Background in biochemistry, cell biology, molecular biology, and immunology.
Activity: Seminar
1 Course Unit

CAMB 637 Gene Therapy: Vectors, Immunology, and Disease
This seminar course is designed to provide students with a cohesive understanding of virology and immunology of gene therapy. Three major themes will be covered: vectors, vector immunology and gene therapy of genetic and acquired diseases. The topics to be covered are viewed as an extension of topics covered in CAMB 610 (Molecular Basis of Gene Therapy), although CAMB 610 is not an absolute prerequisite for this seminar. Each class will consist of a brief introduction by an instructor, reviewing background information related to the theme discussion. The topics are explored through discussions, led by assigned students, of seminal research articles. Students are expected to have thoroughly reviewed the assigned articles and be able to present and discuss various aspects of the papers. Regular attendance and active participation in the discussions, which focus on critical evaluation of experimental design, data presentation and interpretation, is essential. Student evaluation will be based on attendance, in-class presentation (for 50% of the letter grade), and a take-home exam (for another 50% of the grade).
Taught by: J. Riley
Course offered spring; even-numbered years
Prerequisites: Background in molecular biology, virology and immunology.
BGS Students only
Activity: Seminar
1 Course Unit
Notes: BGS Students only

CAMB 691 Advanced Topics in Cell Biology & Physiology
This course, together with its companion CAMB 692, offers an advanced, in depth analysis of selected topics in cell biology and physiology. CAMB 691 and 692 are complementary courses that focus on different aspects of cell biology; these courses are offered on an alternating basis in the spring semester. The courses can be taken in either order, but require BIOM 600 or an equivalent background in basic cell biology. CAMB 691 will focus on key issues at the forefront of research in the areas of (1) Channels and transporters, (2) Vesicular and viral trafficking, (3) Tissue mechanics, (4) Heart and muscle physiology, (5) Cytoskeletal dynamics and cell division. The course format pairs faculty presentations with student-led discussion sessions highlighting important papers from the primary literature. Students will be evaluated on their presentations, their participation in class discussions, and weekly problem sets. Offered alternately in the spring semester with CAMB 692.
Taught by: E. Grischuk, M. Marks, C. Deutsch
Course offered spring; even-numbered years
Prerequisites: BIOM 600 or a similar survey course in cell biology.
Permission needed for all non-CAMB students. Advanced undergrads must contact instructor to confirm qualifications.
Activity: Seminar
1 Course Unit
CAMB 692 Advanced Topics in Cell Biology and Physiology II: Cell Signaling and Metabolism
Cells in complex organisms are required to adapt rapidly in a changing environment. Maintaining homeostasis while performing specialized functions requires that cells respond to extracellular signals as well as fluctuations in a host of intracellular metabolites. This course will cover selected topics and general principles related to signal transduction and the control of metabolic flux in living cells. The course format will include student-led discussion sessions both providing an overview of a topic as well as focusing on important papers from the primary literature. Students will be evaluated on their presentations and participation, as well as problem sets. Offered alternately in the spring semester with CAMB 691.
Taught by: J. Bauer & R. Lee
Course offered spring; odd-numbered years
Prerequisites: BIOM 600 or a similar survey course in cell biology, or the permission of the instructor.
Activity: Seminar
1 Course Unit
Notes: We encourage participation by non-CAMB students.

CAMB 695 Scientific Writing
This 7-week course is designed to introduce students to basic scientific writing skills and is based upon the premise that clear writing, giving feedback, and receiving feedback are all essential tools for professional development. While this is not strictly a preliminary preparatory course, applying the principles of this course will help improve your preliminary writing and your scientific writing in general. Structure: An initial introductory lecture for the entire class is followed by 6 weekly small group sessions. These sessions are conducted as workshops designed to enhance student faculty engagement to improve scientific writing. During the course, participants review the principles of clear, persuasive writing, and apply these principles to writing for a scientific audience. Particular emphasis is placed on conveying the significance of your research, outlining your aims, and discussing your results. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. In order to focus on the techniques of scientific writing, in-class discussion and critiques will not address scientific methodology or interpretations of results.
Taught by: J. Katz, J. Lok
Course usually offered in spring term
Prerequisites: BIOM 600, BIOM 555 and CAMB 605
Activity: Lecture
0.5 Course Units
Notes: Preference for enrollment in CAMB 695 is given to CAMB students with highest priority given to second-year students. Students from other departments may be enrolled if space permits.

CAMB 696 Contemporary Topics in Parasitology Research
This is a paper-based seminar course. Each week a student is assigned a recent seminal paper related to parasitology research. The papers are chosen by guest faculty. Students are required to provide concise but comprehensive background and present the paper in a journal club style format. A principal aim of the course is to develop the ability to think outside of the box and to cultivate the skills necessary for developing the ability to critically appraise one's own research and that of others. The ability to present and review work will be tested.
Taught by: J. Lok and M. Povolones
Course usually offered in fall term
Prerequisites: CAMB 549-001, Parasites and Parasitism
Activity: Seminar
0.5 Course Units

CAMB 697 Biology of Stem Cells
The goal of this course is to introduce graduate students to the field of stem cell biology through lectures and reviews of important contributions from the literature. Topics include embryonic stem cells, epigenetics and reprogramming, tissue specific stem cells such as hematopoietic, neuronal and epithelial stem cells, tissue regeneration, and tissue engineering. The future potential and challenges in stem cell and regeneration biology will be discussed. Important aspects of stem cell identification and characterization utilizing multiple model systems will also be a focus. Offered Fall Semester.
Taught by: P. Gadue, P. Rompolas
Course usually offered in spring term
Prerequisites: BGS Core Courses
Activity: Seminar
1 Course Unit
Notes: Graduate students only. NO undergraduates. Students other than CAMB will need permits. CAMB students receive priority seating.

CAMB 698 Elective Tutorials in Cell and Molecular Biology
This tutorial course is designed to provide students with an in-depth knowledge of a specific topic in cell biology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their field of interest or to expand on a topic that the student found interesting in one of their basic courses. Interested students can receive help choosing a faculty mentor and proposed topic or make arrangements with faculty on their own, but all arrangements must be approved by the course director. Students taking the course will attend an initial organizational meeting during the first week of classes. Students will meet weekly (1-2 hrs) with faculty mentors to discuss the literature (typically 2-3 papers per week), and in the end will write a brief review of the literature and give an oral presentation. Students will receive advice and feedback from the course director and mentor on organizing the presentation and writing the review-style article. Grades will be determined by both the mentor and course director, based on effort and the final presentation/paper.
Taught by: Lee, Robert (Fall semester) and Wei Tong (Spring semester)
One-term course offered either term
Prerequisites: Cell 600 or an alternative senior undergraduate, graduate, or professional school course in Cell Biology
Corequisites: Interested students must contact Dr. Lee: Robert Lee, PhD, Assistant Professor of Otorhinolaryngology and Physiology, 1209 BRB, (215) 573-9766, rjl@pennmedicine.upenn.edu in the fall semester and Dr. Wei Tong tongw@email.chop.edu in the spring semester.
Activity: Seminar
1 Course Unit

CAMB 699 Lab Rotation
Two terms, student may enter either term.
Activity: Laboratory
0.5 Course Units
CAMB 700 Topics in Microbiology
This course is designed for second year students in the MVP program, and focuses on pathogen-host interactions. Students make a presentation designed for 30 minutes on a topic of their choice. The topic can be something that they are working on, or simply something that they are interested in. They are requested to provide sufficient background, discuss what is known and what is not known about the topic, and then frame two to three Specific Aims. The success of the course rests entirely upon the quality of the faculty and students involved. In past years, the class have been very interactive, with each of the 11 classes lasting about 1.5 hours. The discussions are deliberately wide-ranging, and review recent literature, techniques, and how to construct a grant. Generally, two faculty will be in attendance.
Taught by: M. Betts, J. Riley
Course usually offered in spring term
Prerequisites: Permission from instructor required. Student must have taken Immunology and 2 MVP pathogen classes.
Activity: Seminar
1 Course Unit

CAMB 701 Tumor Microenvironment
Course Content: This 15-week course is designed for second year (and up) graduate students interested in learning about the tumor microenvironment. The course will cover the cross-talk between the main players (tumor cells, stroma, vasculature and immune cells) of the local tumor microenvironment field as well as the systemic response/impact of primary tumors, disseminated tumor cells and metastases, and emphasize the connections between the basic biology of the tumor microenvironment to potential therapeutic intervention. The goals of this course are to enrich scientific culture, train for clear and concise oral presentations, improve grant-writing skills, and develop critical thinking, professional composure and discussion skills. The course will be divided into 3 broad topic areas. At the beginning of each block, faculty members will present a 1 hour didactic lecture and overview of the topic followed by questions and discussions by students. Each week’s session will be led by one or two students depending on the class size and include a didactic primary research paper including specific technical background needed for the paper, presenting the data in the paper, leading discussion on the data and conclusions drawn from the paper. Required reading (including reviews and 1-2 primary papers) related to each week’s class will be assigned for all participants in preparation for in class discussion focused on the contribution and impact of the presented paper to the field. Students will be guided in choosing the appropriate depth of background and topic area and in giving formal presentations and constructive criticism of scientific data. Additionally each student will write a specific aim for a grant using data reviewed in one of his or her presentations as "preliminary data”.
Taught by: Sandra Ryeom, Ben Stanger, and Costas Koumenis
Course usually offered in fall term
Prerequisites: First year CAMB core courses must be completed. Course is for 2nd year graduate students and beyond.
Corequisites: CB students get first priority followed by other CAMB students.
Activity: Seminar
1 Course Unit

CAMB 702 Current Biochemical Topics
Participation in the “Dr. George W. Raizis Biochemical Rounds”, a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions.
Taught by: Black, B. & Shorte, J.
Course usually offered in spring term
Also Offered As: BMB 650
Prerequisites: Course is limited to BGS graduate students and undergrads from the Vagelos Scholars Program.
Activity: Seminar
1 Course Unit

CAMB 703 The ECM, adhesion receptor signaling, and translational biomechanics
This course is geared towards first and second year graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty.
Taught by: R. Mauck, R. Wells.
Course offered spring; even-numbered years
Also Offered As: BE 640
Prerequisite: BIOM 600
Activity: Lecture
1 Course Unit

CAMB 704 Stress Responses in Metabolism and Cancer
The course meets once a week for student presentations and lectures. The first 2-3 weeks encompasses lectures on state-of-the-art metabolic labeling, metabolomics, and other related methodologies. Subsequently both "historical" and more recent papers in the field of cancer metabolism are reviewed with individual faculty experts in each chosen area. The overall goal of the course is to give students a better understanding of the abrogation of normal cellular metabolism and stress during cancer, and how these interplay with each other to create/retain a malignant state. Grades are dependent on 2 presentations per semester, class participation, and weekly answers to 2-3 questions on the assigned papers.
Taught by: C. Simon, Z. Arany, and K. Wellen
Course usually offered in fall term
Prerequisite: Must have taken first year CAMB courses
Activity: Lecture
1 Course Unit
Notes: Permission to enroll is required from course directors. Preference is given to second year CAMB students in the Cancer Biology and Cell Biology, Physiology and Metabolism programs.
CAMB 705 Advanced Topics in Bacterial-Host Interactions
This course will delve into specific topics in general area of bacterial pathogenesis and bacteria-host interactions. We will be exploring key historical and current papers on topics related to bacterial invasion of and replication within host cells, bacterial interference with host cell signaling pathways, bacterial interactions with host mucosal tissues, and the role of bacterial colonization in shaping and instructing host immune responses. Each week, a student will lead the class in the discussion of published papers on a specific topic. The format of each class will be a 10-15 minute introduction of the key background and underlying questions to be presented by the student, followed by an in-depth analysis by all members of the class of one to two articles. Students will be graded based on their introductory presentation and active participation in the paper discussions.
Taught by: Igor Brodsky and Sunny Shin
Course usually offered in spring term
Prerequisites: Strong background in cell biology, immunology and/or bacteriology fulfilled by 1st year CAMB (previous BGS) courses. Course is limited to 2nd - 3rd year graduate students or advanced undergraduates with course directors permission.
Activity: Seminar
1 Course Unit

CAMB 706 MVP Core
This is a year-long course for the incoming CAMB-MVP students and others wishing to gain a broad overview of pathogens and their interactions with hosts. The course will provide students with key fundamental knowledge of Microbiology, Virology and Parasitology. The course starts with introductory lectures on Concepts of Host-Pathogen interactions. The rest of the course is divided into sections on Bacteriology, Virology and Parasitology. Each week there are three 1 hour class slots that are either lectures on a specific topic or discussions of a relevant paper presented by students. Classes are led by faculty from across the campus and are highly interactive. Evaluation is based on mid and final take home essay topics for each of the three sections. Regular attendance and active participation in the discussions is also part of the evaluation.
Taught by: M. Weitzman and S. Shin
Two terms, student may enter either term.
Activity: Lecture
1 Course Unit
Notes: Required for all CAMB-MVP students. Non MVP students must obtain instructor permission to take this course.

CAMB 707 Cell & Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area.
Taught by: Michael Milone
Also Offered As: REG 621
Prerequisites: At least one course in immunology.
Activity: Lecture
1 Course Unit

CAMB 708 HIV Virology/Pathogenesis/Cure Seminar/Journal Club
This will be a year-long class, held every other week, that is paper-based utilizing the current literature in HIV virology, pathogenesis and cure research. The class will have a journal club format with attendance and participation open to the full Penn student & postdoc community (teach-your-peers). Enrolled students will be responsible for approximately 4-5 presentations over the duration of the course, as well as for bi-weekly paper selection in conjunction with the instructors and coordinating the presentations by other participants.
Taught by: Ronald Colman and Katharine Bar
Two terms, student may enter either term.
Prerequisites: Strong background in cell biology, immunology or virology fulfilled by 1st yr CAMB Courses
Corequisites: Course is limited to graduate students. Instructor permission required for non-CAMB graduate students.
Activity: Seminar
1 Course Unit

CAMB 709 Quantitative Imaging and Analysis for Biologists (QIAB)
In many areas of biomedical research, light microscopy plays a key role in advancing our understanding of biological processes. Images are often used only to provide general qualitative support for data obtained using other methods. How ever, the digital images acquired using modern scientific microscopes can yield so much more than pretty pictures. Accurate and quantitative analysis of image data can reveal important details invisible to other techniques; these details can, in turn, provide mechanistic insights into previously inscrutable phenomena. This course will provide an introduction to the fundamentals of modern light microscopy and image analysis. Topics include image acquisition methods, image data handling, object identification and tracking, simple modeling and macro programming, and single-molecule techniques. The goal is to provide students with the background and confidence required to pursue more advanced quantitative imaging methods as the need arises in their research. Grading: Students will be judged on active participation in class, completion of hands-on exercises during weekly recitation sessions, and a final presentation describing a "publication-quality" figure they have prepared from their own image data that applies at least one of the analysis methods covered in class.
Taught by: S. DiNardo, A. Stout
Prerequisites: Open to BGS or Biology graduate student past their qualifying exam. Enrollment capped at <20, with priority given to those with a demonstrated need.
Activity: Lecture
0.5 Course Units

CAMB 710 Drug Discovery and Devel
Course usually offered in spring term
Also Offered As: BMB 605, PHRM 605
Activity: Lecture
1 Course Unit
CAMB 711 Integrative plant and animal mechanobiology
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Modules include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class.
Taught by: Rebecca Wells
Course usually offered in fall term
Also Offered As: BE 711
Prerequisite: None
Corequisite: Undergraduates require special permission from the director
Activity: Lecture
1 Course Unit

CAMB 712 Topics in Cancer Biology
This course is an elective course for 2nd year Cancer Biology Students on a range of cancer-related topics. The course is designed to expose students to a range of topics in cancer biology, improve writing skills, train students to give clear and concise oral presentations, develop active listening and critical thinking skills as well as discussion skills. The course will also teach students about rigor and reproducibility in experimental design. The course will interface with Cancer Biology WIP talks (which are only given by 3rd year and up students) and complement journal club and prelim preparation.
Taught by: Sandra Ryeom
Two terms. student may enter either term.
Prerequisites: Completion of 1st year CAMB Courses. Course is designed for 2nd year CB students.
Activity: Seminar
1 Course Unit

CAMB 752 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1) introduce the basic principles involved in sequencing and genomics; 2) familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics; 3) teach the students how to access the information and biological materials that are being developed in genomics, and 4) examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers.
Taught by: S. Diskin
Course usually offered in spring term
Also Offered As: GCB 752
Prerequisite: GCB 531/534 Intro to Genomics or equivalent, or permission from instructor
Activity: Seminar
1 Course Unit

CAMB 899 Pre-dissertation Research
Activity: Laboratory
1 Course Unit

CAMB 995 Dissertation
Activity: Dissertation
1 Course Unit

Chemical & Biomolecular Engineering (CBE)

CBE 099 Undergraduate Research and Independent Study
An opportunity for the student to work closely with a professor in a project to develop skills and techniques in research and development. To register for this course, the student submits a one-page proposal that is approved by the professor supervising the research and submitted to the undergraduate curriculum chairman during the first week of the term.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: A maximum of 2 c.u. of CBE 099 may be applied toward the B.S.E degree requirements

CBE 150 Introduction to Biotechnology
The goal of this course is to teach you the fundamentals of biotechnology and introduce you to concepts in Chemical Engineering along the way. Concepts in Biotechnology that will be covered include, DNA, RNA, the Central Dogma, proteins, recombinant technology, RNA silencing, electrophoresis, chromatography, synthetic biology, pull down assays, PCR, hybridization, array technology, DNA machines, DNA sequencing, and forensics. Concepts in Chemical Engineering that will be covered include the mass balance, scaling laws and the Buckingham-Pi theorem, kinetics of enzyme reactions, thermodynamics of molecular binding, the Langmuir isotherm, separations via chromatography.
Course usually offered in fall term
Prerequisite: Reserved for Freshmen only
Activity: Lecture
1 Course Unit

CBE 160 Introduction to Chemical Engineering
Students will learn to read and understand a process flow sheet. There is a focus on drawing a process flow sheet, and formulating and solving the material balances for the chemical processes involving chemical reactions (some with recycle streams, some with purge streams, and some with bypass streams). Additionally, students will understand the limits of the ideal gas law, and have a working knowledge of the cubic equations of state and the concept of a compressibility factor. The class will study the basic concepts of gas-liquid phase equilibrium and apply Raoul's Law to solve phase equilibrium problems. A final objective is to design flow sheets and solve material balances for simple chemical processes using ASPEN (chemical engineering simulation program).
Course usually offered in spring term
Activity: Lecture
1 Course Unit
CBE 230 Material and Energy Balances of Chemical Processes
This course introduces the principles of material and energy balances and their applications to the analysis of single- and multiple-phase processes used in the chemical, pharmaceutical, and environmental industries. The course focuses on the conceptual understanding of properties of pure fluids, equations of state, and heat effects accompanying phase changes and chemical reactions, and problem-solving skills needed to solve a wide range of realistic, process-related problems.
Course usually offered in fall term
Prerequisite: CBE 160
Activity: Lecture
1 Course Unit

CBE 231 Thermodynamics of Fluids
Students will understand, evaluate, and apply different equations of state relating pressure, temperature, and volume for both ideal and non-ideal systems. The course will focus on calculating and applying residual properties and departure functions for thermodynamic analysis of non-ideal gases. Students will apply and describe simple models of vapor-liquid equilibrium in multi-component systems (e.g. Raoult's Law, modified Raoult's Law, Henry's Law). Additionally, the class will analyze and describe properties of non-ideal mixtures and their component species. We will also model and predict reaction equilibria (including non-ideal fluid systems), as well as solve problems related to complex phase equilibria of multi-component systems (find equilibrium compositions for non-ideal phases).
Taught by: Holleran
Course usually offered in spring term
Prerequisite: CBE 230
Activity: Lecture
1 Course Unit

CBE 297 Study Abroad
One-term course offered either term
Activity: Lecture
1 Course Unit

CBE 350 Fluid Mechanics
This course is designed for students to understand the fundamental characteristics of fluids. We will develop, starting from first principles, the basic equations for fluid statics, and use them to assess buoyancy forces and determine the pressure variations in fluids with rigid body rotation. Students will understand in detail the basic types of fluid flow line patterns (e.g. streamlines and streamtubes) and the different types of interchangeable energy forms (e.g. kinetic, potential, and pressure). It is also important to develop, starting from first principles, the formulations for inviscid and viscous flow problems. These include the discussion of a control system and system boundaries, the detailed construction of conservations equations of mass, energy, and momentum for Newtonian fluids, the derivation of the Navier-Stokes equations, and the determination of appropriate initial and boundary conditions. A final objective of the course is to solve various fluid mechanics problems using control systems, dimensional analysis, and developed equations. Such problems include, but are not limited to, the terminal velocity of a falling sphere, Stokes flow, the relation between the friction factor and the Reynolds number, and flow profiles in numerous geometries.
Taught by: Holleran
Course usually offered in fall term
Prerequisite: CBE 231
Activity: Lecture
1 Course Unit

CBE 351 Heat and Mass Transport
Course usually offered in spring term
Prerequisite: CBE 350
Activity: Lecture
1 Course Unit

CBE 353 Advanced Chemical Engineering Science
Course usually offered in fall term
Prerequisite: CBE 231
Activity: Lecture
1 Course Unit

CBE 371 Separation Processes
The design of industrial methods for separating mixtures. Distillation; liquid-liquid extraction; membranes; absorption. Computer simulations of the processes.
Course usually offered in spring term
Prerequisite: CBE 231
Activity: Lecture
1 Course Unit

CBE 375 Engineering and the Environment
The course will introduce emerging environmental issues, relevant engineering solutions, and problem-solving techniques to students. The case study approach will be used to assist students to develop and apply the fundamental engineering skills and scientific insights needed to recognize a variety of environmental problems that have profound impacts on all aspects of modern society.
Course usually offered in spring term
Prerequisite: Sophomore Standing
Activity: Lecture
1 Course Unit

CBE 400 Introduction to Product and Process Design
Introduction to product design, process synthesis, steady-state and batch process simulation, synthesis of separation trains, second-law analysis, heat integration, heat-exchanger design, equipment sizing, and capital cost estimation.
Course usually offered in fall term
Prerequisites: CBE 351, 371
Corequisite: CBE 451
Activity: Lecture
1 Course Unit

CBE 410 Chemical Engineering Laboratory
Experimental studies in heat and mass transfer, separations and chemical reactors to verify theoretical concepts and learn laboratory techniques. Methods for analyzing and presenting data. Report preparation and the presentation of an oral technical report.
Course usually offered in fall term
Prerequisites: CBE 351, 371
Activity: Laboratory
1 Course Unit
CBE 430 Polymers and Biomaterials
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in spring term
Also Offered As: CBE 510, MSE 430
Prerequisites: MSE 260 or equivalent course in Thermodynamics or Physical Chemistry (such as BE 223, CBE 231, CHEM 221, MEAM 203)
Activity: Lecture
1 Course Unit

CBE 451 Chemical Reactor Design
Course usually offered in fall term
Prerequisites: CBE 231 and CBE 351
Activity: Lecture
1 Course Unit

CBE 459 Product and Process Design Projects
Design of chemical, biochemical, and materials products and processes based on recent advances in chemical and bioengineering technology. Design group weekly meetings with faculty advisor and industrial consultants. Comprehensive design report and formal oral presentation. Heat exchanger design and profitability analysis.
Course usually offered in spring term
Prerequisite: CBE 400
Activity: Lecture
1 Course Unit

CBE 460 Chemical Process Control
Course usually offered in spring term
Prerequisite: CBE 230
Activity: Lecture
1 Course Unit

CBE 479 Biotechnology and Biochemical Engineering
An overview of biotechnology from a chemical engineering perspective: DNA, enzymes, proteins, molecular genetics, genetic engineering, cell growth kinetics, bioreactors, transport processes, protein recovery and protein separations. Group projects include a MATLAB kinetics project and a biotechnology company profile. Applications to current practices in biopharmaceuticals, biofuels, and bioremediation are discussed.
Course usually offered in fall term
Prerequisites: Junior/Senior Standing in Engineering and CBE 150 or Permission of the Instructor.
Activity: Lecture
1 Course Unit

CBE 480 Laboratory in Biotechnology and Genetic Engineering
The laboratory methods covered include molecular cloning techniques, cell transformation, DNA gel electrophoresis, ImageJ, PCR, DNA sequencing, SDS PAGE, mammalian cell culture and enzyme assays. Culture techniques for bacteria, yeast and mammalian cells are taught and practiced. The students write several individual lab reports and keep a weekly lab notebook during the semester. A group presentation and report on a proposal for a new lab experiment is the final assignment for the lab.
Course usually offered in spring term
Prerequisites: CBE 479 or Permission of the Instructor.
Activity: Laboratory
1 Course Unit

CBE 508 Probability and Statistics for Biotechnology
The course covers topics in probability theories and statistical techniques, with emphases placed on the practical problems relevant to the subject areas of biotechnology. The course provides a rigorous introduction to such topics as elements of probability, random variables and probability functions, random samples, parameter estimations, hypothesis testing, regression, analysis of variance, lifetime testing, and nonparametric tests.
Course usually offered summer term only
Activity: Lecture
1 Course Unit

CBE 510 Polymer Engineering
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in spring term
Also Offered As: CBE 430, MSE 430
Prerequisites: MSE 260 or equivalent course in Thermodynamics or Physical Chemistry (such as BE 223, CBE 231, CHEM 221, MEAM 203)
Activity: Lecture
1 Course Unit
CBE 511 Physical Chemistry of Polymers and Amphiphiles
This course deals with static and dynamic properties of two important classes of soft materials: polymers and amphiphiles. Examples of these materials include DNA, proteins, diblock copolymers, surfactants and phospholipids. The fundamental theories of these materials are critical of understanding polymer processing, nanotechnology, biomembranes and biophysics. Special emphasis will be placed on understanding the chain conformation of polymer chains, thermodynamics of polymer chains, thermodynamics of polymer solutions and melts, dynamics of polymer and statistical thermodynamic principles of self-assembly.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CBE 522 Polymer Rheology and Processing
This course focuses on applications of rheology to polymer process technologies. It includes a general review of rheological concepts, including viscoelasticity and the influence of shear rate, temperature and pressure on polymer flow properties. The course covers the elementary processing steps common in various types of polymer manufacturing operations including handling of particulate solids, melting, pressurizing and pumping, mixing and devolatilization. Specific polymer processing operations including extrusion, injection molding, compression molding, fiber spinning and wire coating are covered. Emerging polymer processing applications in microelectronics, biomedical devices and recycling are also discussed.
One term course offered either term
Prerequisites: MEAM 302 and 333 or CBE 350 and 351 or equivalent
Activity: Lecture
1 Course Unit

CBE 525 Molecular Modeling and Simulations
Students will explore current topics in thermodynamics through molecular simulations and molecular modeling. The requisite statistical mechanics will be conveyed as well as the essential simulation techniques (molecular dynamics, Monte Carlo, etc.). Various approaches for calculating experimentally measurable properties will be presented and used in student projects.
Course usually offered in fall term
Prerequisite: CBE 231 or 618 or equivalent background in physical chemistry
Activity: Lecture
1 Course Unit

CBE 535 Interfacial Phenomena.
This course provides an overview of fundamental concepts in colloid and interface science. Topics include the thermodynamics of interfaces, interfacial interactions (e.g. van der Waal’s interactions, electrostatics, steric interactions), adsorption, the hydrodynamics and stability of interfacial systems, self assembly, etc. Connections to self-assembly and directed assembly of nanomaterials and emerging topics are explored.
Prerequisites: undergraduate thermodynamics, some familiarity with concepts of transport phenomena (including fluid flow and mass transfer) and differential equations
One term course offered either term
Activity: Lecture
1 Course Unit

CBE 540 Biomolecular and Cellular Engineering
This course will introduce concepts and methods for the quantitative understanding of molecular and cellular phenomena. Topics include molecular recognition, receptor-ligand binding, viral infection, signal transduction, cell adhesion, motility, and cytoskeletal dynamics. The course requires mathematics at the level of differential equations, and some knowledge of Matlab programming. A basic knowledge of cell biology is suggested, although not required.
One term course offered either term
Also Offered As: BE 540
Activity: Lecture
1 Course Unit

CBE 541 Engineering and Biological Principles in Cancer
This course provides an integrative framework and provides a quantitative foundation for understanding molecular and cellular mechanisms in cancer. The topics are divided into three classes: (1) the biological basis of cancer; (2) cancer systems biology; and (3) multiscale cancer modeling. Emphasis is placed on quantitative models and paradigms and on integrating bioengineering principles with cancer biology.
Course usually offered in spring term
Also Offered As: BE 541
Prerequisite: Senior standing or permission of the instructor
Activity: Lecture
1 Course Unit

CBE 543 Sust Dev/Water Res Sys
The evaluation of technical, social and economic constraints on the design of water supply and sanitation projects. The focus on sustainable design emphasizes how technical solutions fit within the appropriate social context. Case studies are used to demonstrate these principles across a range of examples from developed and developing countries including detailed studies from rural communities with limited resources.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CBE 544 Computational Science of Energy and Chemical Transformations
Our theoretical and computational capabilities have reached a point where we can do predictions of materials on the computer. This course will introduce students to fundamental concepts and techniques of atomic scale computational modeling. The material will cover electronic structure theory and chemical kinetics. Several well-chosen applications in energy and chemical transformations including study and prediction of properties of chemical systems (heterogeneous, molecular, and biological catalysts) and physical properties of materials will be considered.
This course will have modules that will include hands-on computer lab experience and teach the student how to perform electronic structure calculations of energetics which form the basis for the development of a kinetic model for a particular problem, which will be part of a project at the end of the course.
One term course offered either term
Prerequisites: Thermodynamics, Kinetics, Physical Chemistry, Quantum Mechanics. Undergraduate students should consult and be given permission by the instructor.
Activity: Lecture
1 Course Unit
CBE 545 Electrochemical Energy Conversion and Storage.
Fuel cells, electrolysis cells, and batteries are all electrochemical devices for the interconversion between chemical and electrical energy. These devices have inherently high efficiencies and are playing increasingly important roles in both large and small scale electrical power generation, transportation (e.g. hybrid and electric vehicles), and energy storage (e.g. production of H2 via electrolysis). This course will cover the basic electrochemistry and materials science that is needed in order to understand the operation of these devices, their principles of operation, and how they are used in modern applications.
One term course offered either term
Prerequisites: Introductory chemistry and an undergraduate course in thermodynamics (e.g. CBE 231, MEAM 203)
Activity: Lecture
1 Course Unit

CBE 546 Fundamentals of Industrial Catalytic Processes
A survey of heterogeneous catalysis as applied to some of the most important industrial processes. The tools used to synthesize and characterize practical catalysts will be discussed, along with the industrial processes that use them.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CBE 554 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Course usually offered in spring term
Also Offered As: BE 554
Activity: Lecture
1 Course Unit

CBE 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and 'polymers' - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (e.g. fluorescence down to nano-scale, AFM), physical methods (e.g. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology.
Taught by: Discher
Course usually offered in fall term
Also Offered As: BE 555, MEAM 555
Prerequisites: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor.
Activity: Lecture
1 Course Unit

CBE 557 Stem Cells, Proteomics and Drug Delivery - Soft Matter Fundamentals
Lectures on modern topics and methods in cell and molecular biology and biomedicine from the perspective of soft matter science and engineering. Discussions and homeworks will cover soft matter related tools and concepts used to 1) isolate, grow, and physically characterize stem cells, 2) quantify biomolecular profiles, 3) deliver drugs to these cells and other sites such as tumors with cancer stem cells) will be discussed. Skills in analytical and professiona presentations, papers and laboratory work will be developed.
Course usually offered in spring term
Prerequisites: Background in Biology, Physics, Chemistry or Engineering
Activity: Lecture
1 Course Unit

CBE 559 Multiscale Modeling of Biological Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (Å, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling.
Course not offered every year
Also Offered As: BE 559
Prerequisites: Undergraduate courses in numeral analysis and statistical mechanics.
Activity: Lecture
1 Course Unit
CBE 562 Drug Discovery and Development
Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS); Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menten Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FP SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization.
Course usually offered in fall term
Also Offered As: BE 562
Activity: Lecture
1 Course Unit

CBE 564 Drug Delivery
The topics include drug transport, distribution and interactions in the body, specific challenges for biotherapeutics, pharmacokinetics, drug delivery systems and nanocarriers, gene delivery systems, targeted drug delivery, and translational aspects of new drug delivery systems. Faculty from engineering and medicine will give lectures related to their research interests. The students read current journal articles on drug delivery systems. The major group assignment for the course is a written and oral group proposal on a new drug delivery system.
One term course offered either term
Also Offered As: PHRM 564
Activity: Lecture
1 Course Unit

CBE 580 Masters Biotech Lab.
The laboratory methods covered include molecular cloning techniques, cell transformation, DNA gel electrophoresis, ImageJ, PCR, DNA sequencing, SDS-PAGE, mammalian cell culture, and enzyme assays. Culture techniques for bacteria, yeast and animal cells are taught and practiced. The students write several individual lab reports and keep a lab notebook during the semester. A group presentation and report on a proposal for a new lab experiment is the final assignment for the lab.
One term course offered either term
Activity: Lecture
1 Course Unit
Notes: Reserved for students in the Master of Biotechnology Program. Not open to SEAS undergraduates.

CBE 597 Master’s Thesis Research
One term course offered either term
Activity, Masters Thesis
1 Course Unit

CBE 599 Master’s Indep Study
One term course offered either term
Activity, Independent Study
1 Course Unit

CBE 602 Statistical Mechanics of Liquids
The course will focus on advanced concepts and methods in statistical mechanics with a particular emphasis on the liquid state, e.g. aqueous solutions, capillarity, polymers, colloids, glasses, amphiphilic self-assembly, etc. Principles of both equilibrium and non-equilibrium statistical mechanics will be discussed and connections to experimentally measurable quantities will be made wherever possible.
One term course offered either term
Prerequisites: Graduate level course in statistical mechanics (e.g. CBE 618, MEE 575, BE 619, BMB 604, PHYS 581, CHEM 521). An advanced statistical mechanics course (e.g., PHYS 611, CHEM 522) is recommended, but not required.
Activity: Lecture
1 Course Unit

CBE 617 Control of Nonlinear Systems
PID control of nonlinear systems; steady-state, periodic and chaotic attractors. Multiple input, multiple-output systems; decoupling methods and decentralized control structures. Digital control, z-transforms, implicit model control, impact of uncertainties. Constrained optimization; quadratic dynamic matrix control. Nonlinear predictive control. Transformations for input/output linearized controllers.
Course usually offered in fall term
Also Offered As: ESE 617, MEAM 613
Activity: Lecture
1 Course Unit

CBE 618 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory.
Course usually offered in fall term
Also Offered As: BE 662, MEAM 662
Activity: Lecture
1 Course Unit

CBE 621 Advanced Chemical Kinetics and Reactor Design
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CBE 640 Transport Processes I
This course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows. Examples from mechanical, chemical, and biological systems will be used to illustrate fundamental concepts and mathematical methods.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
CBE 641 Transport Processes II (Nanoscale Transport)
A continuation of CBE 640, with additional emphasis on heat and mass transport. This course aims to teach transport concepts and methods useful in many current CBE laboratory settings. The emphasis will be on microscopic dynamics and transport in both hard and soft systems (e.g. colloids and polymers), of relevance to a variety of biological and biomolecular systems. Wherever possible, will make connections between classical, macroscopic transport, and what is happening microscopically. Will make use of a combination of analytic and algorithmic/numerical methods to facilitate understanding of the material. Physical topics will include stochastic, "single-molecule", non-ideal, hard sphere and frustrated systems, phase transitions, non-equilibrium statistical mechanics and optics. Concepts will include properties of stochastic functions (Gaussian statistics, correlation functions and power spectra), Fourier methods, Convolution, the Central Limit theorem, anomalous diffusion, percolation, and the Fluctuation/ Dissipation theorem. Computational methods will concentrate on Monte Carlo simulations of "toy" models.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CBE 700 Special Topics
Lectures on current research problems or applications in chemical engineering. Recent topics have included heat transfer, polymer science, statistical mechanics, and heterogeneous catalysis.
Course not offered every year
Activity: Lecture
1 Course Unit

CBE 899 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

CBE 990 Masters Thesis
For Master's students who have completed the course requirements for the Master's degree and are strictly working to complete the Master's Thesis leading to the completion of a Master's degree. Permission Required.
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

CBE 995 Dissertation
One-term course offered either term
Activity: Dissertation
1 Course Unit

CBE 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Chemistry (CHEM)

CHEM 010 Academic Based Community Service-Chemistry Outreach
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CHEM 012 Environmental Chemistry
The course aims to teach chemical content and principles in the context of significant environmental issues. Topics to be covered include: composition of the atmosphere; protecting the ozone layer; chemistry of global warming; traditional hydrocarbon fuels and energy utilization; water supply, its contaminants, and waste water treatment; acid rain; nuclear energy; and new energy sources. Students will develop critical thinking ability, competence to better assess risks and benefits, and skills that will lead them to be able to make informed decisions about technology-based matters.
For BA Students: Physical World Sector
One term course offered either term
Activity: Lecture
1 Course Unit
Notes: The course requires math literacy at the high school algebra level (2 years) and a willingness to learn Excel. Students must also have taken one year of high school chemistry.

CHEM 022 Structural Biology
This course will explain in non-mathematical terms how essentially all biological properties are determined by the microscopic chemical properties of proteins. It will also explain how research results, especially those of structural biology, are presented to its various audiences.
For BA Students: Natural Science and Math Sector
One term course offered either term
Activity: Seminar
0.5 Course Units
Notes: Freshman Seminar

CHEM 025 Freshman Seminar: From Alchemy to Nanoscience
The imperative to transform matter finds its roots in alchemy and the search for the Philosopher's Stone, which was thought to contain the secret of turning base metals into gold and also the secret of immortality. We will examine the evolution of the way in which people have thought about matter and its transformations; from the manufacturing of explosives to dyestuffs to pharmaceuticals and perfumes. We will do some simple experiments that demonstrate some of these principles. We will follow the development of the chemical sciences from the works of early alchemists to Renaissance (Newton and Boyle) scientists and modern thinkers (Priestly, Lavoisier, Dalton, Mendeleev and others). This class, which is designed for non-science as well as potential science majors, will involve discussions on readings, as well as field trips to some Philadelphia locations that are notable in the history of chemistry.
Taught by: Jeffrey Winkler
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CHEM 053 General Chemistry Laboratory I
A general laboratory course covering aspects of qualitative and quantitative analysis, determination of chemical and physical properties, and chemical synthesis.
One term course offered either term
Activity: Laboratory
0.5 Course Units
Notes: Lab fee $150.

CHEM 054 General Chemistry Laboratory II
Continuation of CHEM 053.
One term course offered either term
Activity: Laboratory
0.5 Course Units
Notes: Lab fee $150.
CHEM 100 Introduction to General Chemistry
This course is equivalent to Chemistry 101 but is intended for students with less preparation in high school chemistry and mathematics, and moves more methodically through the introductory chapters. The course covers most of the same topics as Chem101 and is designed to provide students with the skills needed to succeed in Chem102. In Chem100 there is a strong emphasis on problem-solving that is fundamental to all physical science. Topics will include: introduction to fundamental chemical ideas and their application to chemical reactions, stoichiometry and ideal gases. Also provided is an overview of the periodic table and classical ideas of chemical bonding using Lewis structures. Quantum theory will be introduced - focusing on its role in understanding atomic structure, the periodic table, and chemical bonding. Topics from mathematics and physics that are necessary to chemical problem-solving will be included as needed.
For BA Students: Physical World Sector
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CHEM 101 General Chemistry I
Basic concepts and principles of chemistry and their applications in chemistry and closely-related fields. The first term emphasizes the understanding of chemical reactions through atomic and molecular structure. This is a university level course, treating the material in sufficient depth so that students can solve chemical problems and can understand the principles involved in their solution. It includes an introduction to condensed matter. This course is suitable for majors or non-majors and is recommended to satisfy either major or preprofessional requirements for general chemistry. This course is present for students with high school chemistry and calculus. Students with a lesser background than this should take Chemistry 001.
For BA Students: Physical World Sector
One-term course offered either term
Activity: Lecture
1 Course Unit

CHEM 102 General Chemistry II
Continuation of Chemistry 101. The second term stresses the thermodynamic approach to chemical reactions, electrochemical processes, and reaction rates and mechanisms. It includes special topics in chemistry.
For BA Students: Physical World Sector
One-term course offered either term
Prerequisite: CHEM 101
Activity: Lecture
1 Course Unit

CHEM 115 Honors Chemistry I
This course will focus on introducing students to the following topics: the nature of the chemical bond (forces, potentials, and quantum mechanics), covalent and non-covalent interactions, properties of gasses, liquids, and solids. Students in section 001 will be introduced to modern computational chemistry methods and section 002 introduces students to modern experimental techniques.
For BA Students: Physical World Sector
Course usually offered in fall term
Prerequisites: AP Chemistry exam score of 5.
Corequisites: MATH 114 or higher.
Activity: Lecture
1 Course Unit
Notes: Freshman only.

CHEM 116 Honors Chemistry II
An advanced course for students who have had very strong background in Chemistry in High School (AP, IB, or equivalent). Advanced material from the general chemistry curriculum will be covered in the context topics selected from current research areas. A continuation of CHEM 114/115, CHEM 116 will focus on topics in biochemistry and biophysical chemistry relating to thermodynamics, equilibrium, kinetics, and electrochemistry.
For BA Students: Physical World Sector
Course usually offered in spring term
Prerequisites: Advanced High School Chemistry (AP or equivalent).
Activity: Lecture
1 Course Unit

CHEM 221 Physical Chemistry I
Introductory quantum mechanics, atomic and molecular structure, chemical bonding, and microscopic understanding of physical and chemical properties of molecules.
Course usually offered in fall term
Prerequisites: CHEM 102, MATH 114, PHYS 150
Activity: Lecture
1 Course Unit

CHEM 222 Physical Chemistry II
Continuation of CHEM 221. Principles and applications of thermodynamics, and a molecular-based understanding of macroscopic properties.
Course usually offered in spring term
Prerequisites: CHEM 221, PHYS 151
Activity: Lecture
1 Course Unit

CHEM 223 Experimental Physical Chemistry I
Important methods, skills, and apparatus used for the acquisition and interpretation of quantitative information about chemical systems will be discussed in principle and used in the laboratory.
Course usually offered in spring term
Prerequisite: CHEM 221
Activity: Laboratory
1 Course Unit
Notes: Lab fee $300.

CHEM 241 Principles of Organic Chemistry
Fundamental course in organic chemistry based upon the modern concepts of structure and mechanism of reactions.
One-term course offered either term
Prerequisite: CHEM 102
Activity: Lecture
1 Course Unit

CHEM 242 Principles of Organic Chemistry II
Continuation of CHEM 241.
One-term course offered either term
Prerequisite: CHEM 241
Activity: Lecture
1 Course Unit
CHEM 243 Organic Chemistry II: Principles of Organic Chemistry with applications in Chemical Biology

This course is functionally equivalent to Chem 242 as the second term of introductory Organic Chemistry, placing the content in the context of biology and medicine. Topics include: 1) alkyl compounds, ethers, epoxides and sulfides in lipids; 2) carboxylic acids and amines in amino acids; 3) aromatic compounds and heterocycles in nucleic acids; and 4) ketones and aldehydes in carbohydrates. The synthesis and mechanism of action of pharmaceuticals that feature these functional groups will also be discussed. Additionally, Chem 243 makes use of 3D structure tutorials, recitation sections and visits from biomedical scientists who make use of chemistry in their work.

Taught by: Dr. David Chenoweth & Dr. E. James Petersson
Course usually offered in spring term
Prerequisite: CHEM 241
Activity: Lecture
1 Course Unit

CHEM 245 Experimental Organic Chemistry

A basic laboratory course in which both the theoretical and practical aspects of a variety of organic reactions and multistep syntheses are emphasized. Modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. Course should be taken concurrently with CHEM 242 (or 243) or in the semester immediately following. PLEASE NOTE THE FOLLOWING: For the Summer and LPS offering of CHEM 245, it is a 2-semester course. Part 1 is taken in the first term for 0.0 CU and then Part 2 is taken in the second term immediately following the first for 1.0 CU.

One-term course offered either term
Prerequisite: CHEM 241
Corequisite: CHEM 242 or 243
Activity: Laboratory
1 Course Unit
Notes: Lab fee $300.

CHEM 246 Advanced Synthesis and Spectroscopy Laboratory

Advanced laboratory work on the synthesis, structure, and properties of organic and inorganic compounds. Infrared, ultraviolet, and nuclear magnetic resonance spectroscopy. Lectures cover the theoretical basis and applications of modern spectroscopic methods.

Course usually offered in fall term
Prerequisites: CHEM 242 or 243 and 245
Corequisite: CHEM 261 should be taken concurrently or previously completed successfully
Activity: Laboratory
1 Course Unit
Notes: Lab fee $300.

CHEM 251 Principles of Biological Chemistry

Fundamentals of biological chemistry, including the structure of biological macromolecules and their mechanism of action, intermediary metabolism, and the chemical basis of information transfer. Course can be taken concurrently with CHEM 242 or CHEM 243.

One-term course offered either term
Prerequisites: CHEM 102 and 241
Corequisites: CHEM 242 or 243.
Activity: Lecture
1 Course Unit

CHEM 261 Inorganic Chemistry I

An introductory survey of the bonding, structure, and reactions of important metal and nonmetal compounds.

Course usually offered in fall term
Prerequisites: CHEM 241 and 242 or 243.
Activity: Lecture
1 Course Unit

CHEM 299 Directed Study and Seminar

Independent project under the direction of a faculty member conducting chemistry research.

One-term course offered either term
Prerequisites: Permission of undergraduate chairman.
Activity: Independent Study
1 Course Unit

CHEM 399 Independent Research

Independent project under the direction of a faculty member conducting chemistry research.

One-term course offered either term
Prerequisites: Permission of undergraduate chairman; a B average in Chemistry, Mathematics, and Physics.
Activity: Independent Study
1 Course Unit

CHEM 441 Organic Reaction Mechanisms

Study of important types of reactions and functional groups, with emphasis on synthetic usefulness, mechanisms, and stereoelectronic principles.

Course usually offered in fall term
Prerequisite: CHEM 242
Activity: Lecture
1 Course Unit

CHEM 443 Modern Organic Synthesis

Introduction to advanced organic synthesis. Study of important synthetic reactions including: oxidations, reductions, and methods for the formation of carbon-carbon bonds, with an emphasis in chemoselectivity, stereoselectivity and asymmetric synthesis. Survey of modern methods for the synthesis of small, medium and large ring systems. Analysis of modern synthetic strategies, with illustrative examples from total synthesis of natural and unnatural products.

Course usually offered in fall term
Prerequisites: CHEM 241 and 242 or 243
Activity: Lecture
1 Course Unit

CHEM 451 Biological Chemistry I

Structure, dynamics, and function of biological macromolecules. Properties of macromolecular assemblies, membranes and their compartments. (Formerly, CHEM 450-I).

Course usually offered in fall term
Prerequisites: CHEM 242 or 243, 221 (may be concurrent), and 251 or permission of instructor
Activity: Lecture
1 Course Unit

CHEM 452 Biological Chemistry II

Physical and chemical description of macromolecular information transfer. Gene organization, replication, recombination, regulation and expression. (Formerly, CHEM 450-II).

Course usually offered in spring term
Prerequisites: CHEM 242 or 243, 221, and 251 or permission of instructor
Activity: Lecture
1 Course Unit
CHEM 462 Inorganic Chemistry II
A detailed treatment of the theory and application of modern physical methods for the elucidation of structure and mechanism in inorganic and organometallic chemistry. An introduction to symmetry and group theory is followed by the application of these concepts to vibrational and electronic spectroscopy of inorganic complexes. Magnetic resonance is discussed in detail, including topics such as EPR, fourier transform methods, dynamic systems, and 2-dimensional NMR.
One-term course offered either term
Prerequisites: CHEM 261 or its equivalent and permission of instructor
Activity: Lecture
1 Course Unit

CHEM 495 High Throughput Discovery: A Multidisciplinary Approach to Cancer.
The newly developed massively parallel technologies have enabled the simultaneous analysis of many pathways. There are several large scale international efforts to probe the genetics and drug sensitivity of cancer cell lines. However, there are some rare cancers that have not been analyzed in depth. One of these rare cancers is malignant peripheral nerve sheet tumors (MPNST). MPNST, although a rare cancer, are common in patients with neurofibromatosis type. In the course, students will take part in a high throughput discovery effort in two phases. Phase 1 is a training phase, which will consist of quantitative profiling the sensitivity of MPNST cell lines to a library of >120 common and experimental cancer drugs. These will be conducted in the UPENN High Throughput Screening Core. (http://www.med.upenn.edu/cores/High-ThroughputScreeningCore.shtml). While we call this a training phase, the data from this will be subject to rigorous quality control for eventual publication and development of a public database for rare tumors. Phase 2 is an independent research project. Examples of projects include, but are not limited to: Combinatorial screens (synthetic lethal); siRNA screens; novel compound screens; determining mechanisms of cell death; developing tools for data analysis and database development. During phase 2, students will also modify compounds of interest using the Penn Chemistry: Upenn/Merck High Throughput Experimentation Laboratory (https://www.chem.upenn.edu/content/penn-chemistry-upenmerck-high-throughput-experimentation-labortory), and then retest them for activity to determine structure activity relationships. We will sponsor phase 2 projects relevant to neurofibromatosis. However, in phase two students can also research other areas if they develop sponsorships from professors. We expect the course to be a hypothesis engine that generates ideas for further research. Prerequisites include a strong foundation in biology and chemistry. Students will prepare an abstract proposal by week three on their phase 2 project, and a report, in scientific paper style, due on the last day of the semester.
Taught by: Dr's Jeffrey Field, David Schultz, and Simon Berritt
Course usually offered in spring term
Also Offered As: PHRM 495
Activity: Laboratory
1 Course Unit

CHEM 521 Statistical Mechanics I
Principles of statistical mechanics with applications to systems of chemical interest.
Course usually offered in fall term
Prerequisite: CHEM 222
Activity: Lecture
1 Course Unit

CHEM 522 Statistical Mechanics II
A continuation of CHEM 521. The course will emphasize the statistical mechanical description of systems in condensed phases.
Course usually offered in spring term
Prerequisite: CHEM 521
Activity: Lecture
1 Course Unit

CHEM 523 Quantum Chemistry I
The principles of quantum theory and applications to atomic systems.
Course usually offered in fall term
Prerequisite: CHEM 222
Activity: Lecture
1 Course Unit

CHEM 524 Quantum Chemistry II
Approximate methods in quantum theory and applications to molecular systems.
Course usually offered in spring term
Prerequisite: CHEM 523
Activity: Lecture
0.5 Course Units

CHEM 525 Molecular Spectroscopy
This course is broken into two sections: (1) optics, and (2) theory of spectroscopy including the discussion of techniques and examples. In the first section you will be introduced to both linear and nonlinear optics, through thinking about how to design optical components in the laboratory setting, the second part of the course is a more traditional spectroscopy course, where different spectroscopies in the visible and infrared spectral region will be discussed. This part of the course will focus on understanding what we can learn from using spectroscopy and what sort of dynamical processes can be observed with different spectroscopic techniques. Topics to be covered include, but are not limited to: optics, time-dependent perturbation theory, lineshapes, density matrix, group theory, selection rules.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 526 Chemical Dynamics
Theoretical and experimental aspects of important rate processes in chemistry.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CHEM 541 Physical Organic Chemistry
Undergraduate organic chemistry is a prerequisite. Overview of the principles governing organic bonding, structure, and properties. Quantum calculations as well as laboratory thermodynamic and kinetic measurements used in understanding organic chemical reactions will be surveyed. Mechanisms will be discussed but will not be covered in detail. As such, registration in Chem 441 (Mechanisms) or the completion of it's equivalent is strongly recommended (see instructor).
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CHEM 551 Methods for in vivo biochemical discovery
One-term course offered either term
Activity: Lecture
0.5 Course Units
CHEM 555 Macromolecular Crystallography: Methods and Applications
The course is broken up into three parts: (1) Principles of macromolecular X-ray crystallography (2) Workshop on macromolecular structure determination (3) Student presentations on X-ray crystal structures from the recent literature.
Course usually offered in fall term
Also Offered As: BMB 554
Activity: Lecture
1 Course Unit

CHEM 557 Mechanisms of Biological Catalysis
Reaction mechanisms in biological (enzymes, abzymes, ribozymes) and biomimetic systems with emphasis on principles of catalysis, role of coenzymes, kinetics, and allosteric control.
One-term course offered either term
Prerequisites: One year of organic chemistry and a biochemistry course, or permission of instructor
Activity: Lecture
1 Course Unit

CHEM 558 Biomolecular Spectroscopy and Microscopy
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 564 Organometallics
This course is focused on molecular species that contain metal-carbon bonds, and the role of these compounds in catalytic processes and organic synthesis. Aspects of the synthesis, structure and reactivity of important classes of organometallic compounds such as metallo alkyl, alyl, alkyne, allylidene and alkylidyne complexes are surveyed for the d and f block metals. Emphasis is placed on general patterns of reactivity and recurring themes for reaction mechanisms.
One-term course offered either term
Activity: Lecture
1 Course Unit

CHEM 555 Main Group Chemistry
This course encompasses a comprehensive survey of the chemistry and properties of the p-block elements of the periodic table. Topics include syntheses, structures and reactivities of important compounds. In addition, alternative bonding theories which have been used to explain the unique properties of these compounds are critically examined.
One-term course offered either term
Activity: Lecture
1 Course Unit

CHEM 567 Bio-inorganic Chemistry
The course covers selected topics in bioinorganic chemistry; special emphasis is placed on dioxynogen chemistry and electron transfer processes. Course topics include: (i) oxygen uptake and utilization; (ii) diatomic oxygen transport; (iii) diatomic and monoatomic oxygen incorporation into substrates; (iv) metalloenzyme-catalyzed C-C bond formation; (v) the metallobiochemistry of DNA; (vi) metal-sulfide proteins; (vii) manganese-containing metalloproteins; (viii) Photosystem II: light-driven electron transfer and the biological water-splitting reaction; (ix) biological electron transfer; (x) electron transfer theories; (xi) mechanisms of energy storage and release; and (xii) long-distance electron transfer reactions.
One-term course offered either term
Also Offered As: BMB 567
Activity: Lecture
1 Course Unit

CHEM 601 Chemical Information
This course examines the structure and organization of the chemical literature and introduces techniques of searching this literature, focusing on the logic and thought processes necessary for effective information retrieval. Each technique is illustrated using information tools available at the University of Pennsylvania, and we take an "under the hood" look at the organization and functionality of each tool introduced. Students should choose a course section based on their preferred area of chemistry research: organic, inorganic, biological, and physical chemistry; all four sections are taught at a level appropriate for graduate students and advanced undergraduates. Topics vary by section, but all students learn the basics of subject, author, structure, and reaction searching, and a unit on ethics in publication and scholarly communication completes the course.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 652 Proposal Writing for Biological and Physical Chemists
Students will learn the key components in proposal writing and develop the skills needed to prepare a compelling and original graduate research proposal. The course involves significant writing, in-class discussions and presentations.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

CHEM 662 Proposal Writing for Inorganic and Organic Chemists
The ability to communicate original, written research proposals is essential to the modern chemist. This course, for graduate students in the organic and inorganic divisions, will promote development of proposal writing skills. Students will develop original ideas, practice written work, graphic design and peer review. Outcomes of the course will include writing (and submission, when eligible) of an NSF GRFP application and a 'proposed work' section of a candidacy exam report.
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

CHEM 721 Mathematics for Chemistry
This course examines the basic mathematics needed for physical chemistry, including (but not limited to) a brief review of linear algebra, Fourier transforms, delta functions, optimization, and the residue theorem. Depending on the year, selected other topics will also be included.
One-term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 723 Dynamics of Polymers
This course discussed the structure of polymers from a statistical physics point of view as well as dynamical response of polymeric systems such as mechanical response of polymer melts, polymer glass transition, properties of polymers in solutions, and properties of block co-polymers and ionomers.
One-term course offered either term
Activity: Lecture
0.5 Course Units
CHEM 741 Spectroscopy
The course will provide a continuation of material covered in Chemistry 441 and Chemistry 541, as well as spectroscopy of organic compounds focused mainly on NMR. Topics will include advanced organic mechanisms, electronic structure calculations of organic molecules related to their structure, reactivity, and spectroscopic properties, and Organic Spectroscopic methods for the determination of structure using NMR.
One term course offered either term
Prerequisites: CHEM 441 and CHEM 541
Activity: Lecture
1 Course Unit

CHEM 742 Medicinal Chemistry and Drug Design
This course focuses on concepts and strategies in medicinal chemistry, and how it is applied to modern drug discovery and development. Topics include the drug discovery process, drug targets (GRCRhs, enzymes, channels etc.), physical chemistry of molecular interactions between drug and target, drug design, methods for hit and lead identification, lead optimization, chemical biology, natural products chemistry and combinatorial and diversity oriented synthesis. This course is geared to upper level undergraduate students in chemistry or biochemistry, and first year chemistry graduate students. A strong understanding of organic chemistry is required.
Taught by: Donna Huryn
One term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 743 Heterocyclic Chemistry
The course deals with topics in Heterocyclic Chemistry. It covers nitrogen-containing monocyclic hetero rings, examining the most recent syntheses, the reactions and their mechanisms. The course will focus on recent variations and improvements of known heterocycles as well as their synthetic utility. Students will be expected to read critically a recent article on heterocyclic chemistry and do a presentation to the class.
Taught by: M. Jouille
One term course offered either term
Activity: Lecture
0.5 Course Units

This class will discuss selected topics related to Bioinspired synthesis, methods, tactics and strategies. Target molecules, methods and strategies are designed by using biological systems as models.
Taught by: Virgil Percec
One term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 745 Total Synthesis
The focus of this course comprise the development of two synthetic strategies to access architecturally complex natural products of biological significance exploiting innovative chemistry. Lectures towards this end are given. As a project, each student is given a different complex natural product and expected at the end of the course to develop two strategies, one based on asymmetric induction to provide the absolute stereochemical structure, the second where the absolute stereochemistry derives from commercially available starting materials.
Taught by: Amos B. Smith III
One term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 746 Intermediate Organic Chemistry
This course will include a review of basic reaction mechanisms, stereoelectronic effects, functional groups and acid-base chemistry. The course will emphasize the writing of mechanisms using the curved-arrow notation and organic reactions. Bonding and electronic structure theories and more involved mechanisms will be discussed. Students are expected to have a good working knowledge of reactions, functional groups, stereochemistry and mechanisms from undergraduate organic chemistry. Students will be expected to review basic concepts in Organic Chemistry and spectroscopy. The course will include lectures and recitations, and students are expected to attend and participate.
One term course offered either term
Activity: Lecture
1 Course Unit
Notes: MCS and PhD students only.

CHEM 751 Chemical Biology
This course focuses on current topics in Chemical Biology, particularly experiments in which 1) chemical synthesis enables one to probe or control biological systems, or 2) manipulation of biological systems facilitates novel chemical syntheses. The course is broadly divided into two sections, one dealing with the study of individual proteins and nucleic acids, and one dealing with complex cellular systems. As the goal of the course is to familiarize students with innovative recent experimental approaches and to stimulate them to conceive of their own new methodology, students will be responsible for delivering presentations on topics selected from the literature, designing experiments to address currently unsolved problems in Chemical Biology (in take-home examinations), and generating several novel research proposal ideas, one of which will be elaborated into a full proposal.
Taught by: EJ Peterson
One term course offered either term
Also Offered As: BMB 751
Activity: Lecture
1 Course Unit

CHEM 751 Coordination Chemistry
Ligands have a remarkable ability to alter the properties of metal ions, and the study of this coordination chemistry underlies many modern advances in science, including energy harvesting and storage, chemical catalysis, and sustainability. This course explores the relationships between the identities of ligands and the physical manifestations that result from their binding to metal centers. Topics to be covered include: symmetry and chirality in molecular complexes, variations in coordination number, ligand field effects, recent advances in bonding theory, and inorganic reaction mechanisms.
Taught by: Neil Tomson
One term course offered either term
Activity: Lecture
0.5 Course Units

CHEM 762 X-ray I
An introduction to the theory and practice of structure determination by X-ray crystallography. Topics discussed include point group and space group symmetry, structure factor theory, data collection methods and a survey of solution methods. The course culminates with a series of real-world structure determinations worked through in-class using the XSeed program package.
Taught by: PCarroll
One term course offered either term
Activity: Lecture
0.5 Course Units
Chinese (CHIN)

CHIN 001 First Year Spoken Chinese I
This course is designed for students who have little or no previous exposure to Chinese. The main objective of the course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. Chinese characters will not be taught.
For BA Students: Language Course Taught by: Dietrich
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.

CHIN 002 First Year Spoken Chinese II
A continuation of CHIN001. This course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. To achieve this goal, the class is to be conducted in Chinese as much as possible. Chinese characters will also be introduced, but will not be the focus of the class.
For BA Students: Language Course Taught by: Dietrich
Course usually offered in spring term
Prerequisites: CHIN001 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.

CHIN 003 Second Year Spoken Chinese I
This course is designed for students who have completed one year of college level Chinese classes or equivalent. The main objective of the course is to improve students' conversational ability in Chinese. By the end of the second semester, students will reach the survival level, namely, they can accomplish the basic day to day tasks encountered by visitors as well as the local people. These tasks include relating one's personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking for directions, making travel plans, visiting a doctor, attending a social function and so forth. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese character will not be taught.
For BA Students: Language Course Taught by: Dietrich
Course usually offered in fall term
Prerequisites: CHIN002 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.
CHIN 004 2nd Year Spoken Chinese II
This course is the continuation of CHIN003. The primary goal of the course is to improve students' conversational ability in Chinese. By the end of the semester, students will reach the survival level, namely, they can accomplish the basic day to day tasks encountered by visitors as well as the local people. These tasks include relating one's personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking directions, making travel plans, visiting a doctor, attending a social function and so forth. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese character will not be taught.
Taught by: Dietrich
Course usually offered in spring term
Prerequisites: CHIN003 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: See LPS Course Guide. ** This course fulfills LPS language requirement only. It does not fulfill the language requirement for other colleges.

CHIN 011 Beginning Modern Chinese I
Along with CHIN012, CHIN111 and CHIN112, this is the first course of a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The sequence starts each fall. Students cannot begin their study in the spring. This course is designed primarily for students who have little or no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions. This course is designed primarily for students who have little or no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions. In order to achieve these goals, students are expected to thoroughly preview and review the materials according to the weekly lesson plan (on course website) prior to attending class. Regular attendance is mandatory and strictly monitored.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CHIN 012 Beginning Modern Chinese II
This course is the continuation of CHIN 011. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the second semester, students will be able to manage many situations that have immediate concern to them, such as relating one's personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions.
For BA Students: Language Course
Taught by: Dietrich
Course usually offered in spring term
Prerequisites: CHIN011 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Along with CHIN011, CHIN111 and CHIN112, this is the second course in a four-semester sequence. By completing all four semesters, students fulfill the College language requirement.

CHIN 021 Intensive Beginning Modern Chinese I & II
This is a two-semester course covering the same material as CHIN011, CHIN012, CHIN111 and CHIN112. The main objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing Chinese. By the end of this course and CHIN022, students should achieve the following goals: 1) pronounce all the sounds in Mandarin Chinese accurately and comfortably with a good command of the 4 tones; 2) carry out basic conversations in daily activities; 3) recognize and reproduce approximately 600–650 characters; and 4) read edited simple stories and write short notes or letters. Grammatical and cultural related issues are discussed during lecture hours. Oral communication tasks are given every week.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
2 Course Units
Notes: Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.

CHIN 022 Intensive Beginning Modern Chinese III & IV
Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level. The language practiced in CHIN 022 will be more formal and written style than that of CHIN 021, including more authentic materials reading, listening and viewing.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisites: CHIN021 or permission of the instructor.
Activity: Lecture
2 Course Units
Notes: Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level.
**CHIN 031 Beginning Reading and Writing in Chinese I (for Fluent Speakers)**
The course is designed for students who can speak Chinese but cannot read and write in Chinese characters. The major purpose of this course is to help students develop the ability to use written Mandarin Chinese in linguistically and socially appropriate ways. The literacy goal is to master 350 to 1000 Chinese characters for the beginning phase (CHIN 031); to reach an intermediate-low level of ACTFL literacy proficiency. The key teaching approach is to holistically read a prodigious amount of materials. Students' reading abilities will be developed through reading short stories, and eventually through reading long stories and news independently.

For BA Students: Language Course
Taught by: Wu
Course usually offered in fall term
Prerequisites: Restricted to students who can speak Chinese but cannot read or write the language.
Activity: Lecture
1 Course Unit

**CHIN 032 Beginning Reading and Writing in Chinese II (for Fluent Speakers)**
CHIN 032 is designed for students who can speak Chinese and have reading ability of about 1000 Chinese characters. This Chinese reading and writing course is specifically designed for students at the ACTFL intermediate-low reading and writing level. The literacy goal is to master 1000 to 2000 Chinese words and reach the intermediate mid proficiency level. Reading material covers topics that are meaningful to students not only to increase engagement and confidence in their Chinese reading skills, but also foster students' apprehension and understanding of the Chinese deep culture.

For BA Students: Last Language Course
Taught by: Wu
Course usually offered in fall term
Prerequisites: CHIN 031 or permission of the instructor.
Activity: Lecture
1 Course Unit

**CHIN 041 Beginning Cantonese I**
Beginning Cantonese is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. The course will be completed in two semesters.

Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center. This course does not fulfill the College of Arts Sciences' language requirement.

**CHIN 042 Beginning Cantonese II**
Beginning Cantonese is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. The course will be completed in two semesters.

Course usually offered in spring term
Prerequisites: CHIN041 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

**CHIN 051 Beginning Taiwanese I**
Beginning Taiwanese CHIN 051 is designed to help students learn enough daily use Taiwanese to enable students to handle the needs when one travels to Taiwan. At this beginning level, learners will learn to greet others, introduce yourself and handle basic social situations. You will also require the understanding of oral language typically heard in location such as grocery store, train station, and bus stop, restaurant and night market.

Taught by: Wu
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

**CHIN 052 Beginning Taiwanese II**
Beginning Taiwanese II is a continuation of CHIN 051. This course will cover language training as well as cultural topics including history and political aspects of Taiwan. Conversation topics range from daily conversation to professional and formal situations.

For BA Students: Language Course
Taught by: Wu
Course usually offered in spring term
Prerequisites: CHIN 051 or permission of the instructor.
Activity: Lecture
1 Course Unit

**CHIN 081 Beginning Business Chinese I**
The course is designed for juniors and seniors, and Penn working professionals who have no prior exposure to Chinese, and are interested in learning basic Chinese language and culture for the preparation of a business trip to China. The objective of this course is to build an understanding of Chinese culture, a main focus on speaking and listening and minimal reading. Upon completion, students are expected to be able to converse and interact with people in a variety of traveling settings and in company visits. Topics in the course units include meeting people, talking about family, introducing companies, making inquiries and appointments, visiting company, introducing products, initiating dining invitations and practicing dining etiquette.

For BA Students: Language Course
Course not offered every year
Prerequisites: This course does not fulfill the language requirement in the College. First meeting mandatory.
Activity: Lecture
1 Course Unit
CHIN 082 Online Beg Bus Chin II
As a continuation of CHIN081, this course is to help students develop their listening and speaking skills as well as understanding of Chinese social development since 1976. The emphasis is on current China business development, correct pronunciation, accurate tones and mastery of basic grammatical structures.
Course usually offered in spring term
Prerequisite: CHIN 081
Activity: Lecture
0 Course Units

CHIN 111 Beginning Chinese III (Non-Intensive)
Along with CHIN011, CHIN012 and CHIN112, this is the third course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills–listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 450-500 characters; and 4) read short textbook stories and write simple notes. In order to develop students' listening and speaking ability, oral communication tasks are given on each lesson.
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: Completion of CHIN012 or the equivalent or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 112 Beginning Chinese IV
Along with CHIN011, CHIN012 and CHIN111, this is the fourth course in a four-semester sequence. The objective of the course is to continue building a solid foundation of the four basic skills–listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 600-650 characters; and 4) read short textbook stories and write simple notes. In order to develop students' listening and speaking ability, oral communication tasks are given every other week.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisite: CHIN 111
Activity: Lecture
1 Course Unit

CHIN 142 Intermediate Cantonese I
Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students' own dialogues so that in time they may express more complex ideas and feelings. The course will be completed in two semesters.
Course usually offered in spring term
Prerequisite: CHIN 141
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

CHIN 151 Intermediate Taiwanese I
In Chin 151, the students will be able to communicate with ease and confidence when dealing with everyday routine tasks. Students will also gain skills to process and seek information in Taiwanese. Conversation topics include New Year, folk songs, and Tang poetry. Authentic materials are used for enhancing reading, listening, and speaking practices.
Taught by: Wu
Course usually offered in fall term
Prerequisite: CHIN052
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

CHIN 152 Intermediate Taiwanese II
Course usually offered in spring term
Prerequisite: CHIN 151
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.

CHIN 211 Intermediate Modern Chinese I
This is an intermediate language course. It aims to develop students' overall linguistic skills in listening, speaking, reading, and writing Chinese. The specially designed textbook gives introduction to various topics on Chinese culture. Students can expect to gain knowledge about China while they are learning the language. By completion of the course, students are expected to be able to master 1200 most frequently used characters in common reading materials, and to communicate with Chinese on
Taught by: Lee
Course usually offered in fall term
Prerequisites: CHIN112 or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center.
CHIN 212 Intermediate Modern Chinese II
This course is the continuation of CHIN 211. It aims to further develop students' overall language skills. The textbook will introduce various topics related to Chinese culture, society, economy, people, and their everyday life as well as China's development since Deng Xiaoping's reform and opening-up policies in 1978. In class, current issues in China will be integrated to provide a new perspective for discussion. The emphasis is not only to consolidate students' foundation, but also enhance their understanding and distinguish different levels of language. Over the semester, students will have many opportunities to express and share their opinions on various topics related to China via communicative activities, presentations, and written assignments.
Taught by: Lee
Course usually offered in spring term
Prerequisites: CHIN 211 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 231 Intermediate Reading and Writing Chinese I (for Fluent Speakers)
CHIN 231 is an intermediate reading and writing course designed for students at the ACTFL intermediate-mid reading and writing proficiency. The goal of this course is to reach the intermediate-high level of proficiency. This course concentrates on writing of multi-paragraph essays through the use of conventional rhetorical modes and standard grammatical structures. Students will be given ample time to think and to discuss (the crucial "brainstorming" phase) before writing. The course stresses content, culture and comparison and draws its content from assigned readings and evidence-based argument from texts and other stimuli such as Internet, newspapers and films.
Taught by: Wu
Course usually offered in fall term
Prerequisites: CHIN 032 or the equivalent or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Restricted to fluent speakers who have only limited reading and writing abilities.

CHIN 232 Intermediate Reading and Writing Chinese II (for Fluent Speakers)
This is an intermediate language class presuming basic fluency in speaking and listening and focusing on reading and writing abilities. By the end of the semester students are expected to have mastered the 1200 most commonly used characters and to have the ability to read basic Chinese texts. Students will be prepared for Advanced Modern Chinese, Media Chinese and Business Chinese.
Taught by: Wu
Course usually offered in spring term
Prerequisites: CHIN 231 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 311 Advanced Modern Chinese I
Students learn to work on materials which were written or produced for native speakers, instead of the classroom materials that were written for the non-native speakers. The reading materials include a larger vocabulary with more idioms. Students will also learn how to understand and use certain oral expressions in conversation. They will learn ways to narrate, to describe, and to comment in native Chinese ways. Reading and audio materials are provided and discussed in the classes. Writing and oral presentations in Chinese are required in classroom under instruction. Students will be encouraged to practice oral communication with each other.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisites: CHIN 212 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 312 Advanced Modern Chinese II
CHIN 312 is a continuation of Chinese 311, training speaking, listening, reading and writing skills so to reach the advanced-low or advanced-mid level of proficiency. Major topics of the course include Chinese food culture, Chinese architecture, Confucianism in modern China, "educated youth", democracy, and cross-Taiwan Strait relations.
For BA Students: Advanced Language Course
Taught by: Jiao
Course usually offered in spring term
Prerequisites: CHIN 311 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 331 CHINESE SHORT STORIES
Designed for students with advanced level Chinese language training but who need some further refinements on pronunciation, grammar, and vocabulary usage, this course stresses oral discussion, composition, and accuracy of language performance. By reading texts written by contemporary writers, students will also gain knowledge of China from an analytical and comparative perspective.
Taught by: Chiang
One-term course offered either term
Prerequisites: CHIN 312 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 361 Media Chinese
CHIN 361 will help students improving their language skills, and enlarge vocabulary through reading online news on Chinese internet. The students will learn formal vocabulary and enhance their grammatical accuracy in the semester. Students are encouraged to explore Chinese government and company websites and Baidu Baike, so to conduct their own online search for both professional and academic purposes. Linguistic features in news headlines, accuracy of online translation tools, media censorship, social media usage will also be discussed in this class. The course goal is to help students gain Chinese media literacy by reading, browsing, and viewing online materials.
Taught by: Chiang
One-term course offered either term
Prerequisites: Completion of CHIN 232, 311, 331 or permission of the instructor.
Activity: Lecture
1 Course Unit
CHIN 371 Advanced Spoken Mandarin I
This course is designed for students who have completed at least the intermediate level Chinese language course, or have studied the language for at least three years. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, including the current issues in China about its education, society, politics, culture, and history. Students will also learn how to gather information necessary for conducting oral presentations and speeches.
For BA Students: Advanced Language Course
Taught by: Lee
Course usually offered in fall term
Prerequisites: CHIN 212 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 372 Advanced Spoken Mandarin II
Following the format of Advanced Spoken Mandarin I with more discussions on current issues in both China and the US, including topics ranging from race, religion, gender issues to internet, cinema and pop cultures. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, and to gather information necessary for conducting oral presentations and speeches.
For BA Students: Advanced Language Course
Taught by: Lee
Course usually offered in spring term
Prerequisites: CHIN 212 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 381 Business Chinese I
This course is aimed to enhance students’ language skills in a business context and to promote their understanding about business environment and culture in contemporary China. The text is developed from real business cases from real multinational companies that have successfully embarked on the Chinese market. The forms of classes include lectures, drills on vocabulary and sentence patterns, and discussions. Class will be conducted in Chinese. In addition to the course textbook, students will learn to read business news in Chinese selected from Wall Street Journal.
For BA Students: Advanced Language Course
Taught by: Wang
Course usually offered in fall term
Prerequisites: CHIN 232, 312 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 382 Business Chinese II
This course is the second half of a one-year course for business oriented subjects. This course will provide an overview of China’s changing macro-environment, while real business cases let us look into individual Chinese companies and their development in the new millennium. By the end of the semester, students are expected to 1) enhance the cultural awareness of contemporary China and the Chinese business world; 2) gain vocabulary and fluency in Chinese to function more confidently and comfortably in real business settings; 3) access business news and information in Chinese; 4) give business presentation in Chinese.
For BA Students: Advanced Language Course
Taught by: Wang
Course usually offered in spring term
Prerequisites: CHIN 312, 361, 381 or permission from the instructor.
Activity: Lecture
1 Course Unit

CHIN 411 Readings in Modern Chinese: Literature
This course is designed for students who have completed three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate students’ acquisition of formal or written language; and 3) to develop students’ analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.
Taught by: Dietrich
Course usually offered in fall term
Prerequisites: CHIN 331, 361, 382 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 412 Readings Modern Chinese II: Literature
The main difference between this course and CHIN 411 is the reading materials and topics. This course is designed for students who have completed a minimum of three years of college level Mandarin classes or equivalent. This course may be used to fulfill language or elective requirement for Chinese major or minor. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of Chinese people, Chinese society and Chinese culture; 2) to facilitate students acquisition of formal or written language; and 3) to develop students’ analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.
Taught by: Dietrich
Course usually offered in spring term
Prerequisites: CHIN 331, 361, 382 or permission of the instructor.
Activity: Lecture
1 Course Unit
CHIN 415 Readings Modern Chinese Documents
The main purpose of this content-based course is to promote advance-level language proficiency in reading, writing, speaking and listening. Through the use of modern Chinese documents, the secondary purpose of this course is to facilitate your understanding of the changes of Chinese society in the 20th century. Topics will include the Constitution of China, China’s legal system, speeches by Mao Zedong, Deng Xiaoping, Sun Yet-sun and Qiu Jin. Taught by: Chiang
Course not offered every year
Prerequisites: CHIN 361, 381, 411 or permission of the instructor
Activity: Lecture
1 Course Unit

CHIN 481 Advanced Business Chinese I
This content-based course provides students with the conceptual framework to understand issues China has been facing since its economic reform in 1978. Topics include WTO principles, the change of China’s state-owned enterprises, China’s economy in Mao's period, and the pros and cons of globalization. Students will be trained in reading financial articles, discussing international trades, conducting online research and giving business presentations. After the course, students will become more sophisticated in their understanding of China’s economic development and in using Chinese business terminology at professional settings. The course assumes basic background in business and advanced level proficiency in Chinese language. The course is NOT open to freshmen with no undergraduate business course. For BA Students: Advanced Language Course
Taught by: Chiang
Course usually offered in fall term
Prerequisites: CHIN 382 or equivalent or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: May be offered through Penn Language Center.

CHIN 482 Advanced Business Chinese II
Chin 482 is a continuation of Chin 481. Following the format of Chin 481, Advanced Business Chinese I, this course covers topics on Eastern and Western management styles, the global financial market, China’s financial market reforms, and mergers and acquisitions in China. At the end of the semester, students will submit a business proposal for the final project. For BA Students: Advanced Language Course
Taught by: Chiang
Course usually offered in spring term
Prerequisites: CHIN 481 or permission of the instructor.
Activity: Lecture
1 Course Unit

CHIN 491 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 221, EALC 621
Activity: Lecture
1 Course Unit

CHIN 492 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: EALC 222, EALC 622
Prerequisite: CHIN491
Activity: Lecture

CHIN 510 Topics in Chinese Culture
The objective of this superior level content-based course is to extend and refine students' language and analytical skills while enhancing the appreciation of Chinese culture. The course is for students with native-like competence in Mandarin. Each class will proceed from reading, reflection, and interpretation, to the exchange of ideas. All reading materials are in Chinese with no glossary and all are written by scholars whose expertise are with in contemporary and traditional culture of China, or in comparative study of Chinese and Western thoughts. Topics include: (1) the shared beliefs and behaviors of Chinese people; (2) traditional values and new values in the technological and business society; (3) how affection and love are manifested in Chinese culture; (4) what influenced the surge of popularity of Chinese wuxia fiction; (5) what it meant to be descendants of Chinese (huayu) living outside China. The class is conducted exclusively in Mandarin Chinese.
Taught by: Chiang
Course usually offered in spring term
Prerequisites: CHIN 411, 481 or permission of the instructor
Activity: Lecture
1 Course Unit

CHIN 515 Topics in Chinese Literature
This course surveys the literary movements of the post-Cultural Revolution era (1978-present). The reading consists of fictional works representative of each literary movement. Students will write four short (1-2 pages, double space) “responding” papers and two longer critical essays (5-7 pages double spaced). Each student will also give one oral presentation to the class on an assigned story. This course is designed for students who have achieved native or near native level of reading and writing proficiency in Chinese. The course is conducted exclusively in Chinese.
Taught by: Dietrich
Course not offered every year

CIMS 036 The Middle East through Many Lenses
This freshman seminar introduces the contemporary Middle East by drawing upon cutting-edge studies written from a variety of disciplinary perspectives. These include history, political science, and anthropology, as well as studies of mass media, sexuality, religion, urban life, and the environment. We will spend the first few weeks of the semester surveying major trends in modern Middle Eastern history. We will spend subsequent weeks intensively discussing assigned readings along with documentary films that we will watch in class. The semester will leave students with both a foundation in Middle Eastern studies and a sense of current directions in the field.

CIMS 039 Perspectives on International Cinema (Cannes Film Festival)
Penn-in-Cannes is designed for students interested in the film industry and international cinema. Using the Cannes Film Festival as its focal point, the program examines the ways in which international film functions in the context of celebrity, marketing, and festivals. The scope and substance of the festival provide a unique opportunity, not only for students of cinema, but also for liberal arts students studying cultural diversity and international relations. In preparation for fieldwork at the Cannes Film Festival in May, two three-hour introductory lectures will be held in late March and April on Penn’s campus to enable students to establish a critical vocabulary for film study. The lectures and subsequent discussions will examine: a) The Business and Art of the Film Festival; b) Contemporary International Cinema. Those introductory lectures will be coordinated with the Philadelphia Film Festival, which is held on April 5-18, 2007. During both the Philadelphia Film Festival and the Cannes Film Festival, students attend screenings of current international films, applying the critical tools and knowledge of the film industry gained from their earlier work. Students research and critique both the artistic aspects and the commercial p

CIMS 070 Film Sound: History, Aesthetics & Subversion
Sound and Image as experienced in the cinema are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio s gradual and triumphant march towards fidelity, stereo and surround sound. This course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.

CIMS 101 World Film History to 1945
This course surveys the history of world film from cinema’s precursors to 1945. We will develop methods for analyzing film while examining the growth of film as an art, an industry, a technology, and a political instrument. Topics include the emergence of film technology and early film audiences, the rise of narrative film and birth of Hollywood, national film industries and movements, African-American independent film, the emergence of the genre film (the western, film noir, and romantic comedies), ethnographic and documentary film, animated films, censorship, the MPAA and Hays Code, and the introduction of sound. We will conclude with the transformation of several film industries into propaganda tools during World War II (including the Nazi, Soviet, and US film industries). In addition to contemporary theories that investigate the development of cinema and visual culture during the first half of the 20th century, we will read key texts that contributed to the emergence of film theory. There are no prerequisites. Students are required to attend screenings or watch films on their own.

CIMs 102 World Film History, 1945-present
Focusing on movies made after 1945, this course allows students to learn and to sharpen methods, terminologies, and tools needed for the critical analysis of film. Beginning with the cinematic revolution signaled by the Italian Neo-Realism (of Rossellini and De Sica), we will follow the evolution of postwar cinema through the French New Wave (of Godard, Resnais, and Varda), American movies of the 1950s and 1960s (including the New Hollywood cinema of Coppola and Scorsese), and the various other new wave movements of the 1960s, 1970s and 1980s (such as the New German Cinema). We will then selectively examine some of the most important films of the last two decades, including those of U.S. independent film movement and movies from Iran, China, and elsewhere in an expanding global cinema culture. There will be precise attention paid to formal and stylistic techniques in editing, mise-en-scene, and sound, as well as to the narrative, non-narrative, and generic organizations of film. At the same time, those formal features will be closely linked to historical and cultural distinctions and changes, ranging from the Paramount Decision of 1948 to the digital convergences that are defining screen culture today. There are no prerequisites. Requirements will include readings in film history and film analysis, an analytical essay, a research paper, a final exam, and active participation.

CIMs 103 Television and New Media
How and when do media become digital? What does digitization afford and what is lost as television and cinema become digitized? As lots of things around us turn digital, have we started telling stories, sharing experiences, and replaying memories differently? What has happened to television and life after New Media? How have television audiences been transformed by algorithmic cultures of Netflix and Hulu? How have (social) media transformed socialities as ephemeral snaps and swiped intimacies become part of the "new" digital/phone cultures? This is an introductory survey course and we discuss a wide variety of media technologies and phenomena that include: cloud computing, Internet of Things, trolls, distribution platforms, optical fiber cables, surveillance, social media, and race in cyberspace. We also examine emerging mobile phone cultures in the Global South and the environmental impact of digitization. Course activities include Tumblr blog posts and Instagram curations. The final project could take the form of either a critical essay (of 2000 words) or a media project.

CIMs 112 Study of a Theme
This topic course explores multiple and different aspects of Cinema Studies. Specific course topics vary from year to year. See the Cinema Studies website at cinemastudies.sas.upenn.edu/courses for a description of the current offerings.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: COML 245, ENGL 102, GSWS 102
Activity: Lecture
1 Course Unit

CIMs 116 Screenwriting Workshop
This is a workshop-style course for those who have thought they had a terrific idea for a movie but didn’t know where to begin. The class will focus on learning the basic tenets of classical dramatic structure and how this (ideally) will serve as the backbone for the screenplay of the aforementioned terrific idea. Each student should, by the end of the semester, have at least thirty pages of a screenplay completed. Classic and not-so-classic screenplays will be required reading for every class, and students will also become acquainted with how the business of selling and producing one's screenplay actually happens. Students will be admitted on the basis of an application by email briefly describing their interest in the course to the instructor.
Taught by: Cathy DeMarco Van Cleve
One-term course offered either term
Also Offered As: ENGL 116
Activity: Seminar
1 Course Unit

CIMs 118 Iranian Cinema: Gender, Politics, Religion
This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rakhshan Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Ghobadi, among others.
Taught by: Entezari
Course not offered every year
Also Offered As: COML 120, GSWS 118, NELC 118, NELC 618
Activity: Seminar
1 Course Unit
CIMS 125 Adultery Novel
The object of this course is to analyze narratives of adultery from Shakespeare to the present and to develop a vocabulary for thinking critically about the literary conventions and social values that inform them. Many of the themes of desire, transgression, suspicion, and discovery at the heart of these stories also lie at the core of modern narratives. Is there anything special, we will ask, about the case of adultery—once called “a crime which contains within itself all others”? What might these stories teach us about the way we read in general? By supplementing classic literary accounts by Shakespeare, Pushkin, Flaubert, Chekhov, and Proust with films and with critical analyses, we will analyze the possibilities and limitations of the different genres and forms under discussion, including novels, films, short stories, and theatre. What can these forms show us (or not show us) about desire, gender, family, and social obligation? Through supplementary readings and class discussions, we will apply a range of critical approaches to place these narratives of adultery in a social and literary context, including formal analyses of narrative and style, feminist criticism, Marxist and sociological analyses of the family, and psychoanalytic understandings of desire and family life.

CIMS 151 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

CIMS 164 Russian Film 1900-1945
This course presents the Russian contribution to world cinema before WWII - nationalization of the film industry in post-revolutionary Russia, the creation of institutions of higher education in filmmaking, film theory, experimentation with the cinematic language, and the social and political reflex of cinema. Major themes and issues include: the invention of montage, Kuleshov effect, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social-engineering, cinematic response to the emergence of the totalitarian state. Great filmmaker and theorist in discussion include Vertov, Kuleshov, Eisenstein, Pudovkin, Medvedkin and others.
Taught by: Todorov
Course not offered every year

CIMS 165 Russian and East European Film after World War II
This course examines the Russian and East European contribution to world cinema after WWII - Stalinist aesthetics and desalinization, WWII in film, the installation of totalitarianism in Eastern Europe and the Cold War in film, the fall of the Berlin Wall, the collapse of the Soviet Union and the post-soviet condition, cinematic representations of Yugoslavia’s violent breakup; the new Romanian wave. Major filmmakers in discussion include Kalatozov, Tarkovsky, Wajda, Polanski, Forman, Mentzel, Sabo, Kusturitsa, Konchalovsky, Mikhalov and others.
Taught by: Todorov
Course not offered every year
Also Offered As: EUR 165, RUSS 165
Activity: Lecture
1 Course Unit

CIMS 166 Arab-Israeli Conflict Through Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like unending crisis?
Taught by: Trout-Powell
One-term course offered either term
Also Offered As: HIST 166, NELC 137
Activity: Recitation

CIMS 206 Italian History on Screen
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy’s rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

CIMS 262 Documentary Media and Ecological Advocacy
Students will learn the history of ecology in media and create works that inform the public about ecological policy questions, considering different institutions that must be navigated along the way. Information sources to funding, production, and reception. We'll consider the grant proposals to fund a documentary film and placing op-eds in magazines and newspapers and experiments in online media. We will consider works such as Pare Lorentz's 1938 film The River to Silent Spring and Al Gore's various endeavors. We will talk with filmmakers such as Josh Fox, director of Gasland. We will take a specific issue, such as plastic waste, and look at examples of advocacy across different media platforms, from photography showing the carcasses of albatross chicks with stomachs burst full of plastic scraps to documentaries about the plastic zone in the Pacific—analyzing the rhetorical strategies and aesthetic and practical effects of different approaches.
Taught by: Zuzga J.

Activity: Seminar
1 Course Unit

CIMS 285 Art and Business of Film
The course will explore how a screenplay is conceptualized and developed, the role of agency relationships in the film business, and casting as wide a net as possible - the financing, production, direction, distribution, exhibition and marketing of both independent and studio films. A combination of lectures by instructors and practitioners, case studies, film screenings, and consulting projects with independent and Hollywood creators, packagers, financiers, exhibitors, distributors and publicists will illustrate the relationship between the art of film and the business of film. Guests will include screenwriters, agents, producers, directors, distributors, film festival curators and film critics. In short, we will try to cover all aspects of making a film, and explore that often-tricky intersection of art and commerce.
Taught by: DeMarco & Van Cleve
One-term course offered either term
Activity: Seminar
1 Course Unit

CIMS 289 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
Course usually offered in spring term
Also Offered As: FNAR 289
Prerequisite: FNAR 264
Activity: Studio
1 Course Unit

CIMS 293 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We will also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

Activity: Seminar
1 Course Unit
CIMS 305 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as "cinema" to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be no screenings for this course. No knowledge of film theory is presumed. Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class midterm; 1 take-home final.

CIMS 370 Blacks in American Film and Television
An examination and analysis of the changing images and achievements of African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith's "renegade back" in The Birth of a Nation (1915); to the comic servants played by Steppin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-WWII African heroes and heroines of Pinky (1949) and The Defiant Ones (1958); to the rise of the new movement of African American directors such as Spike Lee (Do the Right Thing), Julie Dash (Daughters of the Dust), Charles Burnett, (To Sleep With Anger) and John Singleton (Boyz N the Hood). The second half explores television images from the early sitcoms "Amos 'n Andy" and "Belial" to the "Cosby Show," "Fresh Prince of Bel Air," and "Martin.
Foremost this course will examine Black stereotypes in American films and television—indeed the manner in which these stereotypes have reflected national attitudes and outlooks during various historical periods. This course will also explore the unique "personal statements" and the sometimes controversial "star personas" of such screen artists as Sidney Poitier, Dorothy Dandridge, Paul Robeson, Richard Pryor, Oscar Micheaux, Spike Lee, Bill Cosby, Eddie Murphy and Whoopi Goldberg. The in-class screenings and discussions will include such films as Show Boat (1936), the independently produced "race movies" of the 1930s and 1940s, Cabin in the Sky (1943), The Defiant Ones (1958), Imitation of Life (the 1959 remake), Super Fly (1972), and She's Gotta Have It (1986) and such television series as "I Spy," "Julia," "Good Times," "The Jeffersons," "Roots," "A Different World," "I'll Fly Away," "LA Law," and "Hangin' With Mr. Cooper.

CIMS 382 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics, etc.).

Course not offered every year Also Offered As: COML 576, ITAL 584 Activity: Seminar 1 Course Unit

CIMS 590 Topics in Cinema & Media
This topic course explores multiple and different aspects of Cinema and Media. Specific course topics vary from year to year. See the Cinema Studies website at <http://cinemastudies.sas.upenn.edu/> for a description of the current offerings. Course not offered every year Also Offered As: ARTH 593, COML 599, ENGL 593, GSWS 594 Activity: Seminar 1 Course Unit

CIMS 592 20th Century Lit & Theory
Course not offered every year Also Offered As: COML 592, ENGL 592 Activity: Seminar 1 Course Unit

CIMS 595 Copyright and Culture
This graduate topic course explores aspects of copyright in Cinema Studies. Specific course topics vary from year to year. See the Cinema Studies website at <http://cinemastudies.sas.upenn.edu/> for a description of the current offerings. Taught by: Dechemey Course not offered every year Also Offered As: ENGL 595 Activity: Seminar 1 Course Unit

CIMS 596 Topics in Contemporary Art
Topic varies. An experimental class for artists and scholars. Organized around a series of case studies of artists, collectives, infrastructures, and curatorial projects, the course includes: in-class discussion and viewing; workshops with class visitors; site visits; participation in small reading groups. In the first half of the class, students will complete some short assignments. In addition, students will complete a final project that is intentionally open in terms of form. The project, which can be collective or individual in nature, will enable an in-depth material investigation of one of the threads of the class. One term course offered either term Also Offered As: ARTH 596, ENGL 596, FNAR 605, GSWS 596 Activity: Seminar 1 Course Unit

CIMS 599 Independent Study
One term course offered either term Activity: Independent Study 1 Course Unit

CIMS 612 Film Noir
Course not offered every year Also Offered As: FREN 612 Activity: Seminar 1 Course Unit

CIMS 682 Topics: Lit and Film
Course not offered every year Also Offered As: COML 680, GSWS 682, ITAL 682 Activity: Seminar 1 Course Unit

CIMS 694 Mexican Cinema
This seminar will address the specificity and uniqueness of Spanish America's cultural production, that is, those elements that make the Spanish American case differ from the paradigmatic postcolonial situation, and which make recent developments in postcolonial studies not fully applicable to it. We will explore these issues in the context of the literary production of the twentieth century in Spanish America from roughly the twenties to the present, that is, the epoch encompassing the larger metropolitan cultural phenomena of Modernism and Postmodernism. Course not offered every year Also Offered As: COML 694, LALS 694, SPAN 694 Activity: Seminar 1 Course Unit

CIMS 793 Topics in Cinema and Media
Topic varies. Course not offered every year Also Offered As: ARTH 793, ENGL 797, GSWS 793 Activity: Seminar 1 Course Unit

CIMS 899 Independent Study
Course not offered every year Activity: Independent Study 1 Course Unit
City and Regional Planning (CPLN)

CPLN 300 The Making of Modern Paris
Paris, Ville Lumiere, has long been renowned for its urbanity, architecture, and city design. This class will trace the people, ideas, and projects that contributed to this reputation, through an exploration of the city's built environment as expressed in literature and urban planning projects of the 19th and 20th centuries. Literary readings, including texts by Hugo, Baudelaire, Zola, and Breton, will be studied in conjunction with historical writings and projects ranging from works by Napoleon III and Haussmann to Mitterrand and Sarkozy. The course includes a field trip to France's capital city during Peni's Spring Break. Co-taught by Professors Eugenie Birch (Department of City and Regional Planning) and Andrea Goullet (Department of Romance Languages). Student travel expenses will be subsidized by the Mellon Foundation-sponsored Humanities + Urbanism + Design Project.
Taught by: Birch
Course usually offered in spring term
Activity: Seminar
1 Course Unit

CPLN 500 Introduction to City Planning: Past, Present and Future
Orientation to the profession, tracing the evolution of city and regional planning from its late nineteenth century roots to its twentieth century expression. Field trips included.
Taught by: Vitiello or Ammon
Course usually offered in fall term
Also Offered As: URBS 440
Activity: Lecture
1 Course Unit

CPLN 501 Quantitative Planning Analysis Methods
Introduction of methods in analyzing demographic conditions, land use and housing trends, employment and business changes, community and neighborhood development. Focus on using spreadsheet models and data analysis for local and neighborhood planning.
Taught by: Guerra
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit

CPLN 502 Urban Redevelopment and Infrastructure Finance
Introduces students to the economic principles and vocabularies that city and regional planners rely on (those of welfare and public sector economics, land economics, and the economics of housing and neighborhoods), and familiarizes them with local government taxation, budgeting and borrowing practice.
Taught by: Angelides
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 503 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing-based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Taught by: Tomlin or Hillier
Course usually offered in fall term
Also Offered As: MUSA 503
Activity: Lecture
1 Course Unit

CPLN 504 Site Planning
This course introduces students to the practice of site planning. Skills and methods examined in the course include observation of the physical and community environment; physical and environmental site inventorying and analysis; analysis of alternative site programming and uses; site design processes and strategies; and the creation of site plans and development standards. Methods of community participation and collaboration with other disciplines will be explored. The spring version of this course differs from the fall version in its orientation toward urban designers and/or those with prior design backgrounds and skills.
Taught by: Page
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 505 Planning by Numbers
This class emphasizes the theory, practice, and use of statistics as applied to planning and policy problems and data. Starting with a review of basic descriptive statistics and measures of association, this course will introduce students to the regression techniques, including multiple regression analysis and logistical and probabilistic models for categorical data; data mining techniques, measures of spatial autocorrelation, and time-series modeling; and causal inference techniques, including structural equation modeling (SEM). A basic familiarity with descriptive and inferential statistics at the upper-division undergraduate level is expected at the beginning of the class. This course uses the popular, free, and open-source statistical software R. Meets methods breadth requirement.
Taught by: Ryerson
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 506 Negotiation and Conflict Resolution
This course is designed to introduce graduate students to the theory and practice of negotiation, conflict resolution and community engagement. We will start by looking at basic approaches to interpersonal negotiation and then move to considering contemporary approaches to understanding and addressing public disputes using negotiation, facilitation and public involvement. Design professionals - architects, construction managers, planners and others - face a variety of kinds of problems and challenges. Some problems and challenges, whether simple, complex, are amenable to technical solutions based solely on the expertise of planners, managers, architects and others. There are, however, other problems and challenges that require adaptive work, primarily because technical expertise alone is insufficient to address the problems or challenges that are facing. In this course, we’ll focus on perspectives and methods for working through those later sorts of problems and challenges. Meets methods breadth requirement.
Taught by: Sokoloff
Course usually offered in spring term
Activity: Lecture
1 Course Unit
CPLN 507 Urban Design Research Methods
This seminar focuses on professional and research techniques in the practice of urban design. Seminar topics in the first half will examine research methods associated with measuring, analyzing and guiding design in urban contexts, including: environmental behavior & psychology, cognition, mapping, morphology, design regulation and policy. The second half of the course includes professional techniques in: communication, self-representation, design roles, processes, and ethics.
Taught by: AI
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CPLN 508 Urban Research Methods
This new course will introduce students to the practice of conducting original social, policy, and planning research in an urban context, and through a series of applied exercises, cover the following topics: research conceptualization and design, logic models, survey and ethnographic research, urban policy analysis and evaluation.
Activity: Lecture
1 Course Unit

CPLN 509 Law of Planning and Urban Development
The central focus will be on selected aspects of the field of the law of planning and development, a field that embraces a range of legal doctrines that are particularly relevant to cities and suburbs. We will study the principles that govern the regulation of land use and management of urban growth (through land use controls and other techniques for regulating new development) and, to a limited extent, environmental planning laws.
Taught by: Keene
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 510 Urban and Planning Theory
This course will consider the theories and practices of urban economic and community development with a focus on improving opportunity and quality of life in low-income communities. Provides foundation for advanced courses in real estate and economic development finance, housing policy, downtown and neighborhood revitalization, workforce development and metropolitan regional development.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 520 Introduction to Community and Economic Development
This course introduces students to the theories and practices of urban economic and community development with a focus on improving opportunity and quality of life in low-income communities. Provides foundation for advanced courses in real estate and economic development finance, housing policy, downtown and neighborhood revitalization, workforce development and metropolitan regional development.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 528 Research Seminar 21st Century Urbanism
Course usually offered in spring term
Also Offered As: URBS 428
Activity: Seminar
1 Course Unit

CPLN 530 Introduction to Land Use Planning
Exploration of the methods and tools for managing land use and shaping the built environment. Presents how to create a successful Comprehensive Plan, Zoning Ordinance, Subdivision Regulations, Capital Improvements Program, and design guidelines. Also, presents functional area, regional, and state level plans.
Taught by: Daniels
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CPLN 531 Introduction to Environmental Planning & Policy
Overview of federal programs for protecting air quality, water quality, endangered species along with managing climate change, solid waste, toxics, energy, transportation, and remediating brownfields in an overall sustainability framework. State-level, local government, and NGO efforts to protect the environment are also explored as are green infrastructure and green cities.
Taught by: Daniels
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CPLN 535 Topics in Energy Policy
This research seminar focuses on changing energy policy topics that provide students with a deep examination of an aspect of energy technology, markets, or regulation and an opportunity for research on an emerging issue related to the topic. The seminar meets weekly to discuss the relevant literature and workshop student research projects.
Taught by: Staff.
Also Offered As: ENMG 503
Activity: Seminar
1 Course Unit

CPLN 540 Introduction to Property Development
This course is designed to acquaint students with the fundamental skills and techniques of real estate property development. It is designed as a first course for anyone interested in how to be a developer, and as a foundation for further courses in urban development and real estate.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CPLN 550 Introduction to Transportation Planning
Survey of the technological and design aspects of urban transportation systems and land use patterns. Covers facilities operations, congestion, environmental concerns and policy debates revolving around mobility issues at the federal, state, and metropolitan levels.
Taught by: Guerra
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CPLN 560 Introduction to Graphics for Urban Design
This course introduces students to visual literacy and the use of a variety of software packages. Through a series of assignments and in class discussions participants develop a visual vocabulary and skills to function in and between AutoCAD, Adobe Creative Suite, and 3D modeling software.
Taught by: Fogelson
Course usually offered in spring term
Activity: Seminar
1 Course Unit
CPLN 571 Sensing the City
This course will teach students how to design, implement, and utilize environmental and built environment sensor and web-based data acquisition systems; how to use these systems to build and populate analytical databases; and how to analyze the resulting data to identify spatial and temporal patterns.
Taught by: Lassiter
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CPLN 590 Spatial Analysis for Urban and Environmental Planning
This course builds on prior knowledge of GIS and basic statistics to help students to develop GIS and spatial analysis applications for use in urban and environmental planning and management. Each weekly session will focus on a particular analytical approach (e.g., buffering, geo-processing, map algebra, network analysis) as applied to a particular urban or environmental planning tasks (e.g., identification of development opportunities, prioritizing conservation lands, urban growth modeling, housing price modeling). The format of the class includes weekly lectures/in-class demos; and weekly homework assignments. The course will make extensive use of ArcGIS and associate Extensions, especially Spatial Analyst, Network Analyst, and Business Analyst. One-year student versions of ArcGIS and ArcGIS extensions will be available free of charge at the City Planning Office. ArcGIS runs best on Windows machines; those with Macs will need to install a Windows emulator.
Taught by: Steif
Course usually offered in fall term
Also Offered As: MUSA 507
Prerequisite: MUSA 501 or CPLN 503 or equivalent
Activity: Lecture
1 Course Unit

CPLN 600 Planning Workshop
Application of planning skills (including community inventorying and reconnaissance, goal articulation; alternatives creation and analysis, and plan development and implementation) to community plan creation. Students work in groups of seven to eight students each. Juried presentation required.
Taught by: Lands
Course usually offered in spring term
Activity: Studio
2 Course Units

CPLN 620 Techniques of Urban Economic Development
This course is about how planners act to catalyze and support economic well-being in cities and regions. Students in the course examine the effectiveness of alternative strategies and approaches to economic development and practice a variety of specific economic development policy and finance techniques. The semester is divided into three modules. In part one, students build knowledge about how theories of growth, specialization, agglomeration and innovation inform (and fail to inform) economic development strategies. In part two, they develop a working understanding of economic development finance, completing exercises on tax increment finance, tax-credit financed development and "double bottom line" lending and equity investment. In part three, they review best practices in the formulation and negotiation of location incentives and subsidies, examine "growth with equity" policies, and explore the technical and political details of economic impact analysis.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 621 Metropolitan Food System
This course introduces students to the planning and development of metropolitan food systems. Major topics include regional planning and policy; sustainable agriculture; food access and distribution; and markets. The class includes a mix of lectures, discussion, and field trips; and students will work on real-world projects in Philadelphia. Ultimately, the course aims to develop students' broad knowledge of food systems planning in the global North and South, with an emphasis on community and economic development strategies for sustainable food systems and food security.
Taught by: Vitello
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 622 Community Development and Public Health
This course will focus on the intersection of city planning and public health by looking closely at the role of the built environment in health. We will cover such topics as food access, physical activity, walkability, bike-ability, air quality, water quality, community engagement, outdoor media and health communication. We will learn how to conduct Health Impact Assessments (HIA) - screening, scoping, assessments, recommendations, reporting and monitoring - and to use various environmental audit tools to measure the built environment. Our final projects will involve working with local government and nonprofit agencies to conduct applied health research projects.
Taught by: Hillier
Course usually offered in spring term
Also Offered As: PUBH 515
Activity: Lecture
1 Course Unit

CPLN 624 Race, Poverty and Place
In recent years, long-disinvested cities have become the site of renewed investment, population growth, and economic development in a phenomenon often described as gentrification. Nonetheless, socioeconomic inequality between races, ethnicities, genders, and places within the larger metropolitan area continue to persist, suggesting that a rising tide does not raise all boats. Planners must grapple with these issues of inequality and equity, particularly the implementation of plans and policies that may in theory provide benefits to all, but in practice continue to accumulate benefits for a select few. This course examines the construction of race, the making of a place, and the persistence of poverty in racialized places in the city. This course will engage in a critical discussion of the aforementioned themes, such that the normative notions of race, capitalism, urbanism, gender, power, and space are upended to privilege more marginalized perspectives of these processes.
Taught by: Drake-Rodriguez
Course usually offered in spring term
Activity: Seminar
1 Course Unit
CPLN 625 Politics of Housing & Community Development
This course offers an exploration of how legislative action, government policy making, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.
Taught by: Kromer
Course usually offered in fall term
Also Offered As: GAFL 569, URBS 451
Activity: Lecture
1 Course Unit

CPLN 627 Social Impact in Practice
The course will be an opportunity for students across PennDesign (and other schools) to meaningfully engage with community partners and practitioners working in Philadelphia and the surrounding region, and to grapple with the complex issues necessary for understanding community perspective, thereby influencing the approach when planning and designing as professionals. The course intends to reverse common perceptions and practices of community engagement ("beyond the theater of engagement") and discuss how to productively and sensitively work with communities of all types, on projects of all scales, to work towards common goals and high aspirations. The organization of the course, will be a combination of readings and discussions, guest lecturers, and tours in the immediate community. The primary assignments will be reflection pieces, case studies, a collaborative group project, and a implementation project proposal. The group project(s) would partner students with a current, ongoing, or new community project that is funded and actionable. Students will work together, with the partner, and with community members to complete a project (could be built, a printed deliverable, evaluation, or other). The final assignment would ask students to brainstorm and present a potential "Phase II" implementation project, thinking through the mechanics of funding partnerships, academic research, etc, that could carry forward the work.
Taught by: Donofrio, Julie / Gould, David
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CPLN 630 Innovations in Growth Management
The US population is expected to grow by more than 85 million from now to 2050. This course evaluates the tools and techniques for managing growth in America, especially to control sprawl in metropolitan regions. The course analyzes the form and functions of the central cities, suburbs, edge cities, exurbs, and megaregions. Federal, state, and local programs that influence metro change are evaluated. Regional planning approaches are analyzed in case studies.
Course usually offered in spring term
Prerequisite: CPLN 530 or CPLN 531
Activity: Lecture
1 Course Unit

CPLN 631 Planning for Land Conservation
Land preservation is one of the most powerful, yet least understood planning tools for managing growth and protecting the environment. This course provides an introduction to the tools and methods for preserving private lands by government agencies and private non-profit organizations (e.g., land trusts). Topics include purchase and donation of development rights (also known as conservation easements), transfer of development rights, land acquisition, limited development, and the preservation of urban greenways, trails, and parks. Preservation examples analyzed: open space and scenic areas, farmland, forestland, battlegrounds, and natural areas.
Taught by: Daniels
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 632 Modeling Geographic Space
The major objective of this course is to explore the nature and use of image-based (as opposed to drawing-based) geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes. This course is open to all. Previous experience in GIS is not required.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: LARP 741
Activity: Lecture
1 Course Unit

CPLN 633 Water Policy
Aging infrastructure, urbanization, climate change, and limited public funds are contributing to urban water management crises in cities around the globe. This course examines the systems and policies that comprise urban water. We begin with the infrastructures that underlie drinking water, wastewater, and stormwater services. Then, we review innovative management technologies and strategies, focusing on case studies of infrastructure shifts in Philadelphia and Melbourne. Finally we undertake a global investigation of water management challenges and opportunities.
Taught by: Lassiter
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CPLN 641 Progressive Development
Using a lecture/guest lecture/case study approach, this course will teach students how to plan, develop, and finance a variety of progressive real estate development forms including affordable housing; infill, mixed-use and brownfield development transit-oriented development; green and LEED-certified office and housing development; historic preservation projects; public-private partnerships; and suburban retrofit and master-planned-community development. In each case, we will consider site acquisition, entitlement, market and marketing conditions, financing options, ownership and deal structures, ongoing operation and asset management issues; and connections to the community. Sessions will include lectures as well as case study presentations by guest developers and students.
Taught by: Landis
Course usually offered in spring term
Prerequisite: CPLN 540 or REAL 821
Activity: Lecture
1 Course Unit
CPLN 642 Downtown Development
The course will provide an overview of the changing role of downtowns and commercial centers, how and why they have evolved, diversified and been redeveloped and who are the various public and private actors that are helping them reposition themselves in a new regional and global context. There will be a strong focus on implementation, on how things get done, on the role of business improvement districts, non-for-profit development corporations and local government in the United States, Canada and a few international cities.
Taught by: Levy
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CPLN 643 Design and Development
This newly reconstituted course will introduce designers and planners to practical methods of design and development for major real estate product types. Topics will include product archetypes, site selection and obtaining entitlements, basic site planning, programming, and conceptual and basic design principles. Project types will include, among others; infill and suburban office parks, all retail farms, campus and institutional projects. Two-person teams of developers and architects will present and discuss actual development projects.
Taught by: Scherst
Course usually offered in spring term
Also Offered As: ARCH 762
Activity: Lecture
1 Course Unit

CPLN 644 Housing Policy
The government intervenes in housing markets in different ways and for different reasons. This course is designed to explore why the federal and local government in the U.S. intervene in housing markets and what forms these interventions take. Specifically, students will learn about: the mechanisms that drive both the supply and demand for housing; how U.S. housing policy has changed over time; factors that affect the production, distribution, and location of housing; the social and economic impact of housing on households and neighborhoods; the equity implications of housing policies. This course will place particular emphasis on low-income rental housing. By the end of this class students will have a firm understanding of U.S. housing policy and be able to engage in a meaningful debate about future challenges and opportunities in the U.S. housing market and the implications of different policy interventions. Ultimately, this course will provide students the conceptual tools necessary to evaluate, formulate, and implement housing policy.
Taught by: Reina
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CPLN 650 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: ESE 548
Prerequisites: CPLN 505 or other planning statistics course.
Activity: Lecture
1 Course Unit

CPLN 652 Topics in Infrastructure
Course examines current trends and topics pertaining to the nation's infrastructure.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CPLN 653 Global Challenges in International Development
An investigation of how international organizations, national, subnational government and non-governmental groups are responding to recent global agreements addressing major economic, social and environmental issues, this course will focus on the Sendai Framework, Addis Ababa Action Agenda, 2030 Framework for Sustainable Development, Paris Agreement and New Urban Agenda. It will cover selected topics related to poverty reduction, health, food security, disaster risk reduction, climate change, and urbanization. Course objectives: 1. to provide a sophisticated understanding of the fundamental assumptions, definitions, current state, and proposed paths toward a global sustainable development to students of city and regional planning; 2. to outline the role of city and regional planners as members of multi-disciplinary teams in participating in these agreements at the global, national, regional and local levels; 3. to highlight innovations in the models, tools and approaches to the field.
Requirements: team project, midterm examination and final paper.
Taught by: Eugenie Birch
Course usually offered in spring term
Activity: Seminar
1 Course Unit

CPLN 655 Multimodal Transport
The purpose of this course is to explore contemporary multimodal transportation systems, policy, planning, and practice through a series of comparative international case studies. Topics include innovative parking management in San Francisco, congestion charging in London, Metro investments in Mexico City, informal transportation in Indonesia, Bus Rapid Transit in Bogota, and bicycle infrastructure investments in Copenhagen. The course will also include one or more site visits to innovative multimodal transportation projects in the Philadelphia or New York City regions. By analyzing contemporary planning challenges and best practices, students will develop a better understanding of how the transportation system works and how to design and employ specific multimodal interventions and policies effectively.
Taught by: Guerra
Course usually offered in spring term
Activity: Lecture
1 Course Unit
CPLN 660 Fundamentals of Urban Design
This course is a requirement for students enrolled in Certificate in Urban Design and for Master of City Planning students enrolled in the Urban Design concentration. How should urban designers give shape to the city? What urban design methods could they apply? This course helps students acquire the principles that can inform urban design practice. It has three major pedagogical objectives. First, it helps students understand the contemporary city through a series urban design tools. Second, it covers both historical and modern urban design principles. Finally, it includes all the scales in which urban designers operate, ranging from the fundamentals of social interaction in public space, to the sustainability of the region. This course is open to other interested PennDesign students if there is space and with permission of the instructor.
Taught by: Al
Course usually offered in spring term
Also Offered As: LARP 660
Activity: Studio
2 Course Units

CPLN 662 Design and the City
"The rumor of a great city goes out beyond its borders to all the latitudes of the known earth." Metropolis and her children, the Federal Writers; Project Guide, 1938. Great cities are both real and legendary. They have economies and cultures, identity and brand, pattern and chaos, inclusion and exclusion. They are made by men (and women) who either reap the benefits of their labors or are excluded from them. They are dynamic, or they are dead. Constant change is essential to the city. This seminar will explore the ways in which design - including architecture, urban design, and landscape design - is a constructive force in the creation of cities. What are the various scales of the operation of design? What are its elements? With whom do urban designers collaborate? How does design make "place"? How is the city experienced? How does it cultivate identity, inclusion and equity? Each class will be a wide-ranging discussion about a series of open questions regarding the city and design. Each student will be expected to bring examples, quotes, readings, and news clips to support his/her answers. In alternating weeks, we will introduce a design problem to be addressed by teams of two or three students.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CPLN 670 Geospatial Software Design
The purpose of this course is to equip students with a selected set of advanced tools and techniques for the development and customization of geospatial data-processing capabilities. It is open to any student with experience equivalent to that of an entry-level class on GIS.
Taught by: Tomlin
Course usually offered in fall term
Also Offered As: LARP 743
Activity: Seminar
1 Course Unit

CPLN 671 Big Urban Data Analysis
This course, co-listed with MUSA 501, will introduce graduate planning students to the use of large, spatially-explicit datasets for addressing urban planning and management problems. Among the topics to be included: (1) Real-time data acquisition using web-based and sensing technologies; (2) Data cleaning and organization using the R programming language; (3) Data visualization and exploratory analysis in R; (3) Predictive and causal modeling techniques using large datasets in R; (4) Use of statistical data reduction and machine learning techniques with big data; (5) Derivation and use spatial autocorrelation and other spatial patterning metrics in urban planning applications of big data; (6) Heuristic visualization of analytical and modeling results.
Taught by: Brusilovsky
Course usually offered in fall term
Also Offered As: MUSA 500
Activity: Lecture
1 Course Unit

CPLN 673 Contemporary Urbanism
This course will expose students to a wide array of case studies in Planning, Urban Design, and Landscape Architecture. They include: notions of sustainable development, the interplay between open space and built form, the rehabilitation of existing areas as historic districts, commercial corridors, and the improvement of squatter settlements. Also, it will focus on city expansions and new towns, housing, mixed-use developments, and areas of new centrality. The program will address as well territorial planning, the improvement of open space systems, and site specific interventions of parks, plazas, streetscape and gardens. Cases will provide the proper ground for analysis and interpretation of issues related to the design and implementation of "good" landscape and urban form. Class discussions will be complemented with short design exercises. We will also enjoy the presence of outstanding visiting lecturers, who will share with us cutting edge information, derived from their professional practice and research. Registration limited to students in the MLA 602 level; students in the Certicate in Urban Design program and a limited number of MLA students needing to fulfill the Theory III requirement; other PennDesign graduate students must seek permission of the instructor.
Taught by: Gouverneur
Course usually offered in spring term
Also Offered As: LARP 781
Activity: Lecture
1 Course Unit

CPLN 675 Land Use and Environmental Modeling
Planners at every scale and of every type are increasingly using spatial data and models to analyze existing patterns, identify and parameterize key trends and urban processes, visualize alternative futures, and evaluate development impacts. This course will introduce students to various GIS-based land use and environmental planning models, including, among others: TR55 for analyzing parcel-level stormwater runoff; BASINS for analyzing watershed-level stream volumes, runoff, and water quality; HAZUS for analyzing the potential damage impacts of floods, earthquakes, and hurricanes; UPlan and CUF/CURBA for developing detailed urban growth projections; CommunityViz for analyzing, simulating, and visualizing the impacts of proposed development projects; and other packages as available. A basic familiarity with ArcGIS is required.
Taught by: Landis
Course usually offered in spring term
Prerequisites: Some knowledge of GIS and statistics.
Activity: Laboratory
1 Course Unit
CPLN 676 The Immigrant City
Immigration is among the most important phenomena shaping neighborhoods, cities, and regions. Understanding migration is fundamental to understanding urbanization, community development, and urban society today. This course examines the development of immigrant communities in United States cities and suburbs. Class readings, discussions, and visits to a variety of Philadelphia immigrant neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, and the public sphere. We study the diverse dynamics and impacts of immigration through foundational readings and close observation of various newcomer and receiving communities. The first part of the course surveys migration and community formation among a broad range of ethnic groups in different sorts of city and suburban neighborhoods, mainly through history, sociology, and geography. The second part focuses on public policy and community and economic development practices related to migration at the local, regional, national, and transnational scales.
Taught by: Vitiello
Course usually offered in spring term

1 Course Unit

CPLN 680 Advanced Topics in GIS
The primary objective of this course is to equip students with a selected set of sophisticated and specialized tools for the practical use of geographic information systems in a variety of application settings. Participants will have the opportunity to focus on particular topics in each of four major areas including: data acquisition - e.g. remote sensing, LiDAR imagery, global positioning systems, mobile GIS, applied geocoding, geodatabases, ArcSketch, and/or CAD interaction; communication - e.g. web mapping, animation, and/or professional cartographic techniques; problem solving - e.g. cartographic pattern recognition, geospatial allocation, agent-based modeling, geostatistics, network analysis, and/or spatio-temporal simulation; and tool building - e.g. Python scripting, GoogleMap mashups, and/or open source GIS. The course is conducted in a seminar format with weekly sessions devoted to lectures, demonstrations, and discussions conducted by the instructor, students and invited guests. Offered in the spring annually.
Taught by: Tomlin
Course usually offered in fall term
Also Offered As: LARP 745
Activity: Seminar
1 Course Unit

CPLN 685 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Steiner
Course usually offered in fall term
Also Offered As: ARCH 482, LARP 780
Activity: Seminar
1 Course Unit

CPLN 690 Java and Javascript Programming for Planning Applications
This course will introduce city planning, MUSA and design graduate students to Java and Javascript. Students will learn the logic and syntax of the Java programming language for use in simple web applications (Weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (Weeks 8 to 14). The “hands-on” uses of Java and Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: MUSA 610
Activity: Laboratory
1 Course Unit

CPLN 691 Data Wrangling and Visualization
The purpose of this course is to familiarize students with the “pipeline” approach to data science. This involves the process of gathering data; sorting the data; analyzing the data and visualizing the data such that non-technical managers can make use of it for decision making. The first part of the course teaches students how to gather data by way of scraping APIs, Google Big Query, Twitter and other unstructured sources. The second part of this course, teaches students how to store and retrieve these data in a database. The third part of the class teaches some more esoteric machine driven analytics. The fourth and final component of the class is data visualization both in static and dynamic (web-based) form. The students will be expected to replicate this pipeline on a dataset of their own choosing for their final project.
Course usually offered in spring term
Also Offered As: MUSA 620
Prerequisites: Prerequisites include a working knowledge of R and ArcGIS.
Activity: Seminar
1 Course Unit
CPLN 692 Java Script Programming for Planners and Designers
This course will introduce City Planning, MUSA and design graduate students to Javascript. Students will learn the logic and syntax of the Java programming language for use in a simple web application (weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (weeks 8 to 14). The "hands-on" uses of Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.

CPLN 720 Community and Economic Development Practicum
This practicum involves a weekly mixture of lecture and seminar course-time with applied problem solving for real-world clients. It will be a second-year course focused on organizational development, business planning, and other strategic planning techniques that complement the physical planning focus on PennPlanning Workshop and Studio. Required of students in the CED concentration.
Taught by: Servon
One-term course offered either term
Activity: Lecture
1 Course Unit

CPLN 730 Sustainable Cities
Sustainability as a concept has been around for almost thirty years, but only recently has become a major factor in planning practice. This seminar course will explore the following sustainability topics and practices: (i) Goals and organization of urban sustainability initiatives; (ii) Transportation, water and air quality, solid waste reduction; (iii) Climate change and energy efficiency initiatives; and (iv) Green building policies. We will thoroughly examine case studies drawn from sustainability planning initiatives from major American cities, with selected international comparisons.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

CPLN 750 Advance Transportation Seminar, Air Transportation Systems Planning
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lecturers, case studies of airport development, and an individual group and research project.
Taught by: Ryerson
Course usually offered in spring term
Also Offered As: ESE 550
Prerequisite: CPLN 550 or equivalent
Activity: Seminar
1 Course Unit
CPLN 760 Public Realm Studio
This intensive foundation studio focuses on the physical planning and design skills necessary in shaping the public realm. Students will undertake a series of targeted exercises that introduce them to project conceptualization, context analysis, programming, site planning, technical issues, and detailed design of public space in cities. Focusing on issues pertinent to local municipalities, students will work collaboratively and individually over the semester on design elements that cover a range of scales. Intellectual objectives within the studio include: the links between theory and practice, the development of principles to guide design, understanding associations between design and stakeholder-user interests, and exploring larger issues of sustainability and participation in design practice. Emphasis on the pragmatics of problem solving and implementation will be balanced with essential skills in visioning, critical thinking and design leadership.

Taught by: Al
Course usually offered in fall term
Activity: Studio
2 Course Units

CPLN 790 Smart Cities Seminar
The purpose of this course is to have students to work with city and non-profit clients on analytical projects that convert client data into actionable intelligence. Groups of 3-4 students will work with the client to understand the business process, wrangle data, develop spatial and spatial analytics and serve these outputs to non-technical decision makers through the medium of data visualization. Students will be mentored by MUSA Faculty and advised by someone from the partnering agency. Prerequisites: students must have a working knowledge of R and experience building both spatial and statistical models including machine-learning models. In order to be eligible for this course, students must have taken the following courses - 1) MUSA 507/CPLN 590 and either CPLN-505 or MUSA-500. Students must have taken or be enrolled concurrently in MUSA 601 or MUSA 800. Students without these specific prerequisites are asked to contact the instructor. Admission into the course: for spring 2018, there are initially 16 open seats with the possibility of another 4 opening up. To be admitted into the course, students are asked to pick one of the practicum projects and write no more than 300 words about why the use case is of interest, how they might go about solving the problem, and its usefulness to city. Please also discuss which data-drive skills are your sharpest. The essay should be turned into the City Planning Office in Meyerson Hall. Projects (subject to change): Louisville, Kentucky-Traffic Flows and Smart Signal Modeling: students will work have access to high-resolution traffic data from Waze and historical traffic signal information from the City. The goal is understand the traffic pattern that might result from a given traffic signal configuration. Can discover a configuration that is amenable to mode choice like walking or biking? Minneapolis, Minnesota Code Enforcement: Minneapolis has a problem where too many construction projects are happening illegally. Unpermitted construction work may result in unsafe living conditions and worse. This project is to help the city predict where illegal work may be happening and how inspectors can better enforce existing permit regulations. Philadelphia, PA-Equitable Bike Share Planning: one of the policy goals of Philadelphia’s bike share system is to expand into neighborhoods where bike share demand may not be profitable but where the subsidies might induce more sustainable mode choice in the future. Working with the Bicycle Coalition of Greater Philadelphia, the goal of this project is for students to build and algorithm, which can predict bike share demand for any location Citywide.

Course usually offered summer term only
Activity: Lecture
0 Course Units

CPLN 800 Doctoral Seminar
Open to PhD students, this scholar-oriented seminar explores how academic researchers from different disciplines define researchable questions, craft research designs, and contribute to knowledge through an examination of important and/or recently published books and monographs with an urban focus. Required of all first- and second- year CPLN doctoral students and those doctoral students enrolled in the Urban Studies Graduate Certificate Program, enrollment is limited to 15 students. Other doctoral students may enroll on a space available basis. Course requirements include completion of a major research paper on a topic selected in consultation with the instructor.

Notes: Ph.D. candidates. Independent study and research under faculty supervision.

Classical Studies (CLST)

CLST 010 Archaeology & Technology
This seminar explores how humans apply and modify technologies in contexts as diverse as everyday life, major politico-economic undertakings, or scholarly research. We investigate this through a comparison of technologies of the past with technologies of the present used to study the past. We will dig into the details of topics like building pyramids and tombs, the function of ancient astronomical devices, pre-teleglaph long-distance communication, tools for cutting and carving stone, and kilns for firing pottery. Archaeologists study these issues by examining the material remains of past societies: the cut-marks on stone blocks, extant tomb structures, the debris of manufacturing activities, and much more. Today’s technologies enable the detailed scientific examination of the evidence, improving our understanding of the past. Thus, in parallel with our investigation of past technologies, we will also study the history of the application of present technologies to research on the archaeological record. We will dig into topics like the first uses of computers and databases, the development of statistical methods, early digital 3d modeling of objects and architecture, the adoption of geophysical prospection and geographic information systems, and the emerging uses of machine learning. In some cases, we can even compare old and new technologies directly, such as with land measurement and surveying techniques. Throughout the class we will engage in readings and discussions on the theory of humans and technology, to gain a better understanding of how processes such as innovation function in all time periods.

Activity: Seminar
1 Course Unit
CLST 020 Plato: Democracy and the Power of Rhetoric
If you aspired to a political career in ancient Athens, public speaking was an essential skill. Athens was a direct democracy, which meant that having the ability to win over your fellow citizens was tantamount to political success. Young, ambitious citizens would therefore pay handsomely to study with rhetoricians, who professed to teach this all-important skill. Plato, however, was famously wary of the power of rhetoric. In this class, we will read selections from Plato’s dialogues in which many of the most prominent rhetoricians are engaged in discussion with Socrates about the nature of rhetoric, as well as its potential benefits and pitfalls. Students will then assume the role of citizens charged with speaking before the Athenian Assembly on various subjects. This will likely include a recreation of the trial of Socrates, who was himself accused of using rhetoric to make the weaker argument the stronger. By examining democracy at its threshold, and the power wielded by rhetoricians within a democracy, this CWIC seminar aims to provide both the context and the perspective to consider its later evolution.

Grades will be based on at least two oral presentations, as well as general participation in other classroom activities.

Also Offered As: PHIL 030
Activity: Seminar
1 Course Unit

CLST 026 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles’ Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, “Know Thyself.” For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.

1 Course Unit

CLST 027 Ancient Rome
The Roman Empire was one of the few great world states-one that unified a large area around the Mediterranean Sea-an area never subsequently united as part of a single state. Whereas the great achievements of the Greeks were in the realm of ideas and concepts (democracy, philosophy, art, literature, drama) those of the Romans tended to be in the pragmatic spheres of ruling and controlling subject peoples and integrating them under the aegis of an imperial state. Conquest, warfare, administration, and law making were the great successes of the Roman state. We will look at this process from its inception and trace the formation of Rome’s Mediterranean empire over the last three centuries BC; we shall then consider the social, economic and political consequences of this great achievement, especially the great political transition from the Republic (rule by the Senate) to the Principate (rule by emperors). We shall also consider limitations to Roman power and various types of challenges, military, cultural, and religious, to the hegemony of the Roman state. Finally, we shall try to understand the process of the development of a distinctive Roman culture from the emergence new forms of literature, like satire, to the gladiatorial arena as typical elements that contributed to a Roman social order.

CLST 029 Rome & America
This course explores a range of social structures and contexts, cultural understandings and intellectual practices where the influence of Roman exemplars is discernible in both historical and present-day America. It presents students with Roman and American materials placed in explicit or implicit dialog with one another, e.g., descriptions and discussions of political processes and structures; attitudes towards games, public entertainments, and communal cohesion; rhetorics and vocabularies of public space. Among other tasks and projects, students will stage a ‘reimagining’ of the Constitutional (Philadelphia) Convention of 1787, which resulted in the United States Constitution. They will also emulate ancient moralists and satirists, who attacked Rome’s ‘Bread and Circuses’ culture, by focusing their attention upon comparable practices in modern America.

Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Freshman Seminar
CLST 100 Greek & Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

Taught by: Struck
Course usually offered in spring term
Also Offered As: COML 108
Activity: Lecture
1 Course Unit

CLST 102 Classical Traditions
A broad consideration of the ways in which writers and artists from the early modern era to the present day have responded to the classical tradition, borrowing from, imitating, questioning, and challenging their classical predecessors. Through modern reworkings of ancient epic, tragedy, biography, and lyric by authors ranging from Shakespeare and Racine to contemporary poets, painters, and filmmakers, we will ask what the terms "classical" and "tradition" might mean and will track the continuities and differences between antiquity and the modern world. Should we see ancient Greek and Roman culture as an inheritance, a valuable source of wealth bequeathed to the modern age? Or is there something wrong with that picture? How do ancient texts have to be adapted and transformed if they are to speak to modern conditions and concerns? This is an introductory-level course open to anyone who cares about the relationship between the present and the past.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: ENGL 029
Activity: Lecture
1 Course Unit

CLST 103 History of Ancient Philosophy
An introduction to the major philosophical thinkers and schools of ancient Greece and Rome (The Presocratics, Plato, Aristotle, Stoics, Epicureans, and Skeptics). Topics to be covered include: nature of the universe, the relation between knowledge and reality, and the nature of morality and the good life. We will also examine some of the ways in which non-philosophical writers (e.g., Homer, Hesiod, Aristophanes, and Thucydides) treat the issues discussed by the philosophers.

Taught by: Meyer
Course usually offered in fall term
Also Offered As: PHIL 003
Activity: Lecture
1 Course Unit

CLST 107 Ancient Drama
This course will introduce students to some of the greatest works of dramatic literature in the western canon. We will consider the social, political, religious and artistic functions of drama in ancient Greece and Rome, and discuss both differences and similarities between ancient drama and modern art forms. The course will also pursue some broader goals: to improve students skills as readers and scholarly critics of literature, both ancient and modern; to observe the implications of form for meaning, in considering, especially, the differences between dramatic and non-dramatic kinds of cultural production: to help students understand the relationship of ancient Greek and Roman culture to the modern world; and to encourage thought about some big issues, in life as well as in literature: death, heroism, society, action and meaning.
For BA Students: Arts and Letters Sector
Course not offered every year
Activity: Seminar
1 Course Unit

CLST 111 Introduction to Mediterranean Archaeology
The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden hut, from the Aphrodite of Knidos to the bones of a fisherman named Peter.

Course usually offered in fall term
Also Offered As: ANTH 111, ARTH 227
Activity: Lecture
1 Course Unit

CLST 123 Great Discoveries in Archaeology
Archaeology is a young and exciting scientific discipline created around 150 years ago as a way to discover and interpret the material remains of our human past. Many archaeological sites are world-famous: Pompeii, Troy, the pyramids of Egypt, the Parthenon of Athens, the temple complex at Angkor, to name a few. In this course, we will examine many important archaeological sites, mainly in the Old World of the Mediterranean, Near East, and Asia, but also in the New World of North and South America. Using a thematic and comparative approach, we will delve deeper to explore the societies that produced these wonders, and examine cultural similarities and differences across the ancient world. This course is a non-technical introduction for students interested in archaeology, history, art history, anthropology, or related subjects. There are no prerequisites. A typical sequence of meetings will begin with lecture on a particular theme, such as Writing Systems or Sacred Spaces and Places, followed by the presentation of relevant monuments, sites, or regions from different parts of the world, with discussion and assessment of the cross-cultural similarities and differences. In this way, both the great diversity of culture in our world, as well as our underlying similarities, can be revealed. How different are we from our ancestors who lived hundreds or thousands of years ago? Museum visits and exercises will allow students to engage with the material creations of these civilizations.
Taught by: Tartaron
Activity: Lecture
1 Course Unit
CLST 127 The Material Past in a Digital World
The material remains of the human past—objects and spaces—provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context?
In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

Also Offered As: ANTH 127, ARTH 127, HIST 127, NELC 187
Activity: Lecture
1 Course Unit

CLST 129 The Decline and Fall of the Roman Empire?
The Roman Empire, teetering under the weight of its bureaucracy, oppressed by the demands of its soldiers, weakened by wave after wave of barbarian invasions, and, with the rise of Christianity, confronted by its own immorality, finally fell when the last Roman emperor, Romulus Augustus, was sent into exile in 476 CE. That, at least, is one version of the story. In truth, there are many stories that can be told of the period between the apogee of the Roman empire in the 2nd c. AD and the rise of Christianity and Islam and origins of the so-called Barbarian Kingdoms in the 7th and 8th centuries AD. This course will explore this period of 600 years, using methodologies from history, archaeology, social science and the sciences to understand the complex problem of empire and its evolutions. No previous knowledge of ancient or medieval history required.
Taught by: Bowes, Grey
Also Offered As: ANCH 129
Activity: Lecture
1 Course Unit

CLST 136 The Ancient Economy
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first “global” economies— they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world—demographics, trade, monetization, industry—but also ask critical questions about how—or if—modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.
Taught by: Bowes
Activity: Lecture
1 Course Unit

CLST 140 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with Snoop Dogg and Eminem? Many things, in fact, but perhaps the most fundamental is that they are all united by a stance that constantly threatens to offend prevailing social norms, whether through obscenity, violence or misogyny. This course will examine our conceptions of art (including literary, visual and musical media) that are deemed by certain communities to transgress the boundaries of taste and convention. It juxtaposes modern notions of artistic transgression, and the criteria used to evaluate such material, with the production of and discourse about transgressive art in classical antiquity. Students will consider, among other things, why communities feel compelled to repudiate some forms of art, while others into classics.

Course not offered every year
Also Offered As: COML 141
Activity: Lecture
1 Course Unit
Notes: Previously listed as CLST 240.

CLST 143 Great Books of Greece and Rome
The literature of ancient Greece and Rome has been foundational for the national literatures of Europe and the Americas, and in the modern period it remains one of the most influential and widely read world literatures. This course introduces many of the most representative works that define the Greek and Roman canon from Homer to Augustine, along with the most characteristic issues that they examine. In the process, students will become familiar not only with the works themselves, but with the idea of a literary canon consisting of “great books,” and will consider differing perspectives both on that idea and those of what constitutes a “foundational” or a “classical” literature, of literary influence, and of a community or culture defined in part by such a literature.

Course not offered every year
Activity: Lecture
1 Course Unit
Notes: For BA Students: Arts and Letters Sector

CLST 146 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most successful and influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.
Taught by: Wilker
Course usually offered in fall term

Activity: Lecture
1 Course Unit
CLST 148 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum's new Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum's collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

1 Course Unit

CLST 185 Ancient Political Thought
The way in which the Greeks understood and expressed their political institutions, activities and challenges has deeply impressed our own conception of politics. This course will trace the history of this ancient heritage from its inception to today, first through a close analysis of key texts from Thucydides, Plato, Aristotle, and Polybius, and then by considering several important moments in the reception of the Greek political tradition, from the Renaissance and American Revolution to the crisis of modernity and the Neo-Conservative Movement. We will evaluate the relationship between distant and recent past as well as the influence of both on our own day.
For BA Students: History and Tradition Sector
Course not offered every year
Also Offered As: PSCI 180
Activity: Recitation
1 Course Unit

CLST 191 World Literature: Classics of the World I
This course will introduce students to a wide array of literary works from across the world. It operates on the assumption that cultures have never been isolated from each other and that literature has always been in motion across national boundaries; it has been translated, adapted, and circulated. We will explore the genres, forms, and thematic preoccupations of major works that strive to imagine a wider world, while also studying the critical debates around the concept of world literature, from its origins with Goethe's essay on Weltliteratur to contemporary arguments about cosmopolitanism and globalization.
Taught by: Premoll/Irele
One-term course offered either term
Also Offered As: COML 191, ENGL 277
Activity: Seminar
1 Course Unit

CLST 199 Independent Study
Coursework and/or research undertaken independently by the student, supervised by a faculty member.
Activity: Independent Study
1 Course Unit

CLST 202 Cleopatra
Cleopatra VII (70/69 30 BCE) is one of the most famous women in world history. She has been remembered, admired, and reproached as a power-hungry Hellenistic queen, as the last pharaoh of Egypt, as a self-confident female ruler, and as the vicious seductress of Julius Caesar and Mark Antony. Her supposedly extravagant lifestyle, her political schemes, but also her integrity in choosing suicide over submission have inspired poets, artists, and historians from her own time to our modern world. In this seminar, we will take a closer look at some of the common perceptions and stereotypes that have shaped the image of Cleopatra for more than 2000 years. The main focus, however, will be on the historical queen, her biography, and the political and cultural contexts of her life. We will use ancient literary texts, papyri, inscriptions, coins, and archaeological evidence to analyze Cleopatras rise to power, how she presented herself to her subjects and how she was perceived by others, as well as her role in the tumultuous events that led to the end of the Hellenistic period and the rise of imperial Rome under the rule of Augustus.
Taught by: Wilker
Course not offered every year
Also Offered As: ANCH 202
Activity: Seminar
1 Course Unit

CLST 211 Ancient Moral Philosophy
A survey of the ethical theories debated by philosophers in Classical Greece and Rome. Plato, Aristotle, Stoics, Epicureans and Pyrrhonists Sceptics offer competing answers to the fundamental question raised by Socrates: How are we to live? That is, what is the best life for a human being? These philosophers generally agree that virtue is an important part of the best human life, but disagree about whether it is the greatest good (Epicurus, for example claims that pleasure is the highest good), or whether there are any other goods (for example, health, wealth, family). Much attention is paid in their theories to accounts of the virtues of character, and to the place of wisdom in the best sort of human life.

Taught by: Meyer
Course usually offered in spring term
Also Offered As: PHIL 211
Activity: Seminar
1 Course Unit

CLST 217 Periclean Athens
Athens in the 5th Century BCE is often viewed as a high point of human civilization. We will assess this claim by looking at the period's cultural achievements (in such areas as drama, architecture, and oratory) within their social and political contexts. Topics for discussion include: the structure and workings of the Athenian democracy; the interplay between pro-democratic and anti-democratic positions in Athenian political life; the connections between democracy and imperialism; conceptions of citizenship and relations between citizens and non-citizens (women, slaves, and resident foreigners); the role of the law courts in both dispute resolution and elite competition; sexual politics; and the civic significance of religious ritual.
Taught by: MURNAUGHAN
Course not offered every year
Also Offered As: ANCH 217
Activity: Seminar
1 Course Unit
CLST 220 Greek Art and Artifact
This course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th BCE up to the 2nd centuries BCE reaching the Age of Alexander and the Hellenistic Kingdoms. Our objects range from public sculpture and painting on and around grand buildings and gardens, to domestic luxury arts like jewelry, cups and vases, mosaic floors, and the humber objects of worship and every-day life. Greek addressed heroic epic, religious and political themes, engaged viewers’ emotions, and served mundane as well as monumental aims. Current themes include Greek ways of looking at art and space, and ideas of invention and progress; the roll of monuments, makers and patrons in Greek society; and connections with the other cultures that inspired and made use of Greek artists and styles. To understand ancient viewers’ encounters, you will meet the spaces of sanctuary and tomb, house and city, garden and private collection; your readings will sample ancient peoples’ art writing. Diverse approaches introduce art historical aims and methods, and their relationships to archaeology, anthropology and other disciplines – also to modern kinds of museums, not least our own University Museum of Archaeology. No prerequisites. This course fulfills the ‘global requirement’. Of interest to students of classical, middle-eastern, visual and religious studies, anthropology, history, communications and the GSD programs.
Taught by: Kuttner
Course usually offered in fall term
Also Offered As: AAMW 625, ARTH 225, ARTH 625
Activity Lecture
1 Course Unit

CLST 221 Hellenistic and Roman Art and Artifact
An intensive introduction to the art and architecture of Rome and her empire from Republican and later Hellenistic to Constantinian times. Variable emphasis on topics ranging from major genres, styles, and programs of commemorative and decorative art, historical narrative, and political iconography to building types and functions and the specific Etrusco-Roman notion of space, land division, and city planning.
Taught by: Kuttner
Course usually offered in spring term
Also Offered As: ARTH 226, ARTH 626
Activity Lecture
1 Course Unit

CLST 223 Ages of Homer: An Archaeological Introduction to the Greek Bronze and Iron Ages
This illustrated lecture course surveys the prehistory and early history of the Greek world through texts and material remains, with the aim of bringing to life the society, economy, and politics of this ancient era. Among the topics are the rise and fall of the great Bronze Age civilizations of the Aegean area, the Minoans of Crete and the Mycenaeans of the Greek mainland; the cataclysmic volcanic eruption on the island of Thera and its long-term consequences; the possibly historical Trojan War; the Homeric world of the Dark Age that followed the collapse of the Mycenaean palaces; and the Greek renaissance of the eighth century B.C.: including the adoption of the alphabet, the great colonizing movement, and the Panhellenic sanctuaries that laid the foundation for the Classical world to come. Ages of Homer is part of a sequence of introductory courses on the archaeology of the Greco-Roman world, which also includes Introduction to Greek Archaeology (CLS 275) and Introduction to Roman Archaeology (CLS 274). There are no prerequisites, and these courses need not be taken in a particular order.
Taught by: Tartaron
Course not offered every year
Activity Lecture
1 Course Unit

CLST 227 Age of Caesar
A course on Roman culture and society in a period of tumultuous political change, the lifetime of Julius Caesar (100-44BCE). Focuses on the interplay between shifting political and military realities and developments in social organization and literary production at Rome and in the wider Mediterranean world. The reception of Caesar in later ages will also be considered. Readings (all in translation) will include Catullus, Cicero, Lucretius, Plutarch, Sallust, Suetonius, and, of course, Caesar himself.
Taught by: Damon
Course not offered every year
Activity Seminar
1 Course Unit

CLST 228 Excavating Ancient Cities: Troy and Gordian
The instructor has spent the last 30 years excavating the Turkish sites of Troy and Gordian, the latter of which has been explored under Penn sponsorship. The former was famous in antiquity as the site of the Trojan War; the latter served as the capital of the Phrygian Kingdom, ruled by Midas. Both of these are multi-period sites, with nine settlements built above each other during more than four millennia, and determining the chronology and appearance of each settlement has consistently been controversial. In this course we will examine the history of both sites, focusing on the problems of archaeological interpretation. Students will be placed in the position of the archaeologist and charged with re-interpreting the existing archaeological evidence.
Taught by: Brian Rose
Activity Lecture
1 Course Unit

CLST 251 Greek and Roman Universe
This course covers the history of Greek and Roman exploration and mapping of the earth and the cosmos from the Bronze Age to Late Antiquity, together with advances in timekeeping and the measurement of time. Readings include poetic, historical, and scientific texts.
Taught by: Farrell
Course not offered every year
Activity Seminar
1 Course Unit
CLST 267 The Ancient Novel
The ancient Greek and Roman novels include some of the most enjoyable and interesting literary works from antiquity. Ignored by ancient critics, they were until fairly recently dismissed by classical scholars as mere popular entertainment. But these narratives had an enormous influence on the later development of the novel, and their sophistication and playfulness, they often seem peculiarly modern—or even postmodern. They are also an important source for any understanding of ancient culture or society. In this course, we will discuss the social, religious and philosophical contexts for the ancient novel, and we will think about the relationship of the novel to other ancient genres, such as history and epic. Texts to be read will include Lucian’s parodic science fiction story about a journey to the moon; Longus’ touching pastoral romance about young love and sexual awakening; Heliodorus’ gripping and exotic thriller about pirates and long-lost children; Apuleius’ Golden Ass, which contains the story of Cupid and Psyche; and Petronius’ Satyricon, a hilarious evocation of an orgiastic Roman banquet.
Taught by: Wilson
Course not offered every year
Activity: Seminar
1 Course Unit

CLST 268 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the new Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: Kassabaum, Monge, Moore
Also Offered As: ANTH 267, ANTH 567
Activity: Lecture
1 Course Unit

CLST 271 Greek & Roman Medicine
The history of Western medicine is remarkably recent; until the nineteenth century prevailing theories of the body and mind, and many therapeutic methods to combat disease, were largely informed by an elaborate system developed centuries earlier in ancient Greece, at a period when the lines between philosophy, medicine, and what we might consider magic, were much less clearly defined than they are today. This course will examine the ways in which the Greeks, and then the Romans, conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and will juxtapose these writings with modern discourse about similar topics. We will also pay some attention to ancient pharmacology and religious healing, and will visit the Penn Museum to see their collection of ancient medical instruments. All readings will be in English and no previous background in Classical Studies is required. This course will be especially appealing (and useful) to Pre-med and Nursing students, and to students interested in the History of Science, Ancient Philosophy, and Classics.
Taught by: Rosen

CLST 300 Lies My Ancient History Teacher Taught Me
The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome’s acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 026 and/or ANCH 027.
Taught by: Cam Grey
Course not offered every year
Also Offered As: ANCH 301
Activity: Seminar
1 Course Unit

CLST 310 Ancient and Modern Constitution Making
Constitution-making reemerged as an urgent issue with the transformation of colonial empires after World War II, the collapse of the Soviet empire in 1991, and nationalist movements in the Balkans, the British Isles, and the European Union. It has remained important as competition for control of Central Asia, the Middle East, and Northern Africa has intensified. The written constitution has been bailed by some as making the vehicle for changing long established cultures, but its success has been uneven when it comes to reducing political conflict and reforming if not improving customs, character, habits, and actions. What might explain this uneven success? Is an explanation to be found by going back to what appears to be the roots of constitution-making? This course builds on contemporary scholarship to reconstruct what we may call the constitution-making tradition as it develops in the main ancient texts, which are read in English translation. The course traces this tradition through the classically trained thinkers of the Seventeenth Century, the American colonial compacts and covenants, the so-called state constitutions, and the debates in the U.S. Constitutional Convention up to recent efforts in, for example, Zimbabwe (2013) or Egypt (2014).
Taught by: Mulhern
One term course offered either term
Activity: Seminar
1 Course Unit
CLST 311 Disasters in the Ancient World
Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes, and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. In the ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals’ fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is, of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken an introductory survey course. Texts will be discussed in translation.

1 Course Unit

CLST 328 Topography and Monuments of Ancient Rome
An intensive exploration of Rome’s urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Course not offered every year
Also Offered As: AAMW 533, CLST 533
Activity: Seminar
1 Course Unit

CLST 329 Topics in Classicism and Literature
This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenistic backgrounds.
Course not offered every year
Also Offered As: ENGL 329
Activity: Seminar
1 Course Unit

CLST 332 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbarian culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be laid on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. That will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

CLST 336 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordian, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months.
Taught by: Brian Rose
Course not offered every year
Also Offered As: AAMW 536, ARTH 421, NELC 121, NELC 521

1 Course Unit

CLST 337 Iliad
Homer’s Iliad presents a dark and difficult vision of the world, but one that nonetheless inspires. Casual cruelty, divine caprice, and savage violence test heroes and lesser folk and provoke a reckoning with the stark realities of both human vulnerability and capability. It inspires kind of terror, but still also somehow provides a kind of comfort, albeit one whose character seems almost beyond comprehension. By a close and careful reading of Homer’s text, along with some reflections and readings drawn from more contemporary wars, including the current ones, we will try to examine these issues with one eye on the past and one on the present. Our goal will be to achieve some further understanding of war and human experience. This course will be offered online.
Taught by: Struck
Course usually offered summer term only
Also Offered As: CLST 517
Activity: Seminar
1 Course Unit
CLST 338 Power & Peril: the Paradox of Monarchy Among Ancient Greeks, Romans & Jews
We imagine Ancient Greece and Rome as the cradles of democracy and republicanism, the early Juea as pious theocracy, but the evidence tells us that monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). Despite their ubiquity, the King was a polarizing figure in reality and in conception. On the one hand, some idealized the monarchy as the ideal leader, and monarchy provided the language with which to describe and even imagine the very godsthat on the other, monarchs were widely reviled in both theory and practice, from the Greek tyrant to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal ruler and the worst form of government. This class confronts the paradox of the King.

1 Course Unit

CLST 339 Descent to the Underworld in Ancient Near-Eastern and Western Literature
From antiquity to the present the hero’s journey to the underworld, or the land of the dead, has offered poets and philosophers a metaphor to express our search for life’s meaning. In antiquity that meaning was to be found by an extraordinary individual in a heroic quest beyond the grave. In this course we will consider various interpretations of what the katabasis means within the context of our everyday struggle to find meaning.

CLST 341 Topics in Greco-Roman Art
Topic Varies
Taught by: Kuttner
Also Offered As: ARTH 325
Activity: Seminar
1 Course Unit

CLST 343 The Iliad and its Afterlife
As the earliest work in the western tradition, the Iliad has been a constant point of reference for later considerations of heroism, friendship, the search for meaning in the face of mortality, and the effects of war on individuals and societies. We will begin with a close reading of the Iliad in translation, with attention both to the story of its hero Achilles as he experiences disillusionment, frustration, anger, triumph, revenge, and reconciliation and to the poems broader portrait of a society at war, which incorporates the diverse perspectives of invader and defenders, men and women, old and young, gods and mortals, along with tantalizing glimpses of peacetime life. We will then consider how later writers and artists have drawn on the Iliad to present a range of perspectives of their own – whether patriotic, mock heroic, romantic, or pacifist – with particular attention to 20th and 21st century responses by such figures as W.H. Auden, Simone Weil, C.S. Lewis, David Malouf, Alice Oswald, and Adrienne Rich. There are no specific prerequisites, but the course can serve as a complement to CLST 302, The Odyssey and its Afterlife or CLST 331 Reading the Iliad in a Time of War.
Taught by: Murnaghan
Activity: Seminar
1 Course Unit

CLST 344 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approaches to the still unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.
Taught by: Struck
Also Offered As: EAS 244, INTE 344
Prerequisites: Curiosity, bravery, and a predilection for the interdisciplinary
Activity: Seminar
1 Course Unit

CLST 345 Ancient Epic Poetry
Admission to the course is by application only. This course will be a collaboration between Penn and Yale-NUS in Singapore. It involves travel to study in Singapore during Penn’s Spring Break 2019. Mira Seo, Professor of Humanities (Literature) at Yale-NUS and Peter Struck, Professor of Classics at University of Pennsylvania, will teach a shared syllabus between two seminars, one at Yale-NUS, and one at Penn. The syllabus will focus on five complete epics, Gilgamesh, the Iliad, Odyssey, Ramayana, and Aeneid, with appropriate secondary literature on each text. Class will meet on each campus independently during standard course times. In addition, we will schedule six plenary sessions via teleconference, held as additional sessions in the morning (Singapore) and evening (Philadelphia) to allow for simultaneity. In the plenary sessions, we will engage in a mix of interactive activities, including lectures, discussions, and group work. The course will pivot around two weeks at the midpoint of the semester, the last week of February (23 February-3 March, 2019) and the first week of March (3-10 March, 2019). The first is Yale-NUS’s Spring break, and that class will travel to Philadelphia and join Penn students in face-to-face class sessions, plus engage in additional ambassadorial kinds of events, in which they will explore the richness of Penn and Philadelphia, including the Penn Museum. The first week of March is Penn’s Spring break, and as Yale students return to Singapore, Penn students will fly over to meet them for a week that mirrors the Philadelphia experience, with attendance in classes, and cultural events, including the Asian Civilizations Museum. Course grades will consist in a combination of sole-authored papers and work pursued by groups drawn from both campuses and turned in as collaborative projects. These will be submitted before the face-to-face weeks, and pursued via shared blog and small group videoconferencing links. There will be money available to subvene travel expenses for students. Up to date passports are required for the course.
Taught by: Peter Struck
Activity: Lecture
1 Course Unit
CLST 360 Troy Stories: Classical Epic and Medieval Romance
In this course on ancient and medieval epic we will track the literary compulsion to return to the Trojan War. The matter of Troy provided ancient and medieval writers with a rich resource for reflections on war and violence, on the power and vulnerability of states, on personal and communal suffering, and on how history is written. We will begin with the Homeric Iliad along with other ancient Greek uses of the Trojan myth; we will read Virgil's refashioning of the Trojan story as the new beginnings of a triumphant Roman history; and then we will consider how medieval writers, including Geoffrey of Monmouth, Boccaccio, Chaucer, the Gawain-Poet, and Robert Henryson, shaped and contended with the myth of Troy. In the hands of late medieval writers, Troy becomes a literary site for the transformation of epic into the genre of romance. The course requirements will be: one ten-minute oral presentation on a research topic of your choice related to the reading, together with a short write-up of your research; one very short critical paper; and one longer research paper (which can develop the subject of your oral presentation).
Taught by: Copeland

Also Offered As: COML 304, ENGL 229, GSWS 228
Activity: Seminar
1 Course Unit

CLST 362 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracy on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: Peter Cobb
Also Offered As: AAMW 562, ANTH 362, ANTH 562, CLST 562, NELC 362
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1 Course Unit

CLST 370 Classics & American Government
Before the universities established public-service programs in the twentieth century, many Americans prepared themselves for public life by studying Greek and Latin authors in school and college. In this course, using English translations, students survey an eighteenth-century classical curriculum and trace its influence in the political activity of Madison and others who guided the development of American governmental institutions.
Taught by: John Mulhern
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CLST 396 History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). We'll move into modern and 20th century by looking at the literary (or "art") theories of some major philosophers, artists, and poets like Kant, Hegel, Shelley, Marx, the painter William Morris, Freud, and the critic Walter Benjamin. We'll end with a look at Foucault's work. The point of this course is to consider closely the Western European tradition which generated questions that are still with us, such as: what is the "aesthetic"; what is "imitation" or mimesis; how are we to know an author’s intention; and under what circumstances should literary texts ever be censored. During the semester there will be four short writing assignments in the form of analytical essays (3 pages each), and students can use these small assignments to build into a longer writing assignment on a single text or group of texts at the end of the term. Most of our readings will come from a published anthology of literary criticism and theory; a few readings will be on Canvas.

1 Course Unit
CLST 425 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In the epoch of economic and political upheaval, Rome long survived, Constantine's 'new Rome', Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition, in forms and styles: we critique art-historical models for Late Antiquity 'decline', analyze habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheistic visual survival. Foreign allies and enemies, and new peoples invading an already polyethnic Empire, interacted with Greco-Roman Late Antiquity; we visit arts of Sasanian and Islamic empires east and south, and 'barbarian' domains in Africa, Europe, Britain. Media discussed, for sacred, courtly, domestic, funerary, political and civic spaces and structures include not just 'monumental' painting, mosaic, sculpture, but also objects of silver, ceramic, ivory, figural textile, glass; painted books, jewelry; mass-media artifacts like coins and pilgrimage tokens. We also study Late Antique texts on art, objects, space and viewership.

CLST 500 Materials and Methods, proseminar in CLASSICAL STUDIES AND ANCIENT HISTORY
This is the required proseminar for first year graduate students in classical and ancient history. It will introduce you to some key methodological, practical and theoretical tools for beginning a scholarly career in these fields.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CLST 503 Historical Grammar of Greek
Investigation of the grammar of Classical Greek from the viewpoint of historical linguistics. The course will offer historical explanations for numerous structural peculiarities of the Greek language and anomalies of Greek grammar, touch on the relationship of Greek with other languages, and incidentally introduce the student to some basic concepts of language analysis likely to be useful in teaching Greek and learning other languages.
Taught by: Ringe
Course not offered every year
Prerequisite: A fluent reading knowledge of ancient Greek
Activity: Seminar
1 Course Unit

CLST 517 MLA Proseminar: Reading the Iliad in an Age of War
Homer's Iliad presents a dark and difficult vision of the world, but one that nonetheless inspires. Casual cruelty, divine caprice, and savage violence test heroes and lesser folk and provoke a reckoning with the stark realities of both human vulnerability and capability. It inspires kind of terror, but still also somehow provides a kind of comfort, albeit one whose character seems almost beyond comprehension. By a close and careful reading of Homer's text, along with some reflections and readings drawn from more contemporary wars, including the current ones, we will try to examine these issues with one eye on the past and one on the present. Our goal will be to achieve some further understanding of war and human experience. This course will be offered online.
Taught by: Struck/Reinhardt
Also Offered As: CLST 337
Activity, Seminar
1 Course Unit

CLST 521 Topics in Greek and Roman Art
Topic Varies. Please check website for more details. Fall 2018: "Roman Provincial Art" is a very active scholarly category: we test how it might be productive, sampling visual culture outside the empire's Italian heartland from the Late Republic into Late Antiquity. Rome's arts were always in dialogue with those of neighboring cultures; imperialist expansion into the Mediterranean world and beyond meant that cultural relations across many boundaries—social, ethnic, territorial—potentially became cultural politics. Of related interest are relationships between visual and material culture within the Roman world's formal boundaries, in proto-global and imperial contexts, and those of peoples along and beyond those frontiers. (In Late Antiquity some of them took up rule within the old imperial boundaries, and came to cultural terms with their new lands.) "Style" is a fraught issue: what does attributed crudeness in regional practice add up to, and what were the aims of apparently trans-Mediterranean forms of display? Do "arts" engage identity formation, enforced or discrepant viewing?
Taught by: Kuttner
Course not offered every year
Also Offered As: AAMW 525, ARTH 525
Prerequisites: No prerequisite. Open to advanced undergraduates with permission of the instructor.
Activity: Seminar
1 Course Unit
CLST 525 Material & Methods in Mediterranean Archaeology
This course is intended to familiarize new graduate students with the collections of the University of Pennsylvania Museum of Archaeology and Anthropology and the wide range of scholarly interests and approaches used by faculty at Penn and neighboring institutions, as well as to provide an introduction to archaeological methods and theory in a Mediterranean context. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into five sections: Introduction to the Mediterranean Section; Collections; Method and Theory in Mediterranean Archaeology; Museum Work; and Ethics. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.
Taught by: Tartaron
Course usually offered in fall term
Also Offered As: AAMW 526
Activity: Seminar
1 Course Unit

CLST 532 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 500 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as in their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process; several streams of the changing theoretical and conceptual approaches to Greek colonization are explored. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading and reports. Seminar meetings will consist of oral reports and discussion of these reports and other topics. Depending on the number of participants, each person will be responsible for two or three reports of approximately 30-45 minutes length. Accompanying the oral report will be a PowerPoint document (in most cases), a synopsis/summary of one to two pages, and a bibliography. These will all be posted on the course Canvas site. No later than one week before an oral presentation, the presenter will identify one or two key readings for all to read, in consultation with the instructor. These will be posted, in PDF format, on the Canvas site. One or more visits to the Penn Museum may be built into the course.
Taught by: Tom Tartaron
Course not offered every year
Also Offered As: AAMW 519
Activity: Seminar
1 Course Unit

CLST 533 Topog & Mon of Anc Rome
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.
Course not offered every year
Also Offered As: AAMW 533, CLST 328
Activity: Seminar
1 Course Unit

CLST 541 Plato and Aristotle in the Renaissance
Course not offered every year
Also Offered As: ITAL 540
Activity: Seminar
1 Course Unit

CLST 562 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: Peter Cobb
Also Offered As: AAMW 562, ANTH 362, ANTH 562, CLST 362, NELC 362
Prerequisite: Prior archaeological coursework and/or experience preferred
Activity: Lecture
1 Course Unit

CLST 568 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the new Center for the Analysis of Archaeological Materials (CAAM) and is taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.
Taught by: Kassabaum, Monge, Moore
Also Offered As: ANTH 267, ANTH 567, CLST 268
Activity: Lecture
1 Course Unit

CLST 598 Language Pedagogy Workshop
The Workshop is intended to serve as a forum for first-time teachers of Latin or Greek. This will include discussing course-plans and pedagogical theories and strategies, collaborating on course materials, and addressing any concerns in the language courses presently being taught.
Taught by: James Ker
Activity: Seminar
1 Course Unit

CLST 600 Graduate Seminar
Topics will vary
One term course offered either term
Activity: Seminar
1 Course Unit
CLST 611 Greek Epigraphy: Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his "Ancient Economy" have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.
Taught by: Bowes
Course not offered every year
Also Offered As: AAMW 611, ANCH 611, GREK 611
Activity: Seminar
1 Course Unit

CLST 616 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his The Ancient Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy.

1 Course Unit

CLST 618 Medieval Poetics
This is a comparative course on medieval stylistic practices, formal innovations, and especially theories of form. Our common ground will be the theories that were generated in learned and pedagogical traditions of medieval Latinity (with their roots in ancient thought about poetic form). We will also collaborate on the particulars of the European vernacular cultures that stamped their interests on the interplay of language, genre, and form. Questions common to all the literary traditions may be the social, ethical, and epistemological roles of poetry. Other common questions include the distinctively medieval terms of interpretive theory and practice; technologies of interpretation; theories of fiction (fabula); the histories of the language arts; transformations of the terminology of figurative language; grammatical orthopraxis and permitted deviation; and material texts. As we turn from interpretive to generative categories, we will consider how arts of poetry find their linguistic and stylistic focus in the vocabularies of individual vernacular traditions.
Taught by: Rita Copeland
Course not offered every year
Also Offered As: COML 601, ENGL 524
Activity: Seminar
1 Course Unit

CLST 622 Gloss & Commentary
Activity: Seminar
1 Course Unit

CLST 698 Prospectus Workshop
Designed to prepare graduates in any aspect of study in the ancient world to prepare for the dissertation prospectus. Course will be centered around individual presentations and group critique of prospectus' in process, as well the fundamentals of large-project research design and presentation.
Taught by: Bowes
Course usually offered in spring term
Also Offered As: AAMW 698
Activity: Seminar
1 Course Unit
Notes: Graduates only

CLST 700 Geoaarchaeology
Activity: Lecture
1 Course Unit

CLST 705 Ethnoarchaeology Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analogy, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers.
Taught by: Tartaron
Course not offered every year
Also Offered As: AAMW 705
Activity: Seminar
1 Course Unit

CLST 706 Archaeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Penn Museums Mediterranean Section.
Taught by: Brian Rose
Also Offered As: AAMW 706, ARTH 706
Activity: Seminar
1 Course Unit

CLST 707 Topics in Aegean Archaeology
Topics vary. This course explores current topics in Aegean archaeology. It is designed to inform and prompt debate and discussion on substantive, methodological, and theoretical matters of current interest, within a geographical and/or chronological framework. Spring 2017 topic TBA.
Taught by: Tom Tartaron
Also Offered As: AAMW 707
Activity: Seminar
1 Course Unit
Notes: Undergraduates require permission of instructor
CLST 711 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries. Taught by: C. Brian Rose
Also Offered As: AAMW 726, ARTH 726
Activity: Seminar
1 Course Unit
Notes: Graduates Students Only

CLST 715 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey. The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dörpfeld, and Blegen also be considered. The course will cover a broad chronological span—from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend. Taught by: Rose
Course not offered every year
Also Offered As: AAMW 715
Activity: Seminar
1 Course Unit

CLST 720 Topics in Aegean Art
Fall 2018: The choices made by groups of people with regard to the treatment of their dead can be reflective of a society's beliefs and social structure. In this course, we will examine the burial traditions of the people of the Prehistoric Aegean from the Neolithic through the end of the Bronze Age, circa 7,000-1,100 BCE. We will focus on burial architecture, grave goods, burial rituals, mortuary variability, and the symbolic meaning of death and burial in Prehistoric Greece. Particular attention will be paid to recent discoveries on Crete, the Mainland, and the Cycladic islands. Students will write two papers, and these papers will be presented to the class. The first paper will be circa 15 pages long with footnotes, bibliography, and images (presented via powerpoint) and the second will be a 20-25 page paper with footnotes, bibliography, and images presented via powerpoint. Taught by: Shank

Cognitive Science (COGS)

COGS 001 Introduction to Cognitive Science
Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce undergraduates from many areas to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between them. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Taught by: Brainard/Ungar
Course usually offered in fall term
Also Offered As: CIS 140, LING 105, PSYC 207
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

COGS 298 Human Computer Interaction

1 Course Unit

COGS 301 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

COGS 398 Senior Thesis
This course is a directed study intended for cognitive science majors who have been admitted to the cognitive science honors program. Upon admission into the program, students may register for this course under the direction of their thesis supervisor.
One term course offered either term
Activity: Independent Study
1 Course Unit

College (COLL)

COLL 135 The Art of Speaking
This course is designed to equip students with the major tenets of rhetorical studies and peer education necessary to work as a CWIC speaking advisor. The course is a practicum that aims to develop students' abilities as speakers, as critical listeners and as advisors able to help others develop those abilities. In addition to creating and presenting individual presentations, students present workshops and practice advising. During this ABCS course, students will practice their advising skills by coaching and mentoring students at a public school in Philadelphia.
Taught by: Weber
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: Students need to apply and are interviewed by the instructor and Associate Director of CWIC
Communications (COMM)

COMM 123 Critical Approaches to Popular Culture
Popular culture has been variously dismissed as mere trivia, “just entertainment;” it has been condemned as propaganda, a tool of mass deception; and its consumers have been dubbed fashion victims and couch potatoes. This course considers these critiques, as well as those that suggest that popular culture offers valuable material for the study of social life. We will consider the meanings and impact of popular culture, including its effects on how we see ourselves, others, and American life; who makes distinctions between high, middlebrow, and low or mass culture; and how power and resistance structure the production and consumption of popular texts.
Taught by: Paxton  
Course usually offered in spring term
Activity: Lecture
1 Course Unit

COMM 125 Introduction to Communication Behavior
This course introduces students to the theoretical models and research methods used to study communication and behavior, with a focus on mass media processes and effects. Topics examined include: the social construction of meaning through communication, effects of media violence, children’s responses to educational television, the political impact of the news, and the influence of social media on relationships, and the role of media in creating and perpetuating gender, racial, and ethnic stereotypes. The aim of the course is to provide students with (1) a general understanding of research on attitudinal and behavioral aspects of mediated and interpersonal communication, and (2) the basic conceptual tools needed to critically evaluate the assumptions, theories, and empirical evidence supporting conclusions about communication behavior and media effects. Toward this end, thought the paradigms of critical and cultural studies will be reviewed briefly, the class will focus on social scientific approaches to understanding communication behavior.
Students have the option of producing a multi-media capstone project or writing a term paper on a communication behavior-related topic of their choice. This class meets twice a week (WF) as a lecture and once a week (M) in smaller group seminars.
For BA Students: Society Sector  
Course usually offered in fall term
Activity: Lecture
1 Course Unit

COMM 130 Media Industries and Society
The aim of this course is to prepare you to work in the media business as well as to be an informed citizen by acquainting you with the work and language of media practitioners. The class also investigates the exciting, and (to some employed there) scary changes taking place in the news industry, the advertising industry, the movie industry, and several other areas of the media system. In doing that, the course ranges over economic, political, legal, historical, and “cultural” considerations that shape what we see when we go online, use social media, watch TV, read books, play video games, and more. You’ll never look at media the same again.
For BA Students: Society Sector  
Taught by: Turow  
Course usually offered in spring term
Activity: Lecture
1 Course Unit

COMM 203 Media, Culture & Society in Contemporary China
This course studies contemporary Chinese media, culture, and society in the context of globalization. Major topics include Internet expression and censorship, mass media commercialization, entertainment media, middle class and consumerism, environmental degradation, new forms of inequality, and civil society and popular protest. Taking a sociological approach, this course introduces methods and theories for analyzing media, institutions, inequality, and social change.
Taught by: Yang  
Course not offered every year
Also Offered As: SOCI 238  
Activity: Lecture
1 Course Unit

COMM 209 Urban Communication
How cities communicate has had to evolve with the times and circumstances. Even as there is extraordinary optimism about the future of America’s cities, most continue to grapple with the devastating effects of 20th century deindustrialization and racial disparities in education, income, housing, and health and unplanned crisis. It has become the task of municipal leadership to both balance the demands of disparate interests, govern fairly and effectively and communicate to various constituency about policy and government’s role. In the age of social media that perpetuates a 24/7 news cycle, municipal governments and their leadership have had to respond to queries, concerns and circumstances while governing, all in new ways. Using personal experiences from serving 4 US Big City Mayors, I will provide examples about how cities have had to communicate through the varying levels of leadership during times of crisis.
Taught by: Peterkin-Bell  
Course usually offered in spring term
Activity: Lecture
1 Course Unit

COMM 210 Quantitative Research Methods in Communication
This course is a general overview of the important components of social research. The goal of this class is to understand the logic behind social science research, be able to view research with a critical eye, and to engage in the production of research. The first third of the semester focuses on defining research problems, research design, and assessing research quality. We cover such topics as sampling, measurement, and causal inference. These topics are then illustrated through reviews of two research areas: survey research and content analysis. The last third of the semester focuses descriptive and inferential statistics, measures of association for categorical and continuous variables, and the basic language of data analysis. For those classes, we make use of STATA, a program useful for learning statistics. Most modules are illustrated through lectures, class exercises, reading published scientific articles, and discussing research featured in the news.
Taught by: Bleakley  
Course usually offered in fall term
Activity: Seminar
1 Course Unit

2018-19 Catalog | Generated 02/28/19
COMM 211 Media Activism Studies
This seminar provides an introduction to the politics and tactics underlying various types of media activism. The class will examine interventions aimed at media representations, labor relations in media production, media policy reform, activists’ strategic communications, and “alternative” media making. The course will draw from an overview of the existing scholarship on media activism, as well as close analyses of actual activist practices within both old and new media at local, national, and global levels. We will study how various political groups, past and present, use media to advance their interests and effect social change. Each member of the class will choose one case study of an activist group or campaign to explore throughout the semester.
Taught by: Pickard/Various
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 213 Social Media and Social Life
The eruption of social media as a means of communication has been said to transform many dimensions of social life, from how we interact with significant others to how we engage in public life—has it, really? Regardless of the specific technology (blogs, micro-blogs, social networking sites, peer-to-peer networks), social media make interdependence more prevalent, and exposure to information more pervasive. But social networks, and the ties that bring us together, have long mediated the way in which we obtain information, engage in public discussion, and are recruited or mobilized for a public cause. So what has social media brought to the table that is new? This course will evaluate the evidence that can help us answer this question, as well as challenge conventional views and discuss questions that remain open. The effects of social media on ideological polarization, social influence and peer pressure, agenda-setting dynamics, and the formation and effects of social capital are examples of the substantive topics and theoretical debates that will be considered.
Taught by: Gonzalez-Balbin
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 217 New Media and Politics in the Time of Trump
New media always have been the keys to American politics. Every era-changing president was the first to master a new medium: from Lincoln (telegraph) and FDR (radio), to JFK (broadcast television) to Obama (Facebook) and now Trump (Twitter). We will study traditional forms for context, but focus on the cutting-edge digital/social news gathering and distribution, examining the journalistic benefits and risks of several newer forms. These include broad-based agnostic platforms, ideologically-tailored websites, social video apps, podcasts and comedy-as-news. The course also will feature guests from across all sectors. Our core mission is to assess whether the latest revolution in media encourages or impedes the survival of self-government in America, where the Founders had hoped that a free press would inform the citizenry—and not merely incite anger, division and fear.
Taught by: Fineeman
Activity: Lecture
1 Course Unit

COMM 218 Social Media, Social Data
What are social data and how can we critically, ethically and effectively capture, analyze and use them? During this course, students will gain a well-grounded theoretical understanding of social media combined with practical, hands-on experience in capturing and analyzing their own sets of social data. The first part of the course provides an overview of the history of social media, then looks at how practices and platforms vary across the world. Students will also discuss current issues related to social data and questions of ethics and intellectual property as they apply to a number of contexts. The second part of the course delves into capturing and analyzing social data using a wide array of techniques and platforms. Students will gain hands-on experience and a valuable toolkit for data analysis that will allow them to apply the course material to real world problems of their choosing.
Course usually offered summer term only
Activity: Lecture
1 Course Unit

COMM 225 Children and Media
This course examines children’s relationship to media in its historic, economic, political, and social contexts. The class explores the ways in which “childhood” is created and understood as a time of life that is qualitatively unique and socially constructed over time. It continues with a review of various theories of child development as they inform children’s relationship with and understanding of media. It next reviews public policies designed to empower parents and limit children’s exposure to potentially problematic media content and simultaneously considers the economic forces that shape what children see and buy. The course concludes with a critical examination of research on the impact of media on children’s physical, cognitive, social, and emotional development. Students in this course produce a prototype for an educational children’s media property as their capstone project.
Taught by: Woolf
Course not offered every year
Activity: Lecture
1 Course Unit

COMM 226 Introduction to Political Communication
This course is an introduction to the field of political communication, conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates’ and office-holders’ uses of news. The focus of this course is on the interplay in the U.S. between traditional and social media and politics. The course includes a history of televised campaign practices from the 1952 presidential contest through the election of 2016.
Taught by: Jamieson
Course usually offered fall term
Also Offered As: PSCI 232
Activity: Lecture
1 Course Unit

COMM 230 Advertising and Society
This course explores the historical and contemporary role of the advertising industry in the U.S. media system. The course will cover the social history of advertising; the structure of today’s advertising industry; the workings of advertising in digital media; and critical analyses of advertising’s role in society. In addition to academic writings, the class will read industry reports to understand contemporary strategies and processes.
Taught by: Turow
Course not offered every year
Activity: Lecture
1 Course Unit
COMM 237 Health Communication  
An examination of the influence of public health communication on health behavior. The course will consider: intervention programs addressing behaviors related to cancer, cardiovascular disease, HIV/AIDS, drug use, obesity and others; theories of health behavior change; issues in the design of effective health communication programs; concerns about the portrayal of health and medicine on mass media.  
Taught by: Homik/Staff  
Course not offered every year  
Activity: Lecture  
1 Course Unit

COMM 243 Ethnography and Media for Social Justice  
How do qualitative social scientists study urban communities? What kinds of powerful tales can be told about urban lifestyles and social issues in places like Philadelphia? This course will allow students to study various ethnographic treatments of urban communities in the United States, using films, articles, TV series, and books as guides for the framing of their own independent research on the streets of Philadelphia. Students will also form production teams of two or three people, and these production teams will be responsible for (i) identifying and researching an important urban issue in contemporary Philadelphia and (ii) turning that research into a 15-30 minute video documentary or podcast. Mixing video/audio journalism with ethnographic methods will enhance their skills at archival and social research, from participant observation and interviewing techniques to sound editing and production. This course is intended to be a rigorous and exciting opportunity for students to tell empirically grounded stories using the voices of their participants and the sounds of the city.  
Taught by: Lingel  
One term course offered either term  
Activity: Seminar  
1 Course Unit

COMM 245 Teens and Screens: Understanding Youth Media Behavior  
Why do screen media and digital technologies captivate youth? In this course we address this question by examining the role media play in adolescent development and behavior. We begin by considering adolescence as a unique period of psychological and social development and discussing emerging adults as a special population. Next, we will explore how adolescents use and interact with media and how their media preferences are related to their developmental needs, with particular attention to social media use and media content targeted to, and popular with, adolescent audiences. Finally, we will investigate how media influence adolescent self-identity and behavior by reviewing media effects in areas of sex, violence, gender norms, and friendship quality. The strength of the evidence for media effects and its behavioral and policy implications will be presented and debated within each area of study. Relevant theoretical perspectives will inform these discussions. Throughout the semester students will critically reflect upon current empirical research while also spotlighting different media: TV shows, social media apps (e.g., Yik Yak) and social movements (e.g., #iammorethanadistraction).  
Taught by: Bleakley  
Course usually offered in fall term  
Activity: Seminar  
1 Course Unit

COMM 262 Visual Communication  
Examination of the structure and effects of visual media (film, television, advertising, and other kinds of pictures).  
Course not offered every year  
Activity: Lecture  
1 Course Unit

COMM 270 Global Digital Activism  
This seminar examines the forms, causes, and consequences of global digital activism, defined broadly as activism associated with the use of digital media technologies (e.g., Facebook, Twitter, mobile phones, and the Chinese Weibo). The goal is to provide students with a theoretical toolkit for analyzing digital activism and to develop a critical understanding of the nature of contemporary activism and its implications for global social change. Major cases to be examined include the "Occupy Wall Street" movement in the US, the Arab Spring, the "indignados" protests in Spain, and internet activism in China. Students are required to conduct primary, hands-on research on a contemporary case (or form) of digital activism and produce a final research paper. This research project may be done individually or in small groups.  
Taught by: Yang  
Course not offered every year  
Activity: Seminar  
1 Course Unit

COMM 275 Communication and Persuasion  
Theory, research and application in the persuasive effects of communication in social and mass contexts. Primary focus on the effects of messages on attitudes, opinions, values, and behaviors. Applications include political, commercial, and public service advertising; propaganda; and communication campaigns (e.g. anti-smoking).  
Taught by: Cappella/Staff  
Course usually offered in spring term  
Activity: Lecture  
1 Course Unit

COMM 282 Sick and Satired - The Insanity of Humor and How it Keeps Us Sane  
The goal of this course will be to prove definitively how and why humor, as both an instigator and peacemaker, might be considered one of the most influential and profoundly useful forms of communication devised by human beings. The unique ability of jokes and satire to transcend familiar literary and journalistic forms for the purpose of deepening (or cheapening) socio-philosophical arguments and to inspire (or discourage) debate and participation in public conversations about innumerable political and social issues will be explored. The fearless analytical nature of both high and lowbrow comedy will be examined, as well as its deflective qualities, and the corollary constricted from humor's dissection of straight society's monomaniac will be inspected and tested for cohesion and viability. Additionally, the course will teach students to recognize and assert, through informed justification based on both contemporary and historical examples, the indispensability of the political and cultural satirist's unique role in society as a witness, a predictor and, in some circumstances, an instigator of public and private debate conceived and exercised for the purpose of revealing and mediating differences between disparate groups based not solely on language differences, but also on social status, political affiliation, cultural identity, ethnicity, gender, religious fellowship, sexual orientation and socio- economic caste.  
Taught by: Booth  
Course usually offered in fall term  
Activity: Lecture  
1 Course Unit
COMM 290 Special Topics in Communication
This is an intermediate level special topics course that covers varying topics in communication. For more information about the course, please see: https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Tought by: Various Instructors
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 292 WARNING! Graphic Content - Political Cartoons, Comix and the Uncensored Artistic Mind
This course examines the past, present and future of political cartooning, underground comix, graphic journalism and protest art, exploring the purpose and significance of image-based communication as an unparalleled propagator of both noble and nefarious idea. The work presented will be chosen for its unique ability to demonstrate the inflammatory effect of weaponized visual jokes, uncensored commentary and critical thinking on a society so often perplexed by artistic free expression and radicalized creative candor.
Tought by: Booth
Course usually offered in fall term
Activity: Lecture
1 Course Unit

COMM 294 Chicks and Cyborgs: Gender, Technology and Culture
Information and communication technologies (ICT) are powerful tools of connectivity and social change, but they also contain embedded ideological tensions that can produce inequalities and deepen intergroup disparities. At the core of this class is a sustained analysis of the effects of gender on the development and use of ICT. Drawing on a range of theories for communication, gender, information, media, sexuality and technology, this course helps students understand feminist critiques of science and technology; develop critical analyses of public policies that have consequences; identify barriers to the recruitment and retention of historically marginalized groups in the technology industry; and understand frameworks for thinking about communication technologies as shaping everyday life.
Tought by: Lingel
Course not offered every year
Activity: Lecture
1 Course Unit

COMM 300 Public Space, Public Life
Public space as a mediated system of communication anchored in embodied practice. Historical aspects, public space as a cultural signifier, how the organization and regulation of collective spaces facilitates and enriches or hinders common life, public space as a critical component of democracy.
Tought by: Marvin/Staff
Course usually offered in spring term
Activity: Seminar
1 Course Unit

COMM 301 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Tought by: Pickard/Various
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 307 Communication, Sports, and Social Justice
This course will examine the current relationship between sports, celebrity and the power to communicate for social justice. Through case studies, review of current events, and empirical evidence from experience, students will learn to evaluate the patterns and strategies that athletes have employed to elevate an issue. This course will pull from hot button moments in our current landscape from athletes protesting against racial inequality to the sports leagues' communication challenges to publicly address those concerns. There will be a review of the pioneering efforts that were successful, unsuccessful, or to be determined. Our studies will develop a critical eye for communication approaches and how well those tactics yield the desired changes. We will draw upon this insight to formulate ways to improve communication and determine the most influential and effective practices to date.
Tought by: Glanville
Activity: Lecture
1 Course Unit

COMM 310 The Communication Research Experience
In this hands-on course students will work with active researchers in the Communication Neuroscience lab at Penn to gain experience in how research works. Research topics will depend on student interests, with emphasis on one or more of the following: social influence and persuasion, health communication, peer influence in teens, mobile technology, social media, emotion regulation, peace and conflict resolution, mindfulness, interpersonal communication, political communication, adolescent brain development, communication neuroscience. Students will have the opportunity to interact closely with a mentor and will gain experience conceptualizing research questions, designing experiments, collecting data, and making an analysis plan.
Tought by: Falk
Course not offered every year
Prerequisites: COMM 210 (Communication Research Methods) or permission of the instructor.
Activity: Seminar
1 Course Unit
COMM 311 Peace Communication
When 'me' and 'you' becomes 'us' and 'them', a suite of psychological processes are amplified or come online. In this course, we will examine the forces that drive people to engage in intergroup conflict through the lenses of evolutionary biology and psychology, and then examine the effectiveness of communications-based interventions at easing conflict. In the first part of the course, we will learn about the theoretical work on intergroup psychology; in the second part, we will examine the specific processes that drive conflict (e.g., stereotypes, prejudice, dehumanization) and how they are measured using both explicit self-report and implicit measures (e.g., physiology, neuroimaging); in the third part, we will explore the interventions that have been demonstrated to work (and fail) to decrease intergroup conflict. No prior experience in psychology or neuroscience is required.
Taught by: Bruneau
Course usually offered in spring term
Activity: Seminar
1 Course Unit

COMM 331 Computational Text Analysis
In this 'big data' era, presidents and popes tweet daily. Anyone can broadcast their thoughts and experiences through social media. Speeches, debates and events are recorded in online text archives. The resulting explosion of available textual data means that journalists and marketers summarize ideas and events by visualizing the results of textual analysis (the ubiquitous 'word cloud' just scratches the surface of what is possible). Automated text analysis reveals similarities and differences between groups of people and ideological positions. In this hands-on course students will learn how to manage large textual datasets (e.g. Twitter, YouTube, news stories) to investigate research questions. They will work through a series of steps to collect, organize, analyze and present textual data by using automated tools toward a final project of relevant interest. The course will cover linguistic theory and techniques that can be applied to textual data (particularly from the fields of corpus linguistics and natural language processing).
Taught by: O'Donnell
Course not offered every year
Activity: Lecture
1 Course Unit

COMM 321 Big Data and Social Research
Online networks are prevalent in how we access and share information. They shape how we consume news, how we interact with friends, peers and strangers, and how we mobilize groups or try to gain the attention of large audiences. Online networks encourage dynamics of information exchange that can, potentially, be very consequential for the societies we live in or the societies we would like to build. Networked technologies have, in brief, the potential to transform governance, collaboration, and organization, and radically change how we think about regulation and policy making in the digital age. This research seminar aims to help students develop a technical understanding of how networks operate, what dynamics they are more likely to encourage, and what features limit their ability to diffuse information or spread behavior. We need to understand the logic of networks - and learn how to model their complex and counter-intuitive dynamics - before we can analyze their social impact or engineer interventions, for instance, campaigns to promote socially beneficial behavior.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 322 History and Theory of Freedom of Expression
Historical origins, purpose, theory, practice of freedom of expression in the United States. Philosophical roots of contemporary law and debates about expressive limits, especially problems associated with media of communication. Major topics include, but are not limited to traitorous and subversive speech, insulting speech and hate speech, sexual and violent expression, non-verbal expression, artistic expression.
Taught by: Marvin
Course usually offered in fall term
Activity: Seminar
1 Course Unit

COMM 323 Contemporary Politics, Policy and Journalism
A course on the modern media and its impact on government and politics. It primarily covers the post-Watergate/post-Vietnam era of journalism, the past quarter century. Each week focuses on specific topics and areas of post-Watergate journalism, as well as current press coverage of national events over the prior week. This course gives students the opportunity to interact and discuss the intersection of the press, politics, and public policy with some of the leading practitioners in the field.
Taught by: Hunt
Course usually offered in spring term
Activity: Seminar
1 Course Unit

COMM 330 The Hidden World of Privacy Policies
The US Federal Trade Commission considers privacy policies essential for internet sites and apps. Lawyers for firms with internet sites and/or apps spend much time writing privacy policies. Yet surveys show that most Americans don't read the policies—and in fact cannot understand them because of their legal jargon. Moreover, surveys indicate, most Americans don't even correctly understand what the label privacy policy means. The aim of this course will be to examine this crucial but misunderstood aspect of modern life. You will learn how to read privacy policies, how to understand their strategic business purposes within the internet industry and how to think about the implications for society when the key rules of surveillance and privacy are hidden from all but a relative few. You will also work with others in the class to create and carry out a survey of college students' understanding of privacy policies. There will be one exam and a paper related to the survey.
Taught by: Turow
Course not offered every year
Activity: Seminar
1 Course Unit
COMM 332 Survey Research and Design
Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science, communication, sociology, psychology, and statistics. Surveys are perhaps the most ubiquitous tool of measurement in the social sciences today. Successful practitioners develop expertise in the art and science of survey methodology, including sampling theory and practice, questionnaire instrument development and operationalization, and the analysis and reporting of survey data. Survey researchers are scientists of the method itself testing various practices by which surveys can be improved upon, as well as developing a keen understanding of the nature of error in surveys and how to control it. This course is a canvass course on survey research and design, highly experiential but also based upon introductory statistical theory and analysis.
Taught by: Dutwin
Course not offered every year
Also Offered As: PSCI 332
Activity: Seminar
1 Course Unit

COMM 339 Critical Perspectives in Journalism
This course aims to provide students with a critical understanding of journalism. It combines theoretical perspectives on the making of news with primary source material produced by and about journalists. Students will analyze theoretical material on journalism – about how news is made, shaped, and performed alongside articles and broadcasts appearing in the media, interviews with journalists in the trade press, and professional reviews. Topics include models of journalistic practice, journalistic values and norms, gatekeeping and sourcing practices, storytelling formats in news, and ethical problems related to misrepresentation, plagiarism, and celebrity.
Taught by: Zelizer
Course usually offered in spring term
Activity: Seminar
1 Course Unit

COMM 377 Philosophical Problems of Journalism
An exploration of the relationship between journalism and philosophy by examining particular issues in epistemology, political philosophy, ethics, and aesthetics. Among likely topics: the concept of a “fact”; the role of the press in the state; whether journalists (like doctors and lawyers) operate according to a specialized “professional” ethics; and the limits of journalism as a literary or visual genre. Course reading will include philosophical texts, breaking print journalism, and blogs that specialize in media issues.
Taught by: Romano
Course usually offered in spring term
Activity: Seminar
1 Course Unit

COMM 381 The Journalism of Social Change
From Thucydides to #METOO, journalism has been more than a pipeline for the transmission of facts. It has moral purposes, including the advancement of social justice. We will examine that crucial role in depth, from Engels’ descriptions of 19th century English factory life, through the Muckrakers in Progressive Era America, and on to 20th and early 21st century reporting that has exposed racial and gender discrimination, poverty, government corruption and authoritarianism (including conservative crusades against both) and the ravages of wars, both justified and not. We will find, explain and critique up-to-the-minute examples of this tradition in digital and social media, and ask whether and how well “new media” is upholding journalism’s moral calling.
Taught by: Fineman
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 382 Media and the Construction of Class
From Homer Simpson to Kim Kardashian, LeBron James to Jeb Bush and from Duck Dynasty to PBS documentaries on poverty, American media are filled with stories and debates about the meaning and importance of class in American life, and why people occupy the class positions they do. This course will consider some of the key patterns, assumptions, and tensions in popular media representations and explorations of class, with a focus on 21st century media. We will discuss how media portrayals reflect, and might affect, the lived experience of class and inequality in the United States.
Taught by: Shapiro
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 384 Memes, Media, and Meanings
This class covers both identity politics and media logics and their interplay in an increasingly playful and rapidly changing media landscape. Students will read a combination of media theory, feminist media theory, and cultural studies literature in the first half of the semester in order to have the theoretical grounding to conduct research paper/case studies of “media moments” that act as important markers in identity making of either individuals or groups. In the second half of the semester the class will work as a group to examine several cases from across geographical boundaries of identity making in and through media in order to discover both how identity is produced, constructed, and negotiated through media as well as how media platforms and formats interact to enable this process of identity making. Various theorists will be brought to bear to examine the framework of media industries, affordances of media platforms, and possibilities for media engagement and performance. These theories will then be deployed as part of empirical research projects through which students will discover how we engage with media and how that engagement impacts our understandings of our social locations.
Taught by: Rajabi
One-term course offered either term
Activity: Seminar
1 Course Unit
COMM 388 Ritual Communication
This course explores the significance of rituals as communicative events in contemporary American culture. We will pay particular attention to the ways in which rituals contribute to the making and re-making of social groups, be they ethnic, religious, familial, or institutional. And we will also attend to the obverse: the ways in which rituals create and perpetuate boundaries between “us” and “them” or between “appropriate” and “deviant” social behavior. Issues of race, class, gender, and sexuality will be central to our exploration of how rituals function. Over the course of the semester, we will analyze individual rites of passage—e.g., the quinceañera for example—as well as rituals that mark transitions on a far local level as well as those that most of us experience only in mediated forms. Students will conduct original ethnographic fieldwork and learn how to develop compelling research proposals.
Taught by: Paxton
Course usually offered in spring term
Activity: Seminar
1 Course Unit

COMM 390 Special Topics in Communication
This is a special topics course that covers varying topics in communication. For more information about the course, please see:
https://www.asc.upenn.edu/academics/undergraduate-program/curriculum-and-major-requirements
Taught by: Various Instructors
Course not offered every year
Activity: Lecture
1 Course Unit

COMM 393 Political Polling
Political polls are a central feature of elections and are ubiquitously employed to understand and explain voter intentions and public opinion. This course will examine political polling by focusing on four main areas of consideration. First, what is the role of political polls in a functioning democracy? This area will explore the theoretical justifications for polling as a representation of public opinion. Second, the course will explore the business and use of political polling, including media coverage of polls, use by politicians for political strategy and messaging, and the impact polls have on elections specifically and politics more broadly. The third area will focus on the nuts and bolts of election and political polls, specifically with regard to exploring traditional questions and scales used for political measurement, the construction and considerations of likely voter models, measurement of the horse race, and samples and modes used for election polls. The course will additionally cover a fourth area of special topics, which will include exit polling, prediction markets, polling aggregation, and other topics. It is not necessary for students to have any specialized mathematical or statistical background for this course.
Taught by: Dutwin
One-term course offered either term
Also Offered As: PSCI 333
Activity: Seminar
1 Course Unit

COMM 395 Communication and the Presidency
This course examines the vital aspect of communication as a tool of the US Presidency. Reading and class discussions focus on case studies drawn primarily from Presidential administrations beginning with FDR’s of the radio-televisio-internet era, studies that demonstrate the elements of successful and unsuccessful presidential initiatives and the critical factor of communication, common to both. Readings and discussion will cover the range of issues of presidential import; issues pertaining to war and peace, the drive for civil rights and equal rights, domestic prosperity and development, international leadership and issues attending the rise of an interdependent world and a global economy. The key objective and requirement of 395 is an individual paper project that centers on a presidential speech (or set of speeches) addressing a key national or international topic. Student papers are to be based in part on primary research, hence, Communications 395 is also an introduction to primary research methods and to the use of primary research materials housed in the Presidential library system.
Taught by: Eisenhower
Two terms. student may enter either term.
Activity: Seminar
1 Course Unit

COMM 397 New Media and Politics
This course seeks to trace the evolving relationship between new media technologies and political power, process, and change from multiple perspectives: the citizen/voter, the campaign, and the news media. Major theories of communication and persuasion are the foundation of this course. We will apply these theories to each of the above perspectives beginning with a brief history of U.S. political campaigns before the advent of the internet in presidential campaigns in 1996. From there we will take a deeper dive into the landscape changes brought on by new media technologies to mobilize, persuade, inform, and fundraise around the presidential campaigns since then. We will then follow how the new U.S. president and new Congress operate in this ever evolving media and digital landscape through the crucial first 100 days. Finally, we will examine issues of social media and activism, including its use as a tool for regime change, social change, and terrorism in the U.S. and around the world. New media include, but are not limited to, the internet, email, texting, blogging, social media, and “Big Data.”
Taught by: Winne
Course usually offered in spring term
Activity: Seminar
1 Course Unit

COMM 402 Arab Uprisings: Local and Global Representations
This course explores the Arab uprisings as battleground where multiple narratives battle for visibility across a variety of media platforms. We will examine local and global representations of the popular movements that have swept Arab countries since December 2010, analyzing different media, styles and modalities of representations. We will focus among other things on social media, political humor, graffiti, and the human body as instruments of communication, and focus on various related debates and polemics about the political impact of technology, the effectiveness of political satire, and the role of gender and sexuality in revolutionary politics. The overall approach of the course is critical/theoretical.
Taught by: Kraidy
Course not offered every year
Activity: Seminar
1 Course Unit
COMM 404 Media and Politics
Media and Politics will examine multiple issues specific to the past and present political media environment in the United States. Focus will be primarily, though not exclusively, on the contemporary news media (as opposed to political advertising and other marketing-oriented communications). Topics will include the rise of partisan media, selective exposure, news as entertainment, etc. Reading expectations will be relatively heavy, and under the supervision of the professor, students will be expected to write a research paper on a topic not directly a part of the course material.
Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 404
Activity: Seminar
1 Course Unit

COMM 407 Understanding Social Networks
Digital technologies have made communication networks ubiquitous; even when we can’t really notice them, they mediate most aspects of our daily activities. Networks, however, have always been the backbone of social life: long before Facebook, Twitter, Snapchat, or other similar platforms, communication created channels for information diffusion that linked people in a myriad other ways. Through letters, commerce, or simply face to face interactions, people have always been exposed to the behavior of others. These communicative ties embed us into an invisible web of influence that we can make tangible and analyze. This course will teach you how to map those connections in the form of networks, and how to study those networks so that we can improve our understanding of social life. The goal is to help you grasp the consequences of connectivity, and how small changes in the structure of our ties can lead to big differences in how networks behave.
Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Lecture
1 Course Unit

COMM 417 The Politics of Digital Media Policy
This discussion-oriented course examines key digital media policy debates and their underlying politics. We will examine policies affecting news and entertainment media, social media, telecommunications, and the Internet. Drawing from major texts across a growing sub-field, we will formulate analyses about the future trajectory of U.S. and global digital media and evaluate relevant policies in relation to democratic theory and ethical concerns. In particular, we will focus on how media policy is shaped by political processes in and outside Washington, D.C., and consider to what extent new digital media have disrupted pre-existing policy regimes. Students will choose one specific case study of a digital media policy debate to explore throughout the semester.
Taught by: Pickard
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 419 Communication, Culture & Revolution
This seminar explores revolutionary communication and cultural expression. Looking at the ongoing Arab uprisings in comparative perspective, we will examine modalities of communication through which revolutionaries express themselves, describe and attack incumbent dictators and other opponents, call for new social solidarities, and construct revolutionary political identities. Revolutionary contexts are considered as battlegrounds where multiple narratives contend for visibility. We will explore relevant debates and polemics, historical and contemporary, concerning the political impact of technology and the role of gender and sexuality in revolutionary politics. We will focus on social media, political humor, graffiti, and the human body as instruments of communication. The overall approach of the seminar is theoretical, critical and transnational.
Taught by: Kraidy
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 423 Communication and Social Influence Laboratory
Considerable resources are devoted to constructing mass media campaigns that persuade individuals to change their behavior. In addition, individuals powerfully influence one another without even knowing it. Still, our ability to design and select optimal messages and interventions is far from perfect. This course will review investigations in social and cognitive psychology and communication sciences that attempt to circumvent the limits of introspection by using biological and implicit measures, with particular focus on neuroimaging studies of social influence and media effects.
Taught by: Falk
Course not offered every year
Prerequisites: COMM 275 or a media effects or persuasion course at ASC, psych, or Wharton
Activity: Seminar
1 Course Unit

COMM 431 Is Public Opinion the Voice of the People?
Democracy relies on mechanism in which the public communicates with policy makers. This course examines the extent to which public opinion effectively represents this mechanism. We begin with historical conceptions of public opinion tracing back to ancient Athens and 18th century enlightenment thinking. We then consider the extent to which public opinion can be captured by modern day polling, or whether it only emerges after considered deliberation and discussion. We then discuss the ways in which elite rhetoric and the media move public opinion, including through the use of public opinion polls. Finally, we ask whether policymakers are actually sensitive to the voice of the people or only the voice of some of the people.
Taught by: Lekes
Course not offered every year
Activity: Seminar
1 Course Unit
COMM 439 Media Criticism
Criticism has at its core an assumption of judgment about the target or performance being evaluated. Yet whose judgment is being articulated? On which basis and authority? To which ends? And with which effects? This course examines the shape of contemporary media criticism, focusing on its meaning function in different domains of popular culture (including music, television, news, and film) and the patterns by which it is produced. Students will become acquainted with theories and ongoing debates about contemporary media criticism themselves. The course aims to sensitize students to the nuances of their own consumption of criticism and patterns by which it is typically produced. 
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 441 The Internet versus Democracy
At the turn of the 21st century, many claimed that the internet would make the world a more democratic place. Have these prophecies born out? We examine the effects the internet has had on democracy, looking at research that examines whether, for instance, the internet has increased or decreased inequality, polarization, and political participation. In addition to reading and discussing empirical literature, we will also test many of the theories in this course through hands-on workshops in data science.
Taught by: Lekes
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 453 Internet Experiments Practicum
In this hands-on course, students will work with active researchers in the Network Dynamics Group at Penn to gain experience in how research works. Research topics will depend on student interests, with emphasis on one or more of the following: network dynamics of peer influence, social media technologies, political polarization, processes of social diffusion, and social change through online networks. Students will have the opportunity to learn from leading researchers in the field of computational social science, and to participate in building their own Internet experiment. This will involve designing a research study, collecting and analyzing data, and working on a team to produce a co-authored, Internet-based experimental research study on social dynamics. Prerequisites: COMM 210 (Communication Research Methods), COMMMYY (Coursera Course, Angela has info on Title, etc.), and permission of the instructor
Taught by: Centola
Course not offered every year
Prerequisites: COMM 210 (Communication Research Methods and permission of the instructor.
Activity: Seminar
1 Course Unit

COMM 485 Globalization and the Music Video
This seminar focuses on the music video genre to explore topical and conceptual issues at the heart of the globalization of the media and cultural industries. After a formative period largely grounded in North America and Western Europe, the music video migrated to other parts of the world in the 1990s as a wave of privatization and liberalization engulfed national media systems worldwide. Based on a variety of scholarly and trade readings about the globalization of media and culture, the changing media and creative industries, and the music video genre itself, questions to be tackled include: What changes when a media form migrates from its original context? What does the content of music videos reveal about socio-economic and cultural change worldwide? How do music videos rearticulate gender and sexuality, and nationalism? What transnational circuits of ideas, images and ideologies are enabled or constrained by music video?
Taught by: Kraidy
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 491 Communication Internship
Seminar for students concurrently participating in department-approved internships in communication-related organizations. Students will develop independent research agendas to investigate aspects of their internship experience or industry. Building on written field notes, assigned readings, and classroom discussion and evaluation, students will produce final papers using ethnographic methods to describe communications within their site or industry in order to understand and critically examine their hands-on experiences.
Taught by: Haas
Two terms. student may enter either term.
Activity: Seminar
1 Course Unit

COMM 493 Independent Study
Two terms. student may enter either term.
Activity: Independent Study
1 Course Unit

COMM 494 Honors & Capstone Thesis
First semester of the two semester thesis course; completed during the fall semester of senior year. The senior thesis provides a capstone intellectual experience for Honors students and Communication and Public Service Program (ComPS) participants. Students conduct a primary research study on a communication related issue over the course of two semesters. Students should consult with and arrange for a faculty supervisor no later than the summer before senior year. Students must also file a designated form and topic statement, approved and signed by the supervising faculty member no later than the first day of class. Required of all students planning to enroll in COMM 495 or COMM 499 in the Spring. All Honors students must have a 3.5 cumulative GPA at the end of junior year for eligibility. See the Annenberg website for complete eligibility requirements.
Two terms. student may enter either term.
Activity: Seminar
1 Course Unit
COMM 495 COMPS Capstone Thesis
Second semester of two semester thesis course. Successful completion of Comm 494 is required for enrollment. The capstone thesis is a requirement for all Communication and Public Service Program participants. Students complete the primary research project started during COMM 494. For students graduating with a 3.5 cumulative GPA after completing COMM 495 with a grade of 3.7 or higher, the capstone thesis may be designated as a senior honors thesis in communication and public service.
Two terms, student may enter either term.
Prerequisites: Written proposal approved by both thesis supervisor and major chair.
Activity: Independent Study
1 Course Unit

COMM 498 Experimental Design
The main goal of this course is to familiarize students with experiments, quasi-experiments, population-based survey experiments and field experiments as they are widely used in the social sciences. By the end of the course, students will be expected to understand what it is about a study that allows for a strong causal inference. Whether one is reading about studies in a newspaper or reading academic journal articles, it is important to know how to distinguish convincing versus unconvincing evidence of any given claim. As a final project, students will be expected either to develop their own original experimental design or to analyze the evidence pertaining to a causal claim of their choosing based on what they have learned in class. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels between experimental and observational research.
Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 439
Activity: Seminar
1 Course Unit

COMM 499 Senior Honors Thesis
Second semester of two semester thesis course. Completion of Comm 494 with a grade of 3.3 or higher and a 3.5 cumulative GPA at the end of the Fall semester of senior year are required for enrollment. The Senior Honors Thesis provides a capstone intellectual experience for students who have demonstrated academic achievement of a superior level. Students complete the primary research project started during COMM 494.
Two terms; student may enter either term.
Activity: Independent Study
1 Course Unit

COMM 500 Proseminar
Introduction to the field of communications study and to the graduate program in communications. Required of all degree candidates. Open only to graduate students in communication.
Course usually offered in fall term
Activity: Lecture
0 Course Units

COMM 509 Directed Readings in Theory
In the crush of academic life, it is not always as easy to read dense theoretical texts carefully and in as much detail as we’d like. This course offers a chance to slow down, step back, and revel in the opportunity to read informing texts that address the relationship between social theory and communication. Here are texts that are often quoted; we will explore their content and place them in conversation with one another, with their interlocutors, and with ourselves. Besides lively discussion, requirements include several essays and a long-form critically annotated citation analysis of a foundational text.
Taught by: Marvin/Perl
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 522 Introduction to Communication Research
The logic of scientific inquiry and the nature of research. Hypothesis development, research design, field and laboratory observation and experimentation, measurement, interviewing and content analysis, sampling, and basic statistical analysis. Required of all degree candidates. Open only to graduate communication students.
Taught by: Delia Carpini/Hornik
Course usually offered in fall term
Activity: Lecture
1 Course Unit

COMM 525 Introduction to Political Communication
This course is designed as a PhD-level introduction to the study of political communication, and is recommended as a foundational course to be taken early in ones course of study for students interested in political communication as a primary or secondary area of research and teaching. As an introduction to the field it is structured to cover a wide range of topics and approaches, including media institutions and the effects of both mass mediated and deliberative communications. While no single course can provide comprehensive coverage of a subfield with as long and diverse a history as political communication, our hope is that you will leave this course with a strong grasp of the major theories, trends, methods, findings and debates in this area of study, as well as the gaps in our knowledge and promising directions for future research.
Taught by: Moehler
Course not offered every year
Also Offered As: PSCI 525
Activity: Seminar
1 Course Unit
COMM 530 Advertising and the Digital Age
It is impossible to understand the development of the contemporary
digital era without understanding the role played by the advertising
industry, broadly the understood. From the launch of first popular web
browsers in the mid-1990s, various forms of marketing communication
have shaped the most popular activities-from search to social to apps-
and redefined the ways companies think about individuals in society.
The aim of this course is to study these developments historically and
contemporaneously. First we will range across the history of advertising
and its related social force, consumerism, through the late 20th century.
We will next investigate the forces that guided the rise of the internet
as a commercial medium in the face of an earlier ethic that decried that
very idea. Then we will dive into the ways marketers attempt to guide the
internet and other digital media to their benefit by exploring a range of
key contemporary activities: the rise of the smartphone as a marketing
device, programmatic advertising, personalization strategies, location and
cross-platform targeting and attribution, online retailing, the responses of
brick and mortar retailers, advertisers' roles in the crating of print
media, native advertising/branded content, the rise of "influencers,"
and the transformation of "television" as a product, an activity, and an
industry. We will read industry documents and other materials to assess
how all these activities actually "work" and what drives them. Then we
will consider their societal implications through a variety of lenses,
including surveillance, privacy, pluralism, and democracy.
Taught by: Turow
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 553 Computational Social Science Research Seminar
This is a graduate research seminar in which top researchers in the field
of Computational Social Science will present cutting-edge research. Our
focus will be on deeply reading the speaker's work, and discussing in
detail their theoretical models, empirical methods, and overall scientific
contribution. Participants will also present in the seminar, which will
help to prepare them for professional presentations of their work at
conferences and job talks. This seminar will meet weekly.
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 575 Social Psychology of Communication
Contributions of social psychology to understanding communication
behavior: message systems; social cognition; persuasive
communications; attitude formation and change; face-to-face
interactions and small group situations; strategies of attributional and
communicative interpretation; mass communication effects; social
influence and networks.
Taught by: Cappella
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 594 Intro To Networks
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 609 Comparative Political Communication
This course explores major themes in the study of political
communication from a comparative perspective. It focuses on how
communication affects political behavior, attitudes, and outcomes. In
doing so we will question how different political and social institutions
shape individual-level communication effects. We also examine the roles
of mass media and interpersonal communication under different regime
types and economic systems. Finally we also ask how media systems
are influenced by political institutions. For each topic we will critically
examine the working hypotheses, methods, and evidence. The class is
designed to provide a greater understanding of comparative political
communication theories, as well as to develop social science reasoning
and methodology. The readings, class discussions, and assignments will
move back and forth between theories, empirical evidence, and public
policies. The seminar will require active student participation in class
discussions. The discussions will focus on the assigned readings for the
week, but students are encouraged to discuss additional works that are
relevant. Students must also write an original research paper, which can
hopefully become a published article. The course readings span every
major region but students are free to choose a geographic focus for their
research paper.
Taught by: Moehler
Activity: Seminar
1 Course Unit

COMM 615 Experimental Design and Issues in Causality
The main goal of this course is to familiarize students with experiments,
 quasi-experiments, survey experiments and field experiments as they
are widely used in the social sciences. Some introductory level statistics
background will be assumed, though this is a research design course, not
a statistics course. By the end of the course, students will be expected to
develop their own original experimental design that makes some original
contribution to knowledge. Throughout the course of the semester, we
will also consider how to deal with the issue of causality as it occurs in
observational studies, and draw parallels to experimental research.
Taught by: Mutz
One-term course offered either term
Also Offered As: PSCI 635
Activity: Seminar
1 Course Unit

COMM 623 Seminar on Communication, Behavior, and Health
Seminar members will critically review theory and research on
communication, behavior, and health, with the goal of suggesting
new directions that research might take. Theories of health behavior,
methodological issues in health behavior research, and strategies
to improve heath-related behaviors, including sexual risk behaviors,
physical activity, diet, and medication adherence, using a variety of
approaches will be studied.
Taught by: Jemmott
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 630 Historical Trends of Mass Communication Research
An introduction into the field of mass communication research covering
classic studies from the late 19th century through 1970s. Emphasis is
on the societal, organizational, political, and other considerations that
shaped the field.
Taught by: Turow
One-term course offered either term
Activity: Seminar
1 Course Unit
COMM 637 Public Health Communication
Theories of health behavior change and the potential role for public health communication; international experience with programs addressing behaviors related to cancer, AIDS, obesity, cardiovascular disease, child mortality, drug use and other problems, including evidence about their influence on health behavior; the design of public health communication programs; approaches to research and evaluation for these programs.
Taught by: Horik
Course usually offered in spring term
Activity: Lecture
1 Course Unit

COMM 639 Communication and Cultural Studies
This course tracks the different theoretical appropriations of "culture" and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as "cultural studies." The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.
Taught by: Zelizer
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 644 Communication and Space
Physicalized space is said to be crucial to public life. Perhaps so. But it is also critical to urbanization, globalization, modernity, mobility, social hierarchy, flow, scale, imperialism (what Said called the geography of violence), revolution, intimacy, shopping malls, simulacra, and being-in-the-world. Space is not only mediated and dialectical: it is a privileged strategy of post-modernity, "the everywhere of modern thought." So far as media go, the analytic of space implies a shift away from narrative and toward process and practice as ways of structuring experience. What are the theories that get at this? How can we use theories of space to think about media and culture, to rediscover the richness of the world? And what about the explosive iteration of screen culture that logically ought to imperil lived space but seem to offer new modes for grounding it. We will explore these themes in the relevant literatures for the purpose of developing fabulously interesting research projects, including some in visual format. No spatial pre-requisites.
Taught by: Marvin
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 660 Content Analysis
An introduction to content analysis, the analysis of large bodies of textual matter, also called message systems analysis, quantitative semantics, propaganda analysis, and (computer-aided) text analysis. The course inquires into the theories, methods, and empirical problems common to these analytical efforts: sampling, text retrieval, coding, reliability, analytical constructs, computational techniques, and inductive inference. It illustrates these problems by studies of mass media content, interview or panel data, legal research, and efforts to draw inferences from personal documents typical in psychology and literature. Students design a content analysis and do the preparatory work for an academic or practical research project. They may also use the opportunity of forging available theories into a new analytical technique and test it with available texts, or solve a methodological problem in content analysis research.
Taught by: Krippendorf
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 665 Digital Media and Social Theory
This course explores critical issues in contemporary society through the lens of digital media studies and social theory. The goal is to build constructive dialogues between digital media studies and contemporary social theory. Special attention will be given to social theory and to the theorizing and empirical analysis of digital culture, politics, and practices. We will read monographs on globalization, power and control, dissent and protest, self and community, and the public sphere as they relate to digital media technologies. They include works by McLuhan, Castells, Turkle, Papacharissi, Lievrouw, Bimber, W. Chun and more. These monographs will be examined alongside the works of Gramsci, Foucault, Williams, Habermas, Bourdieu, Giddens, and Melucci. Students are required to submit weekly reading reports, make oral presentations, and complete a term paper.
Taught by: Yang
One term course offered either term
Also Offered As: SOCI 664
Activity: Seminar
1 Course Unit

COMM 671 Computational Social Science
This is an advanced graduate research seminar in which guest speakers will present cutting-edge research in Computational Social Science. Our focus will be on carefully reading the speaker's work, and discussing in detail their theoretical models, empirical methods, and overall scientific contribution. Participants will also present in the seminar, which will help to prepare them for professional presentations of their work at conferences and job talks. This seminar will meet weekly.
Taught by: Centola
One term course offered either term
Activity: Seminar
1 Course Unit
COMM 673 Arts & Propaganda
This course (seminar) deals with examples of controversy or struggles, through public art or exhibition, to define or proclaim, contest or reinforce national identities. Some are internal debates, within national boundaries, some are transnational and exist in a global frame. In most instances, there are sharp disputes—having to do with history and its interpretation and representation, about the role of museum & implications for legitimacy, about the relationship of patronage to power. Some sessions will be rooted in art history and iconography, some in the use of archival material to bring fresh perspectives to bear, some on aspects of law and regulation.
Taught by: Price
Course offered fall; even-numbered years
Activity: Seminar
1 Course Unit

COMM 675 Message Effects
Current research, theory and statistical methods for assessing the effects of messages. Specific focus on messages designed to have a persuasive effect on attitudes, beliefs, opinions, or behaviors. Experimental and non-experimental research from mass and interpersonal communication, health, social psychology, advertising, political science and journalism will be considered. Unintended effects—such as the consequences of violent pornography—are not considered.
Taught by: Cappella
Course not offered every year
Prerequisite: COMM 575
Activity: Seminar
1 Course Unit

COMM 684 Data Visualization for Research
Empirical research employs data to gain insights and build a theoretical understanding of the world. An appropriate visualization of data is key to illuminating hidden patterns and effectively communicate the main findings of research. This course will discuss the visualization strategies of published research, give recommendations of best practice, and discuss tips and techniques for specific research purposes (i.e. hypothesis testing, group comparison) and data structures, including temporal, geographic, and network data. This course will equip you with tools you can use to learn through visualization and to communicate more effectively your own research.
Taught by: Gonzalez-Ballon
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 697 Popular Culture and Politics
Not surprisingly, most research regarding the media’s impact on political attitudes, opinions, knowledge and behaviors focuses on news and public affairs genres, ignoring the vast majority of media content labeled “entertainment.” Spurred in part by technological, economic, cultural and political changes that have increasingly blurred the line between news and entertainment, a small but growing body of empirical research is exploring the political influence of popular culture. In this course we will critically review this literature, focusing on issues of theory, methods, findings and implications.
Taught by: Deli Carpini
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 699 Advanced Project in a Medium
Proposal written in specified form and approved by both the student’s project supervisor and academic advisor must be submitted with registration. Open only to graduate degree candidates in communication. One term course offered either term
Activity: Independent Study
1 Course Unit

COMM 701 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Taught by: Pickard
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 703 International Communication: Power and Flow
The tumultuous rise of new media technologies, including the Internet and social media, combine with grinding geopolitical change to create dramatic changes in law and policy regarding speech and society. This course is an examination of current dilemmas in historical context; about strategic communications in contrast or challenge to goals of free expression and to the exercise of power over the flow of information. Taking relevant contexts, including societies in transition, authoritarian societies, states and societies in conflict, we explore the relationship of the state and other entities to the flow of words and images, and how these messages impact public opinion, stability, and democratic growth. We start with a theoretical orientation focused on two competing paradigms: the paradigm of free expression and the paradigm of national identity, conflict management, and sovereignty. The class will then explore several case studies viewed through the lens of narrative theory. Areas of discussion may include case studies such as Ukraine, Russia, Syria, Iran and, as well, the drama of the development of global internet policy.
Taught by: Price, M.
One term course offered either term
Also Offered As: LAW 914
Activity: Seminar
1 Course Unit
COMM 706 Analysis of Election Data
This course is intended to serve as a workshop for students interested in the empirical analysis of elections, public opinion and political communication more generally. The centerpiece of the course will be an original research paper produced by each student on a topic of his or her own choosing. The requirements for these papers are fairly open, but demanding: the research papers must a) involve empirical analysis of a major election data set, b) be oriented toward answering an original research question selected with the guidance of the instructor, and c) aim to be of publishable quality. There are no formal prerequisites for the course. However, if you have less than two semesters of statistical training, and/or no formal background in the study of elections, public opinion or political communication, then this is probably not the right course for you. In order to be able to formulate an original research question, you need some background in the literature, which is provided by other courses, but is not a formal part of this course.
Taught by: Mutz
One-term course offered either term
Also Offered As: PSCI 805
Activity: Seminar
1 Course Unit

COMM 712 Race, Media and Politics
"Race" has and continues to play an important role in American politics. In this course we will critically review the relevant Communication and Political Science literature with an eye to understanding: (1) the role of the mass media in the construction and dissemination of race as a sociopolitical concept; (2) how race affects political attitudes, opinions and behaviors; (3) the unique methodological problems researchers face in studying racial attitudes and opinions; and (4) shortcomings in the existing scholarship on race, media and politics and how these shortcomings might be addressed.
Taught by: Delli Carpini
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 713 Historical and Visual Culture Methodology
This methodology class will examine different historiographical and visual approaches, particularly as they relate to the study of communication. Students will be guided through archival research skills, working extensively with primary sources in their final projects. Each week will feature a different "research question" that will require archival exploration to answer, and the readings will relate to different ways to approach the question. The second half of the course will be devoted to developing and workshopping final projects.
Taught by: Pearl
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 715 Political Communication
This course examines the role of political communication in influencing political attitudes and behaviors. Because of the broad nature of the topic, course readings and lectures will be interdisciplinary, drawing on research in sociology, history, psychology, political science and communication research. There are two primary goals for the course. One goal is to acquaint graduate students with the wide-ranging literature on political communication. A second major goal is to stimulate ideas for original research in the field of political communication. Toward this end, by the end of the semester students will be expected to be sufficiently familiar with the field to propose original studies on topics of their choosing. The formulation of an original research question and research design will be an important component of the final examination.
Taught by: Mutz
Course not offered every year
Also Offered As: PSCI 715
Activity: Seminar
1 Course Unit

COMM 721 Theory and History in Global Communication
For more than a half century, global communication theory has been shaped by interaction between worldwide geopolitical developments on the one hand, and theoretical trends in the social sciences and humanities on the other hand. This course is designed to give you a firm grasp of the historical trajectory of global communication theory and to develop knowledge of the central debates that have animated the field since the mid-20th century. We will discuss how these debates have changed, under what circumstances, and how contemporary scholarship wrestles with them; and how language and jargon in the field has shifted from "international" to "global." We will also explore why some key issues and media have received relatively scant attention in global communication research, while others have arguably been over-emphasized. We will read a mixture of primary sources by luminaries in the different paradigms that have dominated global communication, complemented with secondary texts that are carefully selected to give you a sense of the architecture of the field, an understanding of what sub-areas of global communication scholarship are published and the journals and presses that publish in those sub-areas.
Taught by: Kraidy
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 722 Theories and Methods in Qualitative Research
The objective of this course is to ensure that students have a grasp of the fundamental theories and methods of qualitative research. After spending time immersing ourselves in the metatheories that shape social science research, we will address ethical issues that emerge in all human subjects research (qualitative and otherwise), focusing primarily on responsible treatment of participants and their data. Then we will work through a series of research techniques, including semi-structured interviews, focus groups, ethnography, discourse analysis and participatory mapping. With the goal of providing practical instruction on qualitative methods and a grounding in theoretical issues, this course is meant to prepare studies for conducting a broad range of qualitative research projects in communication and media studies.
Taught by: Lingel
Course not offered every year
Activity: Seminar
1 Course Unit
COMM 727 Evaluation of Communication Campaigns
The various roles of research in campaign work: foundational research, formative research, monitoring research, summative evaluation research, policy research. The place for a theory of campaign effects. The ethics of evaluation research. Alternative designs, measurement, statistical and analytic approaches.
Taught by: Homik
One term course offered either term
Activity: Seminar
1 Course Unit

COMM 731 Beauty & Technology
Have concepts of beauty changed over time? According to Darwin, the meaning of facial expressions and emotions are consistent across cultures and are universally understood. Modern scholarship would have us believe that notions of human beauty are framed by facial symmetry and reproductive fitness, while fashion magazines seem to challenge both these claims. What role does technology play in communicating and shaping ideas of beauty? By the same token, to what extent is technology deployed in service of the ideas of those behind the lens? In this course, we will explore changing notions of beauty and their relationship to the technologies and media through which it is viewed.
Taught by: Pearl
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 741 Media Effects Research Design
This course will include three components. Part one will focus on readings and lectures about media effects research design, with some emphasis on exposure measurement, and on constructing out-of-laboratory designs including natural and quasi experiments, longitudinal and time series designs and designs appropriate for evaluating persuasive campaigns. Part two will be case focused, asking for design critiques of current published research studies. Part three will provide an opportunity for development of designs relevant to students’ own interests.
One term course offered either term
Activity: Seminar
1 Course Unit

COMM 745 Media Ethnography: Theory and Practice
This course will allow students to conduct ‘critical readings’ of ethnographic engagements with television, radio and film as cultural phenomena. We will examine how ethnographers use their method and genre to understand the production, reception and circulation of mass media. We will also draw on contemporary social/critical theory to unpack some of the epistemological assumptions organizing and anchoring such qualitative work. (The internet will also be discussed.)
Taught by: Jackson
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 753 The Internet, State Power, and Free Expression: Media Policy Evolution in a Evolving Global Context
Global Internet policy is a zone of contestation, with states, corporations, civil society, and “netizens” seeking to assert particular perspectives. This course studies processes and rhetoric of Internet policy-making. It seeks to identify the major competing positions and the structures in key countries charged with projecting and obtaining global consensus. Among the concepts to be analyzed in this context are “sovereignty,” “Internet freedom,” “multi-stakeholder involvement,” and the growing role of cybersecurity. There will be sessions on the WCIT meetings in Dubai in 2012 and its predecessors, on approaches to Internet policy in US, China and Brazil, Russia and India. We shall explore the relationship between national policy making and global approaches.
Taught by: Price
Also Offered As: LAW 914
Activity: Seminar
1 Course Unit

COMM 760 Language and Social Constructions of Reality
This seminar inquires into the principles and processes by which realities come to be socially constructed and discursively maintained. It serves as an introduction to the emerging epistemology of communication, which is concerned less with what communication is than with what it does, constitutes, and actively maintains, including when being studied. The seminar develops analytical tools to understand how realities establish themselves in language and action, how individuals can become entrapped in their own reality constructions, how facts are created and institutions take advantage of denying their constructedness. After reading several exemplary studies, students explore the nature of a construction on their own. The seminar draws on the discourse of critical scholarship and emancipatory pursuits, which are allied with feminist writing, cultural studies, and reflexive sociology. It is committed to dialogical means of inquiry and takes conversation as an ethical premise.
Taught by: Krippendorff

1 Course Unit

COMM 801 Filter Bubbles, Long Tails, and Information Cascades: Research Methods for a Fragmented Media Environment
Scholars and pundits have made many claims in recent years about the impact that digital technologies, and social media in particular, play in shaping access to political information and the formation of beliefs. However, all these claims rely on specific measurement instruments and research designs that are not always appropriately scrutinized or evaluated. This course will discuss the different analytical approaches that can be used to measure media consumption, selective exposure, bias, opinion formation, and the diffusion of information in the online media environment. Our goal is to assess the strengths and weaknesses of different research designs with an eye on how to best triangulate available evidence and advance in a cumulative fashion in this important research domain.
Course not offered every year
Activity: Seminar
1 Course Unit
COMM 811 Neurobiology of Social Influence
A graduate level statistics course, ability to read primary research articles in cognitive neuroscience (no course prereqs, but students with less background may need to do supplemental work at the front end). Considerable resources are devoted to constructing mass media campaigns that persuade individuals exert powerful influence one another without even knowing it. Still, our ability to design and select optimal messages and interventions is far from perfect. This course will review investigations in social and cognitive psychology and communication sciences that attempt to circumvent the limits of introspection by using biological and implicit measures, with particular focus on neuroimaging studies of social influence and media effects. Course not offered every year
Activity: Seminar
1 Course Unit

COMM 813 Theor & Hist Global Comm
For decades, global communication theory has been shaped by interaction between worldwide political, economic and technological developments and theoretical trends in the social sciences and humanities. This course is designed to give you a firm grasp of the historical trajectory of global communication theory and to acquire knowledge of the central debates that have animated the field since the mid-20th century. From development communication to global digital culture, we will discuss how these debates have changed, under what circumstances, and how contemporary scholarship wrestles with them. We will also explore why some key issues and types of media have received relatively scant attention in global communication research, while others have arguably been over-emphasized. We will read a mixture of primary sources by intellectual leaders of different paradigms that have dominated global communication complemented with secondary texts that are carefully selected to give you a sense of the architecture of the field, an understanding of what sub-areas of global communication scholarship are published and the journals and presses that publish in those sub-areas. Required readings will be available on electronic reserves.
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 815 Community, Network, and Crowd: Critical Perspectives on Forms of Human Togetherness
Between the micro-level of individuals and the macro level of society is the meso level of social phenomena, where much sociological research locates its scholarship. This seminar considers theories of human togetherness that have shaped research in the humanities and the social sciences. As researchers shift between terms like community, network, public, and collective, what connotations drop out and emerge? What are the relevant theories that can help us be critical and precise about the analysis of social groups? Our discussions will examine the meanings of a broad range of concepts, from crowds and publics to community and networks, from secret societies and gangs to counter-cultural communities. Special attention will be given to the sources, functions, and influences of different types of communities and the relationship among communication, community, and solidarity. Readings will include classical statements by Durkheim and Simmel as well as contemporary writings by Kristen Ross, Jodi Dean, Judith Butler, Michael Warner, Etienne Wenger Antonio Negri, Michael Hardt, danah boyd and others.
Course not offered every year
Also Offered As: SOCI 815
Activity: Seminar
1 Course Unit

COMM 835 Revolting Media: Communication and Social Change
Social change has always had its communicative element: pamphleteers calling for the abolition of absolute monarchy, citizen journalists campaigning against tyranny, filmmakers celebrating revolution, broadcasters publicising civil rights, illegal radio stations supporting anti-colonial struggles, bloggers organising pro-democracy movements. This course celebrates the role of media in historical revolts and considers the work of key theorists -- including Fanon, Enzensberger, Williams and Mattelart - who mapped out the the conditions in which communications could play a progressive role in reform and revolution. The course then moves from an emphasis on the media in revolt to more recent debates concerning a revolt against the media. This includes looking at the collapse of trust in key public institutions, the breakdown of the traditional liberal consensus, increased pressures on impartiality and the rise of populist media forms and outlets. The course features a timeline of revolting media that includes everything from purposeful struggles against inequality and injustice to more recent manifestations marked by 'fake news,' 'post truth' and 'emotion-driven journalism' in an effort to demonstrate the diversity of media models available (but not always offered).
One term course offered either term
Activity: Seminar
1 Course Unit

COMM 848 Decoding the Social World
Have digital technologies, and the new data they provide, helped us advance old theoretical debates about communication and the role it plays in social life? How was social thought shaped by previous technological breakthroughs and how is the digital revolution shaping our theories today? What are the questions that are still open, the puzzles that require further research and more theoretical development? This seminar will consider these and related questions, offering a (personal) overview of the frontiers of communication research as seen through the lens of digital data and with a focus on the identification of social mechanisms. The discussions will be articulated around two forthcoming books: ‘Decoding the Social World: When Data Science Meets Communication,’ and ‘The Oxford Handbook of Communication in the Networked Age,’ which will offer a starting point to start thinking about theoretical problems and the best empirical strategies to solve them. Taught by: Gonzalez-Bailon
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 850 The Body: Theory, Method, Discourse
Taught by: Kraidy
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This seminar examines the body as a central communication problematic in theory research. We will read a wide-ranging selection of essays, articles and books, examining a variety of research traditions that have focused on the body - phenomenology, feminism, biopolitics, etc-across the humanities and social sciences. We will explore how the body has been understood as tool, symbol, icon, battlefield, and lived experience. In turn we will examine contemporary applications, ending with digital culture, of these approaches through notions of affect, aesthetics, materiality, embodiment, performativity, docility, social action, and creative insurgency. Though theoretical, this seminar has a strong methodological component focusing on discourse analysis.
COMM 856 Privacy, Surveillance & Marketplace
This class will look at various philosophical and sociological perspectives on privacy, put them into historical context, and explore some of the dynamics of the contemporary marketplace that may (or may not) affirm Sun Microsystems CEO Scott McNealy's 1999 comment to reporters and analysts, "You have zero privacy anyway. Get over it." The class will involve mainly reading and discussion, with possibly a paper that extends a stream of the readings in a particular direction.
Taught by: Turow
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 857 Advanced Qualitative Research
For students writing qualitative dissertation proposals. Seminar members will read and respond to one another's developing drafts and preliminary research. We will talk through unfolding projects and develop research and writing practice. For most students the goal is to produce a defensible proposal by the end of the semester. In some cases students who are not writing formal proposals but are beginning to focus on literature review & dissertation design may find this seminar useful. Adviser approval required for enrollment.
Taught by: Marvin
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 860 Global Media Activism: The 1960s
The long 1960s witnessed the explosion of media and activism on a global scale. From the French May Movement in 1968 to the Chinese Cultural Revolution, from the student protests in Zimbabwe, Germany and Brazil to Women's Liberation and the New Left in the United States, political radicalism was deeply intertwined with activist and alternative media and the mainstream press. The ideological divide of the Cold War not only failed to stop the transnational flows of the narratives and icons of radicalism, but gave them a fateful potency. In this process, the meanings and forms of political activism were transformed. This seminar analyzes this wave of political activism and its media practices while tracing its long-term consequences, memories, and legacies. Our goal is to understand media and activism in a pivotal period of global modernity as well as the historical origins of mediated activism in the 21st century.
Taught by: Yang
Also Offered As: SOCI 860
Activity: Seminar
1 Course Unit

COMM 867 Media and Social Movements
Examines the meanings and roles of media and communication in social movements; analyzes media reform activism; studies both historical movements and contemporary protests around the world (Arab Spring, Indignados, Occupy, etc.); covers a broad range of theoretical perspectives, especially network and diffusion theories, political economy, narrative theory, and theories of performance. Students are required to submit a final research paper.
Taught by: Gonzalez-Bailon, Pickard & Yang
Course not offered every year
Also Offered As: SOCI 867
Activity: Seminar
1 Course Unit

COMM 869 Ethnography and the Internet
This course covers qualitative and interpretive methods for investigations of socio-technical phenomena related to digital culture and online life. Concentrating on ethnographic methods, the course will cover methodological issues common to research on digital technologies, drawing on theorists from communication, media studies, information studies, sociology, anthropology and internet studies. In addition to developing a sophisticated understanding of ethical and methodological issues surrounding ethnography and online life, students will complete a research proposal for a qualitative or interpretive study of online phenomena.
Taught by: Lingel
Course not offered every year
Activity: Seminar
Prerequisite: Completion of graduate level research methods course
1 Course Unit

COMM 871 Computational Social Science Seminar
This is an advanced graduate research seminar in which guest speakers will present cutting-edge research in Computational Social Science. Our focus will be on carefully reading the speaker's work, and discussing in detail their theoretical models, empirical methods, and overall scientific contribution. Participants will also present in the seminar, which will help to prepare them for professional presentations of their work at conferences and job talks. This seminar will meet weekly.

Course not offered every year
Activity: Seminar
1 Course Unit

COMM 872 Internet Experiments Practicum
Web-based experiments are an exciting new way to do social science research online. They have created a vast number of new scientific opportunities for studying complex social systems. This course is an advanced undergraduate / graduate practicum that focuses on how to build Internet experiments. Class participants will be exposed to the literature in computational social sciencescience that uses the Internet to study human behavior. Students will be expected to participate in a hands-on research project in which we build a new experiment to study complex social behavior. This course requires strong research and analytic abilities, and would be appropriate for both advanced social science majors with a strong technical background, and advanced computer science and engineering majors with a strong interest in social science. The practicum will meet weekly. Interested students will need to prepare a paragraph describing their interest and preparation for this course, and will be asked to discuss their background with Professor Centola.
Taught by: Centola
Course not offered every year
Activity: Seminar
1 Course Unit
COMM 880 The Social Neuroscience of Communication
This interdisciplinary course focuses on understanding the mechanisms of social thinking, media effects and interpersonal communication across multiple levels of analysis. We use the brain as one powerful window to understand and predict outcomes that are challenging to predict otherwise. The course will cover foundational readings and involve weekly, seminar style discussions of recent papers in social neuroscience, neuroeconomics and communication science.
Taught by: Falk
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 883 Describing Your Data
This course is for students who have collected empirical data and will explore ways of describing data for scientific and translational purposes. For example, students will explore different ways to explore and visualize their data, write about their data (e.g., a conference abstract vs. a blog post), present present their data (e.g., a conference talk vs. a pop talk) and make their data more reproducible. Students will also read scholarly work (oversampling, though not limited to work on media effects) and critique their work in relation to what is known about effective communication and reproducibility. Students should come prepared to engage with art, science and computer programming.
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 889 Cultural Sociology
Studies culture as values, scripts, practice, performance, and style in the contexts of everyday life, social class and status groups, social movements, and status groups, social movements, and changes of communication technologies. Approaches politics, society, institutions, identities, and social change as dynamic processes and complex interactions at both micro/meso and meso/macro levels. Examines the production, reception, circulation, and effects of signs, symbols, and stories. Readings include both classic authors (Elia, Simmel, Bakhtin, Goffman, Foucault, Bourdieu, Raymond Williams, etc) and contemporary works from sociology and communication studies.
Taught by: Yang

COMM 892 Critical Data Studies
Course not offered every year
Activity: Seminar
1 Course Unit

COMM 893 Networks, Theories, and Online Data: New Approaches to Social Change
How do fads and innovations spread across a population? Why do political parties polarize, or reach an unexpected consensus? How can social technologies help to promote the emergence of social movements and new democratic politics? This course examines theories of social change and innovation diffusion, in light of methodological advances in network science and computational social science. The new revolution in computing has creating remarkable opportunities for doing social science research, and understanding the dynamics of how collective behaviors emerge and spread. The goal of the course is to think carefully about how formal/predictive models can be connected with empirical data. This course addresses research at the forefront of social science and complex systems. Participants will get the most out of the material by aggressively pursuing questions that emerge from the readings, and from participating in hands-on research projects. The expectation is that students will develop research projects, or mature existing projects, which will be the focus of their work for the course. They should use this course as a foundation for developing publishable research. This course will also focus on the presentation of research - emphasizing clear, intelligible presentations, suitable for disciplinary conferences.
Taught by: Centola
One-term course offered either term
Activity: Seminar
1 Course Unit

COMM 894 Introduction to Networks
Much of what we think and do is shaped by social interactions, by the behavior we see in other people, or the information we receive from them: we pay attention to what our friends or we monitor news through the feeds of social media, and we are more likely to use technologies already embraced by other users. Networks are behind those (and, by extension, most) dimensions of social life. They offer the language to capture the invisible structure of interdependence that links us together, and the means to analyze dynamics like diffusion, influence, or the effects of media in an increasingly diverse information environment. The aim of this course is to introduce networks and the relational way of thinking. Students will gain the necessary literacy to read, interpret, and design network-based research; learn how to go from concepts to metrics; and draw and interpret networks through the lens of substantive research questions. We will pay equal attention to the theory and the empirics of network science, and set the foundations for more advanced work on networks.
Taught by: Gonzalez-Bailon
One-term course offered either term
Activity: Seminar
1 Course Unit
COMM 898 Social Influence, Media Effects and the Brain
Considerable resources are devoted to constructing mass media campaigns that persuade individuals to change their behavior. Individuals exert powerful influence on others without even knowing it. Still, our ability to design and select optimal messages and interventions is far from perfect. This course will review investigations in social and cognitive psychology and communication sciences that attempt to circumvent the limits of introspection by using biological and implicit measures. With particular focus on socio-interactive studies of social influence and media effects.

Taught by: Falk
Course not offered every year
Prerequisites: A graduate level statistics course, ability to read primary research articles in cognitive neuroscience (no course prerequisites, but students with less background may need to do supplemental work at the front end)
Activity: Seminar

Comparative Literature (COML)

COML 001 Approaches to Genre
This is a topics course. Please see COML website for current semester’s description: http://ccat.sas.upenn.edu/Complit/ Some dare to build the struts and rafter of a Jerusalem to come, some turn their heads away from the writing on the wall, and some dance as the palaces burn. We mean to investigate each, and to articulate our own responses to the end that comes again and again. Although no artist, author, or prophet that we study was able to shake their sense of the final, the course itself will not have one. But it will address those figures in depth. They include: Margaret Atwood, Stanley Kubrick, Sigmund Freud, John of Patmos, William Blake, Ovid, Lars Von Trier, Octavia Butler, William Shakespeare, Samuel Beckett, Boccaccio, Mary Shelley, Karl Marx, Mohammmed, Donna Haraway, Frank Kermode, Cormac McCarthy, and Norman O. Brown.
One-term course offered either term
Also Offered As: ENGL 001
Activity: Seminar
1 Course Unit
Notes: Communication within the Curriculum. This is a topics course. This seminar engages questions of literary genre, including its function as a mediating presence for thinking about audience, literary history, and the marketplace. The theme of the seminar will change with the instructor. Customarily this course will be affiliated with Communication within the Curriculum (CWIC) and so will have a speaking and presentation component to it.

COML 002 Approaches to Literary Studies
This is a topics course. Please see the Comp Lit website for current semester’s description: http://ccat.sas.upenn.edu/Complit/

COML 012 India’s Literature: Love, War, Wisdom and Humor
This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. We will read texts in translation from all parts of South Asia up to the sixteenth century. We will read selections from hymns, lyric poems, epics, wisdom literature, plays, political works, and religious texts.
For BA Students: Arts and Letters Sector
Taught by: Patel
Course not offered every year
Also Offered As: SAST 004
Activity: Lecture
1 Course Unit

COML 013 Introduction to Modern South Asian Literatures
This course will provide a wide-ranging introduction to the literatures of South Asia from roughly 1500 to the present, as well as an exploration of their histories and impact on South Asian society today. How are literary movements and individual works - along with the attitudes towards religion, society, and culture associated with them - still influential in literature, film, and popular culture? How have writers across time and language engaged with questions of caste, gender, and identity? We will read from the rich archive of South Asian writing in translation - from languages that include Braj, Urdu, Bangla, and Tamil - to consider how these literatures depict their own society while continuing to resonate across time and space. Topics of discussion will include the Bhakti poems of personal devotion, the literature of Dalits - formerly referred to as the Untouchables - and the ways in which literature addresses contemporary political and social problems. Students will leave this course with a sense of the contours of the literatures of South Asia as well as ways of exploring the role of these literatures in the larger world. No prior knowledge of South Asia is required; this course fulfills the cross-cultural analysis requirement.

COML 015 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php. Fulfills Arts and Letters sector requirement.
Course not offered every year
Also Offered As: ENGL 015, MUSC 016
Activity: Seminar
1 Course Unit
COML 016 Topics in Literature
This course will explore various topics within the diverse landscape of literature with an emphasis on a particular theme or genre.
Course not offered every year
Also Offered As: CIMS 015, ENGL 016
Activity: Seminar
1 Course Unit
Notes: Freshman seminar.

COML 023 In Praise of the Small
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.
Taught by: Weissberg
Course not offered every year
Also Offered As: GRMN 023
Activity: Seminar
1 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

COML 51 Translating Literature
Activity: Lecture
1 Course Unit

COML 053 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwato to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African fugu, and North African rai and hiphop. Through reading and listening to live performances, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post-colonial era.
Taught by: Muller
Also Offered As: AFRC 053, MUSC 051
Activity: Lecture
1 Course Unit

COML 056 Seeing/Hearing South Africa: Politics and History through Contemporary Performance
This course begins in the regular semester–students are provided a general introduction to South African history, politics, environment, and performance through a range of forms: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the two week intensive travel to South Africa (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites. For fall/winter travel: focus is on Cape Town’s New Year’s Festival performed by those historically called “Cape Coloured” a Festival that makes complicated understandings of race, slavery, and transatlantic translation of borrowed culture. For the Spring/late spring travel, the destination is music festivals in mid-May. Both classes include visits to Robben island, Kirstenbosch gardens; “Cape Malay” heritage sites; travel to KwaZulu Natal, and to Johannesburg’s apartheid museum, Soweto’s anti-apartheid destinations, the Cradle of Humankind works heritage site, a game park, and the Union Buildings in Pretoria. En route we will stop over to view Khoisan rock art.
Taught by: Muller
Also Offered As: AFRC 056, ANTH 056, MUSC 056
Activity: Seminar
1 Course Unit
Notes: Application required through Penn Global: https://global.upenn.edu/pennabroad/pga

COML 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts — including film, the theatre, music, and the visual arts.
The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin.
Course not offered every year
Also Offered As: ENGL 059
Activity: Lecture
1 Course Unit
Notes: This is a topics course.

COML 061 20th-Century British Literature
This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott.
Course not offered every year
Also Offered As: ENGL 061
Activity: Lecture
1 Course Unit
Notes: See Comparative Literature website for current offerings at: http://ccat.sas.upenn.edu/Complit/
COML 062 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetries, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course.
Course not offered every year
Also Offered As: ENGL 062
Activity: Lecture
1 Course Unit

COML 065 20th-Century British Novel
This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison.
Course not offered every year
Also Offered As: ENGL 065
Activity: Lecture
1 Course Unit

COML 074 Science and Literature
This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploitation of space and time, biological engineering, superman, robots, aliens, and other worlds—and the differences between European and American treatment of these themes.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: ENGL 075, HIST 117, HSOC 110, STSC 110
Activity: Lecture
1 Course Unit

COML 090 Women and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cher?e Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg.
One-term course offered either term
Also Offered As: AFRC 090, ENGL 090, GSWS 090
Activity: Lecture
1 Course Unit
Notes: This is a topics course. If the topic is “Gender, Sexuality, and Literature,” the following description applies.

COML 093 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender.
Course not offered every year
Also Offered As: CIMS 093, ENGL 093
Activity: Lecture
1 Course Unit
Notes: This is a topics course.

COML 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the “New” Criticism of the 1920’s and 30’s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the Comparative Literature website at http://ccat.sas.upenn.edu/complit/ for a description of the current offerings.
Course not offered every year
Also Offered As: ENGL 094, GRMN 279
Activity: Lecture
1 Course Unit
COML 095 Universal Language: From the Tower of Babel to Artificial Intelligence

"Universal Language" is a course in intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, this language can explain the origins and meaning of human experience, and can enable universal understanding and world peace.

Also Offered As: ENGL 219, RUSS 095
Activity: Seminar
1 Course Unit

COML 100 Introduction to Literary Study

Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself—one of the most subversive of all poetic thinkers—was condemned to death for corrupting the young with his speeches. All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly: full of contempt and horror and grandiosity and malice. From Socrates' day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid—about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate—and for saying it in ways that are artistically innovative, surprising, seductive, ravishingly unanticipated.

One term course offered either term
Also Offered As: ENGL 100
Activity: Lecture
1 Course Unit

COML 101 Introduction to Folklore

The purpose of the course is to introduce you to the subjects of the discipline of Folklore, their occurrence in social life and the scholarly analysis of their use in culture. As a discipline folklore explores the manifestations of expressive forms in both traditional and modern societies, in small-scale groups where people interface with each face-to-face, and in large-scale, often industrial societies, in which the themes, symbols, and forms that permeate traditional life, occupy new positions, or occur in different occasions in in everyday life. For some of you the distinction between low and high culture, or artistic and popular art will be helpful in placing folklore forms in modern societies. For others, these distinction will not be helpful. In traditional societies, and within social groups that define themselves ethnically, professionally, or culturally, within modern heterogeneous societies, and traditional societies in the Americas, Africa, Asia, Europe and Australia, folklore plays a more prominent role in society, than it appears to plan in literate cultures on the same continents. Consequently the study of folklore and the analysis of its forms are appropriate in traditional as well as modern societies and any society that is in a transitional phase.

For BA Students: Humanities and Social Science Sector
Taught by: Struck
Course not offered every year
Also Offered As: FOLK 101, NELC 181, RELS 108
Activity: Lecture
1 Course Unit

COML 104 Study of a Period

This is an introduction to literary study through a survey of works from a specific historical period—often the 20th century—but some versions of this course will focus on other times. We will explore the period’s important artistic movements, ideas, and authors, focusing on interconnectedness of the arts to other aspects of culture.

COML 108 Greek & Roman Mythology

Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinds that all of us wear, though we do not realize it? Investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

COML 114 Literature of the South Asian City: Space, Culture, Politics
The South Asian city as a way of organizing space and social relations, as a symbol, as a memory is the subject of this course. Through primarily, though by no means exclusively, readings of literature in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary f/Phere. We will see reflections of the city in poetry recited in its homes, detective novels sold in its train stations, stories scribbled in its cafes, plays staged in its theaters, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia, and will include works by writers such as Mirza Ghalib, Rabindranath Tagore, Saadat Hasan Manto, and Vijay Tendulkar. We will examine these works in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.
Taught by: Goulding
Course not offered every year
Also Offered As: SAST 120, URBS 120
Activity: Lecture
1 Course Unit

COML 115 Experimental Writing Seminar
It's clear that long-cherished notions of creativity are under attack, eroded by file-sharing, media culture, widespread sampling, and digital replication. How does writing respond to this environment? This workshop will rise to that challenge by employing strategies of appropriation, replication, plagiarism, piracy, sampling, plundering, as compositional methods. Along the way, we'll trace the rich history of forgery, frauds, hoaxes, avatars, and impersonations spanning the arts, with a particular emphasis on how they employ language. We'll see how the modernist notions of change, procedure, repetition, adn the aesthetics of boredom dovetail with popular culture to usurp conventional notions of time, place, and identity, all as expressed linguistically.
Taught by: Bernstein
One term course offered either term
Also Offered As: ENGL 111
Activity: Seminar
1 Course Unit
Notes: Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor.

COML 116 Introduction to Film Theory
This course offers students an introduction to the major texts in film theory across the 20th and 21st centuries. The course gives students an opportunity to read these central texts closely, to understand the range of historical contexts in which film theories are developed, to explore the relationship between film theory and the major film movements, to grapple with the points of contention that have emerged among theorists, and finally to consider: what is the status of film theory today? This course is required for all Cinema Studies majors, but is open to all students, and no prior knowledge of film theory is assumed. Requirements: Close reading of all assigned texts; attendance and participation in section discussions; 1 midterm exam; 1 take-home final exam.
Also Offered As: ENGL 095
Activity: Lecture
1 Course Unit

COML 118 Poetics of Screenwriting
This course studies scriptwriting in a historical, theoretical and artistic perspective. We discuss the rules of drama and dialogue, character development, stage vs. screen writing, adaptation of nondramatic works, remaking of plots, author vs. genre theory of cinema, storytelling in silent and sound films, the evolvement of a script in the production process, script doctoring, as well as screenwriting techniques and tools. Coursework involves both analytical and creative tasks.
Taught by: Todorov

Also Offered As: CIMS 111, RUSS 111
Activity: Seminar
1 Course Unit

COML 119 The Novel
An introduction to literary study through a genre, either the short story or poetry. Versions of this course will vary widely in the selection of texts assigned. Some versions will begin with traditional stories or poems, including a sampling of works in translation. Others will focus exclusively on modern and contemporary American short fiction or poetry. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: ENGL 103
Activity: Lecture
1 Course Unit

COML 120 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshand Bani-Etemad, Asghar Farhadi, Bahram Ghbadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.
Taught by: Entezari
Course not offered every year
Also Offered As: CIMS 118, GSWS 118, NELC 118, NELC 618
Activity: Seminar
1 Course Unit
COML 121 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups. A portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others' translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polyglottic and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay.
Taught by: Silberman, Taije
Course not offered every year
Also Offered As: ENGL 120
Activity: Seminar
1 Course Unit

COML 125 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and tales, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
For BA Students: Arts and Letters Sector
Taught by: Loomba
One-term course offered either term
Also Offered As: ENGL 103, FOLK 125, NELC 180, SAST 124, THAR 105
Activity: Lecture
1 Course Unit

COML 126 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science and technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper
For BA Students: Arts and Letters Sector

Notes: All readings and lectures in English.

COML 127 The Adultery Novel
The object of this course is to analyze narratives of adultery from Shakespeare to the present and to develop a vocabulary for thinking critically about the literary conventions and social values that inform them. Many of the themes (of desire, transgression, suspicion, discovery) at the heart of these stories also lie at the core of many modern narratives. Is there anything special, we will ask, about the case of adultery—once called “a crime which contains within itself all others”? What might these stories teach us about the way we read in general? By supplementing classic literary accounts by Shakespeare, Pushkin, Flaubert, Chekhov, and Proust with films and with critical analyses, we will analyze the possibilities and limitations of the different genres and forms under discussion, including novels, films, short stories, and theatre. What can these forms show us (or not show us) about desire, gender, family and social obligation? Through supplementary readings and class discussions, we will apply a range of critical approaches to place these narratives of adultery in a social and literary context, including formal analyses of narrative style and feminist criticism, Marxist and sociological analyses of the family, and psychoanalytic understandings of desire and family life.

Notes: All readings and discussions in English.

COML 128 The Diary
Diary writing is an intimate mode of expression in which individuals seek to find meaning in their personal lives and relations, responding to the external realities in which they live. Their coping is subjected to their historical, educational and social contexts, and to the generic conventions of diary writing. This course examines the diary as a genre, exploring its functions, meanings, forms and conventions, comparing it with fictive and non-fictive autobiographical writings such as the diary novel, autobiography and the memoir, as well as comparative gender diary-writing.

COML 140 Topics in Modernism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts.
One term course offered either term
Also Offered As: ARTH 385, ENGL 259, FREN 259, GRMN 249
Activity: Seminar
1 Course Unit
Notes: Critical Speaking

COML 141 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with Snoop Dogg and Eminem? Many things, in fact, but perhaps the most fundamental is that they are all united by a stance that constantly threatens to offend prevailing social norms, whether through obscenity, violence or misogyny. This course will examine our conceptions of art (including literary, visual and musical media) that are deemed by certain communities to transgress the boundaries of taste and convention. It juxtaposes modern notions of artistic transgression, and the criteria used to evaluate such material, with the production of and discourse about transgressive art in classical antiquity. Students will consider, among other things, why communities feel compelled to repudiate some forms of art, while others enter into classics.*

COML 143 Foundations of European Thought: from Rome to the Renaissance
This course offers an introduction to the world of thought and learning at the heart of European culture, from the Romans through the Renaissance. We begin with the ancient Mediterranean and the formation of Christianity and trace its transformation into European society. Along the way we will examine the rise of universities and institutions for learning, and follow the humanist movement in rediscovering and redefining the ancients in the modern world.

Activity: Lecture
1 Course Unit

COML 148 Slavery and Serfdom
During the Cold War, the United States and Russia were locked in an ideological battle, as capitalist and communist superpowers, over the question of private property. So how did these two countries approach the most important question regarding property that ever faced human civilization: how could governments justify the treatment of its subjects, people, as property? In 1862, Russia abolished serfdom, a form of human bondage that had existed in its territories since the 11th century. Just a year later, in 1863, Abraham Lincoln signed the Emancipation Proclamation, declaring America's slaves then, thenceforward, and forever free. What forces, both domestic and international, both political and cultural, influenced this near simultaneous awakening in which huge swaths of the Russian and U.S. populations were liberated?
While scholars have often sought to compare slavery and serfdom as institutions, this course does not attempt to draw connections between the two. Rather, we will focus on how the slavery/anti-slavery and serfdom/anti-serfdom debates were framed in each respective country as well as how Russia used American slavery and the U.S. used Russian serfdom to shape their own domestic debates.

COML 150 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional "fog of war" describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war's traditional dependence on declaration is often warped by language games--"police action," "military intervention," "nation-building" or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terror or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation--propaganda, nationalist messaging, memorialization, xenophobic depiction--affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war's shaping influence? The class will concentrate on literary objects--short stories, and graphic novels--as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

COML 151 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

COML 191 World Literature
How do we think "the world" as such? Globalizing economic paradigms encourage one model that, while it connects distant regions with the ease of a finger-tap, also homogenizes the world, manufacturing patterns of sameness behind simulations of diversity. Our current world-political situation encourages another model, in which fundamental differences are held to warrant the consolidation of borders between Us and Them, "our world" and "theirs." This course begins with the proposal that there are other ways to encounter the world, that are politically compelling, ethically important, and personally enriching—and that the study of literature can help tease out these new paths. Through the idea of World Literature, this course introduces students to the appreciation and critical analysis of literary texts, with the aim of navigating calls for universality or particularity (and perhaps both) in fiction and film. "World literature" here refers not merely to the usual definition of "books written in places other than the US and Europe," but any form of cultural production that explores and pushes at the limits of a particular world, that steps between and beyond worlds, or that heralds the coming of new worlds still within us, waiting to be born. And though, as we read and discuss our texts, we will glide about in space and time from the inner landscape of a private mind to the reaches of the farthest galaxies, knowledge of languages other than English will not be required, and neither will any prior familiarity with the literary humanities. In the company of drunken kings, botanical witches, ambisexual alien lifeforms, and storytellers who've lost their voice, we will reflect on, and collectively navigate, our encounters with the faraway and the familiar—and thus train to think through the challenges of concepts such as translation, narrative, and ideology. Texts include Kazuo Ishiguro, Ursula K. LeGuin, Salman Rushdie, Wemer Herzog, Jamaica Kincaid, Russell Hoban, Hiroshi Teshigahara, Arundhati Roy, and Abbas Kiarostami.

COML 203 Masterpieces-Italian Literature
This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante's Divine Comedy, Petrarca's love poems, and Boccaccio's Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli's political theory and Ariosto's epic poem), and then through Romanticism ( Leopardi's lyric poetry and Manzoni's historical novel), up to the 20th century (from D'Annunzio's sensual poetry to Calvino's post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203.
Course usually offered in spring term
Also Offered As: ITAL 203

COML 204 Tolstoy
This course consists of three parts. The first, How to read Tolstoy? deals with Tolstoy's artistic stimuli, favorite devices, and narrative strategies. The second, Tolstoy at War, explores the author's provocative visions of war, gender, sex, art, social institutions, death, and religion. The emphasis is placed here on the role of a written word in Tolstoy's search for truth and power. The third and the largest section is a close reading of Tolstoy's masterpiece The War and Peace (1863-68) a quintessence of both his artistic method and philosophical insights.

COML 205 The Religious Other
Course explores attitudes toward monotheists of other faiths, and claims made about these "religious Others" in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of "othering" will be analyzed through an exploration of claims about the Other's body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English.

COML 206 Italian History on Screen; How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy's rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multilayered as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy.

Activity: Seminar
1 Course Unit

COML 209 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian texts from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporaneous nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owen, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

COML 212 Modern Middle Eastern Literature in Translation
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course-Arabic, Hebrew, Persian and Turkish-will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes such as modernity, social values, the individual and national identity-as reflected in the genres of poetry, the novel, and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students' literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English.

COML 213 Saints and Devils in Russian Literature
This course is about Russian literary imagination, which is populated with saints and devils, believers and religious rebels, holy men and sinners. In Russia, where people's frame of mind had been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Is humility the way to salvation? Should one live for God or for the people? Does God even exist?

COML 220 Russia and the West
This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life - Revolutions, educational system, public executions, resorts, etc. - within the context of Russian intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historiographical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussions, short writing assignments, and two in-class tests.

1 Course Unit

**COML 230 Words Are Weapons: Protests and Political Activism in South Asian Literature**
This course focuses on the key themes of protest and resistance in contemporary South Asian literature. Most South Asian countries have been witnessing an endless wave of protests and resistance from various sections of public life for the last three decades. In India, for example, protest literature emerges not only from traditionally marginalized groups (the poor, religious and ethnic minorities, depressed castes and tribal communities), but also from upper-caste groups, whose protest literature expresses concerns over economic oppression, violence and the denial of fundamental rights. Literature is becoming an immediate tool to articulate acts of resistance and anger, as many writers and poets are also taking on new roles as political activists. In this class, we will read various contemporary works of short fiction, poetry and memoirs to comprehend shifts in public life toward political and social activism in South Asia. We will also watch two or three documentaries that focus on public protests and resistance. No prerequisites or South Asian language requirements. All literary works will be read in English translations.

**COML 235 Medieval Russia: Origins of Russian Cultural Identity**
This course offers an overview of the cultural history of Rus from its origins to the eighteenth century, a period which laid the foundation for the Russian Empire. The course takes an interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodox viewed in a broader European context. Although this course is historical in content, it is also about modern Russia. The legacy of Medieval Rus is still referenced, often allegorically, in contemporary social and cultural discourse as the Russian, Ukrainian and Belarusian societies attempt to reconstruct and reinterpret their histories. In this course, students learn that the study of the medieval cultural and political history explains many aspects of modern Russian society, its culture and mentality, understanding of the region and its people.

**COML 236 Napoleonic Era and Tolstoy**
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel?

**COML 241 Global Sustainableities**
This research-oriented seminar focuses on the ways in which "sustainability" and "sustainable development" are linguistically and culturally translated into the world’s languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn’s diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world’s languages of sustainability.

COML 247 Free Radicals: Marx, Marxism, and the Culture of Revolution
“A spectre is haunting Europe—the spectre of Communism”: This, the famous opening line of The Communist Manifesto, will guide this course’s exploration of the history, legacy, and potential future of Karl Marx’s most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seem to counter or exploit various tendencies of the time; how they align with the work of Nietzsche, Freud, and other radical thinkers to follow; and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx’s ideas might still hold in a world vastly different from his own.

COML 253 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This seminar will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

COML 255 Russian Thinkers
This class focuses on the complex relations between philosophy, history, and art in Russia and offers discussions of works of major Russian authors (such as Dostoevsky, Tolstoy, Khlebnikov), religious and political thinkers (Chaadaev, Herzen, Berdiaev, Lenin, Bogdanov), avant-garde artists (Filonov, Malevich) and composers (Skrabin) who created and tested in their lives their own, sometimes very peculiar and radical, worldviews. We will consider these worldviews against a broad cultural background and will reenact them in class in the form of philosophical mini-dramas. The only prerequisite for this course is intellectual curiosity and willingness to embrace diverse, brave and often weird ideas.

COML 256 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

COML 257 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) – in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy. Graduate students have additional readings and meetings.
Taught by: Fishman
One-term course offered either term
Also Offered As: JWST 153, NELC 158, NELC 458, RELS 223
Activity: Seminar
1 Course Unit

COML 259 Jewish Humor
In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestation of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, Jewish humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be collecting project of Jewish jokes.
For BA Students: Arts and Letters Sector
Taught by: Ben-Amos
One-term course offered either term

1 Course Unit

COML 265 Jewish Films and Literature
From the 1922 silent film “Hungry Hearts” through the first “talkie,” “The Jazz Singer” produced in 1927, and beyond “Schindler’s List” Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare’s “King Lear” to Sholom Aleichem’s “Tveye the Dairyman,” primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we “read” literature and film, b) the various ways that the media of fiction, drama, and film “translate” Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.
Taught by: Hellerstein
Course usually offered in spring term
Also Offered As: GRMN 261, JWST 261
Activity: Lecture
1 Course Unit

COML 266 Introduction to Modern Hebrew Literature
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story, reinvented literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold

Also Offered As: JWST 259, NELC 259, NELC 559
Prerequisites: Hebrew 054 or the equivalent, per instructor’s evaluation
Activity: Seminar
1 Course Unit

COML 269 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1,000 films during the Nazi era. In Italy, Mussolini, too, declared cinema “the strongest weapon.” This course explores the world of “fascist” cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.
For BA Students: Arts and Letters Sector
Taught by: MacLeod
Course not offered every year

Activity: Lecture
1 Course Unit
Notes: All discussions and readings in English.
COML 270 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film’s place in its historical and political context, the course will explore the “Golden Age” of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to “Papa’s Kino” and the rise of New German Cinema in the late 1960’s.

The course explores an aspect of 20th-century poetry intensively; specific course topics will vary from year to year.
Also Offered As: ENGL 262
Activity: Seminar
1 Course Unit

COML 277 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers “immigrate” from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.
For BA Students: Arts and Letters Sector
Taught by: Hellerstein
One term course offered either term
Also Offered As: GRMN 263, JWST 261
Activity: Lecture
1 Course Unit

COML 280 Italian Cinema
The course will consist of a broad and varied sampling of classic Italian films from WWII to the present. The curriculum will be divided into four units: (1) The Neorealist Revolution, (2) Metacinema, (3) Fascism and War Revisited, and (4) Postmodernism or the Death of the Cinema. One of the aims of the course will be to develop a sense of “cinematic literacy”– to develop critical techniques that will make us active interpreters of the cinematic image by challenging the expectations that Hollywood has implanted in us: that films be action-packed wish-fulfillment fantasies. Italian cinema will invite us to re-examine and revise the very narrow conception that we Americans have of the medium. We will also use the films as a means to explore the postwar Italian culture so powerfully reflected, and in turn, shaped, by its national cinema. Classes will include close visual analysis of films using video clips and slides. The films will be in Italian with English subtitles and will include works of Fellini, Antonioni, De Sica, Visconti, Pasolini, Wertuller, Rossellini, Rossellini, Bertolucci and Moretti.
Course not offered every year
Also Offered As: CIMS 340
Activity: Seminar

Activity: Seminar
1 Course Unit

COML 282 Modern Hebrew Literature and Culture in Translation
This course follows and analyzes the transformations in Israeli literature cinema. The focus and the specific topic of the study changes from semester to semester. Topics include: The Holocaust; The Image of Childhood; Dream, Fantasy and Madness; Love and War; The Many Voices of Israel; The Image of City; and other topics. While Israeli works constitute much of the course’ material, European and American film and fiction play comparative roles. 5 film screenings per semester; The content of this course changes from semes to semester, and therefore, students may take it for credit more than once. This topic course explores aspects of Hebrew Literature, Film, and Culture. Specific course topics vary from semester to semester. See the Cinema and Media Studies (...NELC, JWST, ENGL, COML) website for a description of the current offerings.
For BA Students: Arts and Letters Sector

1 Course Unit

COML 283 Jewish Folklore in Literature
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migration of Jews into different countries and historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.
Taught by: Ben-Amos
Course not offered every year
Also Offered As: FOLK 280, JWST 260, NELC 258
Activity: Lecture
1 Course Unit
COML 287 Ethnic Humor
Humor in ethnic societies has two dimensions: internal and external. The inside humor of an ethnic group is accessible to its members; it draws upon their respective social structures, historical and social experiences, languages, cultural symbols, and social and economic circumstances and aspirations. The external humor of an ethnic group targets members of other ethnic groups, and draws upon their stereotypes, and attributed characteristics by other ethnic groups. The external ethnic humor flourishes in immigrant and ethnically heterogeneous societies. In both cases jokes and humor are an integral part of social interaction, and in their performance relate to the social, economic, and political dynamics of traditional and modern societies.
Taught by: Ben-Amos, D.

Activity: Seminar
1 Course Unit

COML 300 Topics in Italian History, Literature, and Culture
Topics vary. Please check the department's website for course description: http://www.sas.upenn.edu/comlit/
Course not offered every year
Also Offered As: CIMS 300, ENGL 231, ITAL 300
Activity: Seminar
1 Course Unit
Notes: This is a topics course. Topics will vary from year to year.

COML 301 Handschrift-Hypertext: Deutsche Medien
This course will provide an introduction to German-language literary studies through exemplary readings of short forms: fables, fairy tales, aphorisms, stories, novellas, feuilletons, poems, songs, radio plays, film clips, web projects and others. Paying particular attention to how emergent technology influences genre, we will trace an evolution from Minnesang to rock songs, from early print culture to the internet age and from Handschrift to hypertext. Students will have ample opportunity to improve their spoken and written German through class discussion and a series of internet-based assignments. Readings and discussions in German.
For BA Students: Arts and Letters Sector
Course usually offered summer term only
Also Offered As: GRMN 301
Prerequisites: GRMN 203 is a prerequisite.
Activity: Lecture
1 Course Unit
Notes: This course will be offered every spring semester. Taught in German.

COML 302 Odyssey & Its Afterlife
As an epic account of wandering, survival, and homecoming, Homer's Odyssey has been a constant source of themes and images with which to define and redefine the nature of heroism, the sources of identity, and the challenge of finding a place in the world.
Taught by: Mumaghan
Course usually offered in spring term
Also Offered As: CLST 302
Activity: Lecture
1 Course Unit

COML 304 Topics in Literary Theory
This is a topics course. The topic could be "Freud" or "1913."
Taught by: Rabate
Course not offered every year
Also Offered As: CLST 360, ENGL 229, GSWS 228
Activity: Seminar
1 Course Unit
COML 322 Advanced Topics in Global Gender and Sexuality Studies
How do sex and gender become sites of cultural production, identity-formation, and contentious politics? This seminar engages these questions in the context of the "Middle East" as a constructed geopolitical space for imperial politics and political intervention. The class is divided into three units. In the first unit, we engage feminist and queer theories to discuss the shifting meanings of "sex" and "gender" in transnational and postcolonial contexts. In the second unit we explore the contextual and shifting notions of "private" and "public" as they have been elaborated in political theory, feminist theory, and media studies. We also consider how different media technologies enable and constrain the performance and expression of gender and sexual identities. In the last unit, we examine the material and symbolic construction of sex and gender in the shadow of Orientalism, the War on Terror, Multiculturalism, and the recent Arab uprisings. In this unit, we consider how geopolitics are refracted in public controversies around issues like gay rights, female genital mutilation, the veil, and honor killing.
Also Offered As: GSWS 322, SOCI 322
Activity: Seminar
1 Course Unit

COML 324 Sanskrit Literature in Translation
This course will focus solely on the specific genres, themes, and aesthetics of Sanskrit literature (the hymn, the epic, the lyric, prose, drama, story literature, the sutra, etc.) and a study of the history and specific topics of Sanskrit poetics and dramaturgy. All readings will be in translation.
Taught by: Patel
Course not offered every year
Also Offered As: COML 624, SAST 324, SAST 624
Activity: Seminar
1 Course Unit

COML 333 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in the original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.
Taught by: Brownlee
One-term course offered either term
Also Offered As: ENGL 323, ITAL 333
Activity: Seminar
1 Course Unit

COML 334 A Survey of Sanskrit, Pāṇḍīrī, and Classical Tamil Literature in Translation
This course will cover most of the genres of literature in South Asia's classical languages through close readings of selections of primary texts in English translation. Special focus will be given to epics, drama, lyric poetry, satirical works, and religious literature.
Taught by: Patel
Course not offered every year
Also Offered As: SAST 334
Activity: Seminar
1 Course Unit

COML 340 Descent to the Underworld in Ancient Near-Eastern and Western Literature
From antiquity to the present the hero's journey to the underworld, or the land of the dead, has offered poets and philosophers a metaphor to express our search for life's meaning. In antiquity that meaning was to be found by an extraordinary individual in a heroic quest beyond the grave. In this course we will consider various interpretations what of this katabasis means within the context of our everyday struggle to find meaning.
Taught by: Foley
Course not offered every year
Also Offered As: CLST 339, NELC 339
Activity: Seminar
1 Course Unit

COML 341 Masculinity in French Literature
Why was a portrait depicting the Renaissance king Francois I as halfman, half-woman made with royal approval, and moreover intended to represent the king as the perfect embodiment of the ideal qualities of a male sovereign? And why, in what is now regarded as the official portrait of Louis XIV, does the king prominently display his silk stockings and high heels with diamond-encrusted buckles? These are just two examples of the questions that lead us to the point of departure for this course: the idea that masculinity is not a fixed essence that has existed since time immemorial, but rather a flexible concept that changes across and even within historical periods.
Taught by: Francis
Also Offered As: FREN 341, GSWS 343
Activity: Seminar
1 Course Unit

COML 343 Nineteenth Century European Intellectual History
Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.
Taught by: Breckman
Course usually offered in fall term
Also Offered As: HIST 343
Activity: Lecture
1 Course Unit

COML 344 20th Century European Intellectual History
European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.
Taught by: Breckman
Course usually offered in spring term
Also Offered As: HIST 344
Activity: Lecture
1 Course Unit
COML 353 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course is taught in translation.
Taught by: Fakhreddine
Course usually offered in fall term
Also Offered As: COML 505, NELC 434
Activity: Lecture
1 Course Unit

COML 355 Topics in Modernism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year.
One-term course offered either term
Also Offered As: ENGL 359
Activity: Seminar
1 Course Unit

COML 357 Myth in Society
In this course we will explore the mythologies of selected peoples in the Ancient Near East, Africa, Asia, and Native North and South America and examine how the gods function in the life and belief of each society. The study of mythological texts will be accompanied, as much as possible, by illustrative slides that will show the images of these deities in art and ritual.
Taught by: Ben-Amos
Course not offered every year
Also Offered As: FOLK 229, NELC 249
Activity: Lecture
1 Course Unit

COML 359 Seminar Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop critical reading skills in the general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendants," autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in spring term
Also Offered As: HEBR 359, HEBR 659, JWST 359, JWST 556
Prerequisites: Hebrew 059 or the equivalent, per instructor's evaluation
Activity: Seminar
1 Course Unit

COML 372 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics,...).
Taught by: Met
Course not offered every year
Also Offered As: CIMS 382, FREN 382
Activity: Lecture
1 Course Unit

COML 378 Topics in Literature and Society
This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 293
Activity: Seminar
1 Course Unit

COML 380 The Bible in Translation
This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. "The Bible in Translation" involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. No prerequisites are required.
Taught by: Cranz
One-term course offered either term
Also Offered As: JWST 255, NELC 250, NELC 550, RELS 224
Activity: Seminar
1 Course Unit
COML 383 Topics in Literary Theory
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. The first half of the course will focus on early periods: Greek and Roman antiquity, especially Plato and Aristotle; the medieval period (including St. Augustine, Dante, and Boccaccio), and the early modern period (such as Philip Sidney and Giambattista Vico). We'll move into modern and 20th century by looking at the literary (or "art") theories of some major philosophers, artists, and poets: Kant, Hegel, Shelley, Marx, the painter William Morris, Freud, and the critic Walter Benjamin. We'll end with a look at Foucault's work. The point of this course is to consider closely the Western European tradition which generated questions that are still with us, such as: what is the "aesthetic"; what is "imitation" or mimesis; how we are to know an author's intention; and under what circumstances should literary texts ever be censored.
Taught by: Copeland
Course not offered every year
Also Offered As: CLST 396, ENGL 394
Activity: Seminar
1 Course Unit
Notes: Benjamin Franklin Seminar

COML 384 Holocaust in Italian Literature and Film

Also Offered As: CIMS 387, ITAL 384
Activity: Seminar
1 Course Unit
Notes: Holocaust in Italian Literature and Film

COML 385 Japanese Theatre
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theatre in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. Requirements include short writing assignments, presentations, and one research paper. Reading knowledge of Japanese and/or previous course work in literature/theatre will be helpful, but not required. The class will be conducted in English, with all English materials.
Taught by: Kano
Course usually offered in fall term

Activity: Seminar
1 Course Unit

COML 390 Introduction to Spanish American Literature
Topics vary.
Course usually offered in fall term
Also Offered As: LALS 396, SPAN 390
Prerequisite: SPAN 219
Activity: Seminar
1 Course Unit

COML 391 Topics Film Studies
This topic course explores aspects of Cinema Studies intensively. Specific course topics vary from year to year. See the COML website at <http://complit.upenn.edu/> for a description of the current offerings.
Course not offered every year
Also Offered As: ARTH 389, CIMS 392, ENGL 392
Activity: Seminar
1 Course Unit

COML 392 Topics in Postcolonial Lit
This course explores an aspect of Postcolonial literature intensively; specific course topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 393, SAST 323
Activity: Seminar
1 Course Unit
Notes: Benjamin Franklin Seminar

COML 399 Independent Study
Supervised study for Juniors.
One-term course offered either term
Activity: Independent Study
1 Course Unit

COML 411 Introduction to Written Culture, 14th - 16th Centuries
This is a topics course. Please see the Comparative Literature website for each semester’s topic: http://ccat.sas.upenn.edu/Complit/
Taught by: Chartier/Stallybrass
One-term course offered either term
Also Offered As: ENGL 234, HIST 411
Activity: Seminar
1 Course Unit

COML 415 Medieval Islamic Art and Architecture
An introduction to the major architectural monuments and trends, as well as to the best-known objects of the medieval (seventh-to-fourteenth-century) Islamic world. Attention will be paid to such themes as the continuity of late antique themes, architecture as symbol of community and power, the importance of textiles and primitiveness of writing. Suitable for students of literature, history, anthropology as well as art history.
Taught by: Holod
One-term course offered either term
Also Offered As: AAMW 435, ARTH 435, NELC 489
Activity: Lecture
1 Course Unit

COML 416 European Intellectual History in the 18th Century
A survey based solely on primary sources of the main currents of eighteenth-century European thought: the "Enlightenment," deism; natural religion; skepticism; evangelical revival; political reform; utilitarianism; naturalism; and materialism. The course will focus on works widely-read in the eighteenth century and of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make eighteenth-century thought accessible in its context to the twenty-first century.
Taught by: Kors
Course usually offered in spring term
Also Offered As: HIST 416
Activity: Lecture
1 Course Unit

COML 418 Europe Intellectual History Since 1945
This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Sartre's concept of the 'engagement' to Foucault's idea of the 'specific intellectual'; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over 'postmodernity.' Taught by: Breckman
Course usually offered in spring term
Also Offered As: HIST 418
Activity: Seminar
1 Course Unit
COML 419 European Intellectual History of the Seventeenth Century
A survey based solely on primary sources of the main currents of seventeenth-century European thought: the criticism of inherited systems and of the authority of the past; skepticism, rationalism; empiricism; and the rise of the new natural philosophy. We will study deep conceptual change as an historical phenomenon, examining works that were both profoundly influential in the seventeenth-century and that are of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make seventeenth-century thought accessible in its context to the twenty-first century student.
Taught by: Kors
Also Offered As: HIST 415
Activity: Lecture
1 Course Unit

COML 498 Honors Thesis
One term course offered either term
Activity: Independent Study
1 Course Unit

COML 499 Independent Study
Supervised study for Seniors.
One term course offered either term
Activity: Independent Study
1 Course Unit

COML 501 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the professional study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism.
Course usually offered in fall term
Also Offered As: CLST 511, ENGL 601, GRMN 534, SLAV 500
Activity: Seminar
1 Course Unit

COML 504 Electronic Literary Studies Proseminar
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by recent technological innovation.
Course not offered every year
Also Offered As: ARTH 506, CIMS 505, ENGL 505
Activity: Seminar
1 Course Unit

COML 505 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on Western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course is taught in translation.
Taught by: Fakhreddine
Course usually offered in fall term
Also Offered As: COML 353, NELC 434
Activity: Lecture
1 Course Unit

COML 506 Topics in Twentieth-Century Literature
This course treats some aspect of literary and cultural politics in the 20th-Century with emphasis varying by instructor.
Course not offered every year
Also Offered As: ENGL 461
Activity: Seminar
1 Course Unit

COML 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products.
Taught by: Hellerstein
One term course offered either term
Also Offered As: ENGL 591, GRMN 509, JWST 509, YDSH 509
Activity: Seminar
1 Course Unit
COML 510 Medieval Education: History, Practices, Texts
This course will cover various important aspects of education and intellectual culture from late antiquity (c. 400 A.D.) to the later Middle Ages (c. 1400 A.D.) across Europe. We will look especially at how the arts of language (grammar, rhetoric, dialectic) were formalized and "packaged" in late antique/early medieval encyclopedias (e.g., Martianus Capella's "Marriage of Mercury and Philology," Cassiodorus' "Institutes of Divine and Secular Learning," Boethius and Augustine on rhetoric, Donatus and Priscian on grammar, Boethius on dialectic, Isidore of Seville on all the sciences), and at how later theorists and systematizers recombined and reconfigured knowledge systems for new uses (especially monastic education, including notably Hugh of St. Victor's "Didascalicon"). We will also look at how the earlier and later Middle Ages differentiated between "primary" and "advanced" education, how children and childhood are represented in educational discourse, how women participate in (or are figured in) intellectual discourse (Eloise, Hildegard of Bingen, Christine de Pizan), how universities changed ideas of intellectual formation, and how vernacular learning in the later Middle Ages added yet another dimension to the representation of learning.
Taught by: Copeland
Course not offered every year
Also Offered As: ARTH 505, CIMS 502
Activity: Lecture
1 Course Unit

COML 518 Old Church Slavonic: History, Language, Manuscripts
Taught by: Verkholantsév
Course not offered every year
Also Offered As: RUSS 518
Activity: Seminar
1 Course Unit

COML 519 Translating Literature: Theory and Practice
Taught by: Hellerstein
Also Offered As: GRMN 537
Activity: Seminar
1 Course Unit

COML 522 Chaucer
An advanced introduction to Chaucer's poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer's development as a narrative artist.
Taught by: Wallace
Course not offered every year
Also Offered As: ENGL 525, GWS 524
Activity: Seminar
1 Course Unit

COML 523 The Trouble with Freud
For professionals in the field of mental care, Freud's work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.
Taught by: Weissberg
Course not offered every year
Also Offered As: GRMN 526
Activity: Seminar
1 Course Unit
Notes: Reading and discussions in English.

COML 524 Petrarch
This course will study Petrarch's lyric poetry with reference to its Italian roots (Sicilian school, dolce stil nuovo) and European posterity. Renaissance and Baroque Petrarlish as well as impingement on the Romantics.
Taught by: Brownlee
Course not offered every year
Also Offered As: ITAL 535
Activity: Seminar
1 Course Unit

COML 525 Theories: Gender, and Sexuality Studies
Theories in Gender and Sexuality: Objects, Ideas, Institutions foregrounds new works in feminist thinking which circumvent and resist stale modes of teaching, in learning and knowing difference and "the woman question." Our aim is to interrogate the normative directionality of feminist "waves" and additive and intersectional models of suturing gender and sexuality to minority politics. We will conceptualize feminism as relational to studies of affect, object oriented ontology animality, feminist science, and aesthetics.
Course not offered every year
Also Offered As: GSWS 526
Activity: Seminar
1 Course Unit

COML 529 Black Cinema
This course treats some important aspect of African-American literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance.
Course not offered every year
Also Offered As: AFRC 526, ARTH 504
Activity: Seminar
1 Course Unit

COML 533 Dante's Divine Comedy I
"Divine Comedy" in the context of Dante's medieval worldview and culture.
Taught by: Brownlee, K.
Course not offered every year
Also Offered As: ITAL 531
Activity: Seminar
1 Course Unit
COML 534 Words are Weapons
This course focuses on the key themes of protest and resistance in contemporary South Asian literature. Most South Asian countries have been witnessing an endless wave of protests and resistance from various sections of public life for the last three decades. In India, for example, protest literature emerges not only from traditionally marginalized groups (the poor, religious and ethnic minorities, depressed castes and tribal communities), but also from upper-caste groups, whose protest literature expresses concerns over economic oppression, violence and the denial of fundamental rights. Literature is becoming an immediate tool to articulate acts of resistance and anger, as many writers and poets are also taking on new roles as political activists. In this class, we will read various contemporary works of short fiction, poetry and memoirs to comprehend shifts in public life toward political and social activism in South Asia. We will also watch two or three documentaries that focus on public protests and resistance. No prerequisites or South Asian language requirements. All literary works will be read in English translations.
Course not offered every year
Also Offered As: COML 230, SAST 223, SAST 523
Activity: Lecture
1 Course Unit

COML 535 The Hindi Nation and its Fragments
This course will trace the formation and contestation of a Hindi national public during the colonial and post-colonial periods, utilizing the post-colonial critical thought of writers in English like Partha Chatterjee, Gayatri Spivak, and Ajaij Ahmed, but also of critics writing in Hindi like Namvar Singh, Ashok Vajpevi, Rajendra Yadav, etc. Attention will be given to this manner in which the contours and character of this imagined community have been debated in the context of different literary, social, and political movements, with particular emphasis given to aspects of gender, caste, and regional identity. Central to class discussions will be the question of what constitutes a language literature, and consequently what relation those concepts can have to nation in a multilingual state such as India. Readings will be in translation.
Taught by: Williams
Course offered spring; odd-numbered years
Also Offered As: COML 226, SAST 527
Activity: Seminar
1 Course Unit

COML 537 Topics in Cultural History
An introduction to the practice and theory of epic in the early modern period. Specific texts vary with instructor.
Course not offered every year
Also Offered As: ARTH 584, GRMN 541
Activity: Seminar
1 Course Unit

COML 543 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought-stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighten our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).
Taught by: Richter
Course not offered every year
Also Offered As: GRMN 535
Activity: Seminar
1 Course Unit

COML 546 The Novel and Marriage
Historians have argued that early novels helped shape public opinion on many controversial issues. And no subject was more often featured in novels than marriage. In the course of the 18th and the 19th centuries, at a time when marriage as an institution was being radically redefined, almost all the best known novels explored happy as well as unhappy unions, individuals who decided not to marry as well as those whose lives were destroyed by the institution. They showcased marriage in other words in ways certain to provoke debate. We will both survey the development of the modern novel from the late 17th to the early 20th century and study the treatment of marriage in some of the greatest novels of all time. We will begin with novels from the French and English traditions, the national literatures in which the genre first took shape, in particular Laclos’ DANGEROUS LIAISONS, Austen’s PRIDE AND PREJUDICE, Bronte’s JANE EYRE, Flaubert’s MADAME BOVERY. We will then turn to works from the other European traditions such as Goethe’s ELECTIVE AFFINITIES and Tolstoy’s ANNA KARENINA. We will begin the course by discussing the novel often referred to as the first modern novel, THE PRINCESS DE CLEVES. This was also the first novel centered on an exploration of questions central to the debate about marriage for over two centuries.
Taught by: DeJean
Course not offered every year
Also Offered As: ENGL 546, FREN 537, GSWS 536, HIST 537
Activity: Seminar
1 Course Unit

COML 550 Stalinist Culture
This course will explore the cultural context in which the so-called Romantic Movement prospered, and will pay special attention to the relationship between the most notorious popular genres of the period (Gothic fiction and drama) and the poetic production of both canonical and emerging poets.
Taught by: Platt
Course not offered every year
Also Offered As: RUSS 549
Activity: Seminar
1 Course Unit
COML 554 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825.
Course not offered every year
Also Offered As: ENGL 553, GWS 553, RELS 531
Activity: Seminar
1 Course Unit

COML 558 Major Renaissance Writers
This course will look at Renaissance images of the Author, both in the visual arts (portraits in manuscripts, cycles of famous men, statuary, medals) and in the literary tradition, especially lives of the poets and defenses of poetry. Focusing on Homer, Virgil, and Ovid; Dante, Petrarch, Boccaccio and Renaissance women poets, it will reconstruct the author as an ideal figure, the inspired sage and prophet. We shall discuss legend and literary canon formation, considering how poets are analogous to saints in their cults and the folkloristic anecdotes that grow up around them. The figure of the poet as constructed by different historical eras will be studied with reference to theories of literature as they developed from the Middle Ages to the early modern period.
Course not offered every year
Also Offered As: ENGL 539, GWS 538
Activity: Seminar
1 Course Unit

COML 559 Topics in Philosophy and Literature
This is a topics course. Please see the Comparative Literature website for the topic: http://ccat.sas.upenn.edu/Complit/.
Course usually offered in spring term

Notes: This is a topics course.

COML 562 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment.
Taught by: Wiggins
Course not offered every year
Also Offered As: ANTH 543, GRMN 544, URBS 544
Activity: Seminar
1 Course Unit

COML 564 Modern British Literature
An introduction to British Literary Modernism. Specific emphasis will depend on instructor.
Course not offered every year
Also Offered As: ENGL 564
Activity: Seminar
1 Course Unit

COML 570 Topics in Criticism and Theory
Taught by: MacLeod
Course not offered every year
Also Offered As: ARTH 573, CIMS 515, ENGL 573, GRMN 573
Activity: Seminar
1 Course Unit
Notes: This course covers topics in literary criticism and theory. It’s specific emphasis varying with instructor.

COML 572 Art, Artists and Society
Course usually offered in spring term
Also Offered As: CPLN 573
Activity: Seminar
1 Course Unit

COML 575 Topics in African Literature
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions extended writers in their use of old forms and experiments with new.
Taught by: Bamard

COML 577 20th Century Poetry
Taught by: Bernstein
Course not offered every year
Also Offered As: ENGL 589
Activity: Seminar
1 Course Unit

COML 579 Slavic Literary Theory in Western Context
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.
Taught by: Steiner, P
Course not offered every year
Also Offered As: SLAV 575
Activity: Seminar
1 Course Unit
COML 580 Introduction to Bibliography
This course offers an introduction to the principles of descriptive and
analytic bibliography and textual editing. The history of authorship,
manuscript production, printing, publishing, and reading will be addressed
as they inform an understanding of how a particular text came to be the
way it is. Diverse theories of editing will be studied and put into practice
with short passages. This course is generally suitable for students
working in any historical period, but particular emphases specified in the
current offerings on the English website. www.english.upenn.edu
Course offered fall; even-numbered years
Also Offered As: ENGL 574, HIST 574
Activity: Seminar
1 Course Unit

COML 582 Topics in Aesthetics
This is a topics course. Please see the Comparative Literature website for
descriptions.
Course usually offered in fall term
Also Offered As: ARTH 560, GRMN 580, PHIL 480
Activity: Seminar
1 Course Unit
Notes: This is a topics course.

COML 584 Topics in Jewish-German Culture
Reading and discussion course on selected topics in Jewish history.
The instructors are visiting scholars at the Center for Advanced Judaic
Studies.
Course not offered every year
Also Offered As: GRMN 581
Activity: Seminar
1 Course Unit

COML 586 Topics in Twentieth Century Art
This seminar will examine the ideas of a number of influential theorists
in a variety of disciplines who have contributed to the ways in which
we understand and evaluate art. A tentative and flexible list includes:
Kant, Denis, Fry, Greenberg, Schapiro, de Bord, Derrida, Lacan, Kristeva,
Baudrillard.
Taught by: Poggi
One-term course offered either term
Also Offered As: ARTH 586
Activity: Seminar
1 Course Unit

COML 589 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th-
and 20th-century French literature. A variety of approaches — thematic,
psychoanalytic, cultural, narratological — will be used in an attempt to
test their viability and define the subversive force of a literary mode that
contributes to shedding light on the dark side of the human psyche by interrogating the "real" making visible the unseen and articulating the
unsaid. Such broad categories as distortions of space and time, reason
and madness, order and disorder, sexual transgressions, self and other
will be considered. Readings will include "recits fantastiques" by Merime,
Gautier, Nerval, Maupassant, Breton, Mandiargues, Jean Ray and others.
Course not offered every year
Also Offered As: FREN 582
Activity: Seminar
1 Course Unit

COML 590 Recent Issues in Critical Theory
This course is a critical exploration of recent literary and cultural
texts, usually focusing on one particular movement or school, such as
phenomenology, psychoanalysis, the Frankfurt School, or deconstruction.
Course not offered every year
Also Offered As: CIMS 580, ENGL 590, GSWS 589, LALS 590
Activity: Seminar
1 Course Unit

COML 592 Topics in Contemporary Theory
Course not offered every year
Also Offered As: CIMS 592, ENGL 592
Activity: Seminar
1 Course Unit
Notes: This is a topics course.

COML 593 Modern and Contemporary Italian Culture
This is a topics course. One topic may be "Futurism, Classicism, Fascism"
or "Philology and History." Please see the Comparative Literature website
for the description.
Course not offered every year
Also Offered As: ITAL 581
Activity: Seminar
1 Course Unit

COML 595 Introduction to Francophone Studies
An introduction to major literary movements and authors from five areas
of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean
and Quebec.
Course not offered every year
Also Offered As: AFRC 590, FREN 590
Activity: Seminar
1 Course Unit

COML 601 Topics Medieval Studies
An interdisciplinary course, it will utilize literary practices to "read" the
ways specific texts produce sexuality at the same time as it will examine
the relation between discourses and the material and political worlds in
which those discourses are spoken. We will examine the role sexuality
plays in the languages of imperialism and in the sexualization of political
rhetoric. The course will explore theoretical approaches to sexuality
(and its discursive construction) proposed by Freud, Foucault, Sander
Gilman, Gayle Rubin, Teresa de Lauretis, Mary Douglas, and examine a
broad range of "primary materials" from eighteenth-century novels and
pornography to nineteenth-century sexology to current feminist and
political debates.
Taught by: Copeland
One-term course offered either term
Also Offered As: CLST 618, ENGL 524
Activity: Seminar
1 Course Unit

COML 602 Historiography and Methodologies
Theories and models of historical investigation. Analysis of
historiographic writings and musico-cultural works exemplifying particular
approaches, such as transnational, environmental/landscape, gender/
sexuality, critical race studies, performance studies, archives, and the
digital humanities.
Taught by: Calcagno, Caldwell, Goodman
Course not offered every year
Also Offered As: ITAL 602, MUSC 604
Activity: Seminar
1 Course Unit
COML 606 Ancient Literary Theory  
Course not offered every year  
Also Offered As: ENGL 705, GREK 602  
Activity: Seminar  
1 Course Unit  

COML 608 Global France  
Please see the Comparative Literature website for description.  
Taught by: Richman  
Course not offered every year  
Also Offered As: FREN 609

Course not offered every year  
Also Offered As: ITAL 601  
Activity: Seminar  
1 Course Unit  

COML 618 Medieval Poetics  
This course may include some of the following fields: studies of medieval  
stylistic practices, formal innovations, and theories of form; medieval  
ideas of genre and form; medieval thought about the social, moral,  
and epistemological roles of poetry; interpretive theory and practice;  
technologies of interpretation; theories of fiction (fabula) and allegory;  
sacred and secular rhymatics; theories of language and the histories  
of the language arts; vernacular(s) and Latinity; material texts.  
Course not offered every year  
Also Offered As: CLST 628, ENGL 721  
Activity: Seminar  
1 Course Unit  

COML 620 Semester in 18th Century Literature  
This course varies in its emphases, but in recent years has explored the  
theory of narrative both from the point of view of eighteenth-century  
ovelists and thinkers as well as from the perspective of contemporary  
theory. Specific attention is paid to issues of class, gender, and ideology.  
Course usually offered in fall term  
Also Offered As: ENGL 748, FREN 660  
Activity: Seminar  
1 Course Unit  

COML 621 Topics in European History  
Reading and Discussion course on selected topics in European History.  
Taught by: Verkholyantsev  
Course not offered every year  
Also Offered As: HIST 620, RUSS 618  
Activity: Seminar  
1 Course Unit  

COML 622 Postmodernism  
An advanced seminar on postmodernist culture. Recently offered as a  
study of relationship between poetry and theory in contemporary culture,  
with readings in poststructuralist, feminist, marxist, and postcolonial  
theory and in poets of the Black Mountain and Language groups.  
Course not offered every year  
Also Offered As: ENGL 774  
Activity: Seminar  
1 Course Unit  

COML 623 Literary History and Aesthetics in South Asia  
This seminar surveys the multiple components of literary culture in South  
Asia. Students will engage critically with selected studies of literary  
history and aesthetics from the past two millennia. In order to introduce  
students to specific literary cultures (classical, regional, contemporary)  
and to the scholarly practices that situate literature in broader contexts  
of culture and society, the course will focus both on the literary theories  
- especially from the nineteenth and twentieth centuries - that position  
South Asia's literary cultures within broader disciplinary frameworks that  
use literary documents to inform social, historical and cultural research  
projects. The aim is to open up contexts whereby students can develop  
their own research projects using literary sources.  
Taught by: Patel  
Also Offered As: SAST 623  
Activity: Seminar  
1 Course Unit  

COML 625 Global Perspectives in French Studies  
This course explores the literary and literary landscapes of 19th-century  
Paris and Philadelphia, paying particular attention to the ways in which  
the built environment is shaped by and shapes shifting ideologies in  
the modern age. Although today the luxury and excesses of the "City  
of Light" may seem worlds apart from the Quaker simplicity of the  
"City of Brotherly Love," Paris and Philadelphia saw themselves as  
partners and mutual referents during the 1800s in many areas, from  
urban planning to politics, prisons to paleontology. This interdisciplinary  
seminar will include readings from the realms of literature, historical  
geography, architectural history, and cultural studies as well as site  
visits to Philadelphia landmarks, with a view to uncovering overlaps and  
resonances among different ways of reading the City. We will facilitate  
in-depth research by students on topics relating to both French and  
American architectural history, literature, and cultural thought.  
Taught by: Goulet/Wunsch  
Course not offered every year  
Also Offered As: FREN 620, HSPV 620  
Activity: Seminar  
1 Course Unit  

COML 627 South Asia Literature as Comparative Literature  
The extent to which the narrative reflexes of the novel can accommodate  
and express the nature of human work are explored primarily in a study  
of two nineteenth-century writers, Eliot and Hardy. Reading for the course  
also includes novels and short stories of other nineteenth-century writers  
(Dickens, Zola, tolstoy, Stowe, Melville), and background reading on the  
social and philosophic theory of work.  
Taught by: Goulding  
Course not offered every year  
Also Offered As: SAST 627  
Activity: Seminar  
1 Course Unit  

COML 630 Introduction to Medieval Literature  
Topics vary. Previous topics include The Grael and the Rose, Literary  
Genres and Transformations, and Readings in Old French Texts. Please  
see the department's website for current course description:  
One-term course offered either term  
Also Offered As: FREN 630  
Activity: Seminar  
1 Course Unit  
Notes: This is a topics course.
COML 643 Studies in the Renaissance
Topics vary. Previous topics have included Rabelais and M. de Navarre, Montaigne, and Renaissance and Counter-Renaissance. Please see department's website for current course description:

1 Course Unit

COML 682 Seminar on Literary Theory
Topics vary from year to year.
Course not offered every year
Also Offered As: ENGL 571, SPAN 682
Activity: Seminar
1 Course Unit

COML 683 Topics in Comparative Literature and Theory
This course has valuable content, addressing specific topics of broad, interdisciplinary concern in an innovative, multi-instructor format. The goal is to bring Penn students and faculty from a wide range of topics together around the study of theories, methods, periods and other common areas of interest in a shared intellectual space. Past topics have been "Modemism Across Borders," "Collective Violence, Trauma and Representation," and "Global Cultural Formations." The experimental seminar format devotes the first two hours of each three-hour class to discussion of readings selected in consultation with guest instructors from a range of Penn departments and programs, as well as nearby campuses. The third hour is devoted to a presentation and discussion of a work in progress, a project either of a member of the course, or of a guest. Guest instructors may appear for one or a few meetings. The course is coordinated by the convener(s) who are present for all the class meetings along with the guests. Students are encouraged to bring work in progress, either on the basis of past seminars or independent projects, to form the basis for their projects in the seminar.
Course not offered every year
Also Offered As: ARTH 783, SLAV 683
Activity: Seminar
1 Course Unit

COML 685 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.

Also Offered As: EALC 755
Activity: Seminar
1 Course Unit

COML 694 Spanish and Latin American Cinema
Topics vary from year to year.
Also Offered As: CIMS 694, SPAN 694
Activity: Seminar
1 Course Unit

COML 696 Postcolonial Theory in Francophone Contexts
This seminar will introduce students to key texts and influential figures coming from, focusing on, or relevant to Francophone postcolonial contexts. Following a brief review of Anglophone postcolonial criticism, readings for the course will fall under three categories: Authors from the 1940s to present who have focused exclusively on (post)colonial issues pertaining to Africa, the Caribbean and/or postcolonial France; contemporary European, African and North American literary critics; humanities scholars whose work would not necessarily be labeled "postcolonial" but is nevertheless relevant to postcolonial criticism.
Taught by: Moudieno
Course not offered every year
Also Offered As: FREN 696
Activity: Seminar
1 Course Unit

COML 700 African Literature and Society
An advanced seminar in anglophone African literature, possibly including a few works in translation.
One term course offered either term
Also Offered As: ENGL 775
Activity: Seminar
1 Course Unit

COML 710 Political Economy and Social History of Africa and the African Diaspora
This course provides the opportunity for students to investigate the relationship between the emergence of African peoples as historical subjects and their location within specific geopolitical and economic circumstances.
Taught by: Hanchard
Course not offered every year
Also Offered As: AFRC 710, LALS 710
Activity: Seminar
1 Course Unit
COML 714 Medieval Literature
This is a topics course. The topic may be "Women and Writing, 1220-1689," "Denationalizing the English Middle Ages," or "Anglo-French Literatures," or "Gloss and Commentary."
Course not offered every year
Also Offered As: CLST 610, ENGL 715
Activity: Seminar
1 Course Unit

COML 715 Seminar in Ethnomusicology
Topics in Ethnomusicology.
Taught by: Muller
Course usually offered in fall term
Also Offered As: GSWS 705, MUSC 705
Activity: Seminar
1 Course Unit

COML 730 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor.
Course not offered every year
Also Offered As: ENGL 730
Activity: Seminar
1 Course Unit

COML 734 Renaissance Drama
This is a topics course. For Spring 2015, the topic is Genre and Performative Media.
Taught by: Bushnell
Course not offered every year
Also Offered As: ENGL 734
Activity: Seminar
1 Course Unit
Notes: This is a topics course.

COML 736 Renaissance Studies
This is an advanced topics course treating some important issues in contemporary Renaissance studies.
Course not offered every year
Also Offered As: ENGL 736
Activity: Seminar
1 Course Unit

COML 737 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the Comparative Literature and Literary Theory Program's website for descriptions of the current offerings at http://ccat.sas.upenn.edu/Complit/
Also Offered As: ENGL 753
Activity: Seminar
1 Course Unit

COML 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with ‘the East’ (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past?
Course not offered every year
Also Offered As: ENGL 769, GSWS 769
Activity: Seminar
1 Course Unit

COML 780 Seminar in Theory
Seminar on selected topics in music theory and analysis.
Course offered spring; odd-numbered years
Also Offered As: GRMN 529, MUSC 780
Activity: Seminar
1 Course Unit

COML 781 Writing Sound—Sounding Literature
Seminar on selected topics in sound studies. Please see department website http://ccat.sas.upenn.edu/Complit/ for current term course descriptions.
Taught by: Waltham-Smith
One-term course offered either term
Also Offered As: MUSC 781
Activity: Seminar
1 Course Unit

COML 786 Topics in 20th Century Art
Topics vary from year to year.
Taught by: Poggi
Course not offered every year
Also Offered As: ARTH 786, ITAL 685
Activity: Seminar
1 Course Unit

COML 787 Topics in Contemporary Art
Topics vary each semester. Fall 2018: Since it was not translated into English until the mid 1960s, Walter Benjamin's Work of Art essay was slow to arrive in the English-speaking world, and when it did, it seemed part of the same zeitgeist as Guy Debord's The Society of the Spectacle, Roland Barthes The Rhetoric of the Image, and Louis Althusser's Ideology and Ideological State Apparatuses. This zeitgeist was deeply suspicious of popular images, and this suspicion was soon fortified from a feminist direction by Laura Mulvey's Visual pleasure and Narrative Cinema, and a postcolonial one by Frantz Fanon's Black Skin, White Masks. Benjamin's essay extended it to the kinds of images we generally find in museums, i.e., to what I will be calling pictures. This made the museum the primary target of institutional critique, and gave rise to what Hal Foster called the anti-aesthetic. It was against this backdrop that the so-called Pictures Generation emerged. This category was helpful at first, since it allowed us to look at things that would otherwise have been forbidden. It was based, however, on a misapprehension: the misapprehension that a picture means the same thing for Jeff Wall as it does for Cindy Sherman. Taught by Silverman
One-term course offered either term
Also Offered As: ARTH 794, ENGL 793
Activity: Seminar
1 Course Unit

COML 790 Recent Issues in Critical Theory
Course varies with instructor.
Course not offered every year
Also Offered As: ENGL 790, GSWS 790
Activity: Seminar
1 Course Unit
Notes: This is a topics course.

COML 795 Poetics
Topics in poetics will vary in its emphasis depending on the instructor.
Course not offered every year
Also Offered As: ENGL 795
Activity: Seminar
1 Course Unit
COML 981 M.A. Exam Prep
Course open to first-year Comparative Literature graduate students in preparation for required M.A. exam taken in spring of first year.
Course not offered every year
Activity: Seminar
1 Course Unit

COML 988 Independent Study and Research
Designed to allow students to pursue a particular research topic under the close supervision of an instructor.
One-term course offered either term
Activity: Independent Study
1 Course Unit

COML 999 Independent Reading and Research
May be taken for multiple course credit to a maximum of two for the M.A. and four for the Ph.D. Designed to allow students to broaden and deepen their knowledge of literary theory, a national literature, and/or an area of special interest.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Computer and Information Science (CIS)

CIS 099 Undergraduate Research/Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and techniques and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student must submit a detailed proposal, signed by the independent study supervisor, to the SEAS Office of Academic Programs (111 Towne) no later than the end of the “add” period.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: A maximum of 2 c.u. of CIS 099 may be applied toward the B.A.S. or B.S.E. degree requirements.

CIS 105 Computational Data Exploration
The primary goal of this course is to introduce computational methods of interacting with data. In this course, students will be introduced to the IPython programming environment. They will learn how to gather data, store it in appropriate data structures and then either write their own functions or use libraries to analyze and then display the salient information in that data. Data will be drawn from a variety of domains, including but not limited to travel, entertainment, politics, economics, biology etc.
For BA Students: Formal Reasoning and Analysis
One-term course offered either term
Activity: Lecture
1 Course Unit

CIS 106 Visualizing the Past.
Most people's information about the Past is drawn from coffee table picture books, popular movies, video games, documentaries about discoveries of "ancient, mysterious, and lost" civilizations, and tours often lead by guides of limited or even dubious credentials. How are these ideas presented, formed, and circulated? Who creates and selects the information presented in this diverse media? Are these presentations accurate? Do they promote or hurt scientific explanations? Can the artistic, aesthetic, and scientific realms be bridged to effectively promote and interpret the past? How can modern technologies be applied to do a better job at presenting what is difficult to experience firsthand? This class will focus on case studies, c and methods of how archaeology and the past are created, presented and used in movies, museums, games, the internet, and art. Each year, the studio-seminar focuses on a project. In addition to exploring general concepts of archaeology and the media, students will work in teams to produce an interactive, digital media exhibit using the latest modeling visualization programs for presenting the sacred landscape of the Inca capital of Cuzco, Peru. Cuzco is one of the most important UNESCO World Heritage sites and visited by nearly a million tourists a year. Potential class projects include fly-throughs of architectural and landscape renderings, simulations of astronomy and cosmology, modeling of human behavior within architectural and landscape settings, and study artifacts in the Penn Museum.
One-term course offered either term
Also Offered As: Anth 258
Activity: Lecture
1 Course Unit

CIS 110 Introduction to Computer Programming
Introduction to Computer Programming is the first course in our series introducing students to computer science. In this class you will learn the fundamentals of computer programming in Java, with emphasis on applications in science and engineering. You will also learn about the broader field of computer science and algorithmic thinking, the fundamental approach that computer scientists take to solving problems.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: See the CIS 110 website for information about registration in recitations and permission to register for closed sections of CIS 110. Counts as a Formal Reasoning course for College students.

CIS 120 Programming Languages and Techniques I
A fast-paced introduction to the fundamental concepts of programming and software design. This course assumes some previous programming experience, at the level of a high school computer science class or CIS 110. (If you got at least 4 in the AP Computer Science A or AB exam, you will do great!) No specific programming language background is assumed: basic experience with any language (for instance Java, C, C++, VB, Python, Perl, or Scheme) is fine. If you have never programmed before, you should take CIS 110 first.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: This counts as a Formal Reasoning course for College students.
CIS 121 Programming Languages and Techniques II
This is a course about Algorithms and Data Structures using the JAVA programming language. We introduce the basic concepts about complexity of an algorithm and methods on how to compute the running time of algorithms. Then, we describe data structures like stacks, queues, maps, trees, and graphs, and we construct efficient algorithms based on these representations. The course builds upon existing implementations of basic data structures in JAVA and extends them for the structures like trees, studying the performance of operations on such structures, and the efficiency when used in real-world applications. A large project introducing students to the challenges of software engineering concludes the course.
Course usually offered in spring term
Prerequisites: CIS 120, CIS 160
Activity: Lecture 1 Course Unit

CIS 125 Technology and Policy
Have you ever wondered why sharing music and video generates such political and legal controversies? Is information on your PC safe and should law enforcement be able to access information you enter on the Web? Will new devices allow tracking of your every move and every purchase? CIS 125 is focused on developing an understanding of existing and emerging technologies, along with the political, societal and economic impacts of those technologies. The technologies are spread across a number of engineering areas and each of them raise issues that are of current concern or are likely to be a future issue.
Activity: Lecture 1 Course Unit

CIS 140 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness.
Course usually offered in fall term
Also Offered As: COGS 301, LING 105, PHIL 044, PSYC 207
Activity: Lecture 1 Course Unit
Notes: This counts as a Formal Reasoning course for College students.

CIS 160 Mathematical Foundations of Computer Science
What are the basic mathematical concepts and techniques needed in computer science? This course provides an introduction to proof principles and logics, functions and relations, induction principles, combinatorics and graph theory, as well as a rigorous grounding in writing and reading mathematical proofs.
Course usually offered in spring term
Activity: Lecture 1 Course Unit

CIS 190 C++ Programming
This course will provide an introduction to programming in C++ and is intended for students who already have some exposure to programming in another language such as Java. C++ provides the programmer with a greater level of control over machine resources and are commonly used in situations where low level access or performance are important. This course will illuminate the issues associated with programming at this level and will cover issues such as explicit memory management, pointers, the compilation process and debugging. The course will involve several programming projects which will provide students with the experience they need to program effectively in these languages. This course assumes programming experience equivalent to CIS 110, CIS 120 or ESE 112.
One term course offered either term
Prerequisite: CIS 240
Activity: Lecture 0.5 Course Units

CIS 191 Using and Understanding Unix and Linux
Unix, in its many forms, runs much of the world’s computer infrastructure, from cable modems and cell phones to the giant clusters that power Google and Amazon. This half-credit course provides a thorough introduction to Unix and Linux. Topics will range from critical basic skills such as exam and editing files, compiling programs and writing shell scripts, to higher level topics such as the architecture of Unix and its programming model. The material learned is applicable to many classes, including CIS 240, CIS 331, CIS 341, CIS 371, and CIS 380.
One term course offered either term
Prerequisite: CIS 110 or equivalent
Activity: Lecture 0.5 Course Units

CIS 192 Python Programming
Python is an elegant, concise, and powerful language that is useful for tasks large and small. Python has quickly become a popular language for getting things done efficiently in many in all domains: scripting, systems programming, research tools, and web development. This course will provide an introduction to this modern high-level language using hands-on experience through programming assignments and a collaborative final application development project.
One term course offered either term
Prerequisite: CIS 110 or ESE 112
Activity: Lecture 0.5 Course Units

CIS 193 C# Programming
C# is the premier programming language for the .NET framework. Over the last decade, the language has evolved to meet the needs of a variety of programming styles while supporting the ever-growing capabilities of the .NET runtime and libraries. This course provides a thorough introduction to the C# language and the .NET framework, building on the skills gained in the introductory programming courses (CIS 110, CIS 120, or ESE 112). In addition to providing the student with a solid background in C#, this course also explores topics that the .NET platform exposes such as object-oriented design, .NET runtime internals, and others based on class interest. A series of short, weekly homework assignments reinforce the concepts introduced in class and a group-based final project of the students’ design allows them to apply their C# knowledge toward a substantial problem.
One term course offered either term
Prerequisite: CIS 110
Activity: Lecture 0.5 Course Units
CIS 194 Haskell
Haskell is a high-level, purely functional programming language with a strong static type system and elegant mathematical underpinnings. It is being increasingly used in industry by organizations such as Facebook, AT&T, and NASA, along with several financial firms. We will explore the joys of function programming, using Haskell as a vehicle. The aim of the course will be to allow you to use Haskell to easily and conveniently write practical programs. All are welcome, including those with no programming experience. Evaluation will be based on regular homework assignments and class participation.
One term course offered either term
Activity: Lecture
0.5 Course Units

CIS 195 Mobile App Development
This project-oriented course is centered around application development on current mobile platforms like iOS and Android. The first half of the course will involve fundamentals of mobile app development, where students learn about mobile app lifecycles, event-based programming, efficient resource management, and how to interact with the range of sensors available on modern mobile devices. In the second half of the course, students work in teams to conceptualize and develop a significant mobile application. Creativity and originality are highly encouraged!
One term course offered either term
Prerequisites: CIS 120 and CIS 240. Students should come with a strong understanding of the fundamentals of programming.
Activity: Lecture
0.5 Course Units

CIS 196 Ruby on Rails Web Development
This course will teach the fundamentals of developing web applications using Ruby on Rails, a rapid-development web framework developed by 37signals. The topics covered will start with Ruby, the language that powers Rails, and include all topics required to develop and deploy production-ready web applications with Rails. During the entire course, students will be working on a project of their own choosing which will develop as they learn additional concepts. Upon completion of the course this application will be deployed and accessible to the public. Students will be encouraged to continue building their applications even after the course given support from the Philadelphia Ruby community.
Activity: Lecture
0.5 Course Units

CIS 197 Javascript
This course provides an introduction to modern web development frameworks, techniques, and practices used to deliver robust client side applications on the web. The emphasis will be on developing JavaScript programs that run in the browser. Topics covered include the JavaScript language, web browser internals, the Document Object Model (DOM), HTML5, client-side app architecture and compile-to-JS languages like (CoffeeScript, TypeScript, etc.). This course is most useful for students who have some programming and web development experience and want to develop moderate JavaScript skills to be able to build complex, interactive applications in the browser.
One term course offered either term
Activity: Lecture
0.5 Course Units

CIS 198 Rust Programming
Rust is a new, practical, community-developed systems programming language that runs blazingly fast, prevents almost all crashes, and eliminates many other language and runtime problems. Rust derives from a rich history of languages to create a multi-paradigm (imperative/functional), low-level language that focuses on high-performance, zero-cost safety guarantee in concurrent programs. It has begun to gain traction in industry even before official 1.0 release in May 2015, showing a recognized need for a new low-level systems language. In this course, we will cover what makes Rust so unique and apply it to practical systems programming problems.
Topics covered will include traits and generics; memory safety (move semantics, borrowing, and lifetimes); Rust’s rich macro system; closures; and concurrency. Evaluation is based on regular homework assignments as well as a final project and class participation.
One term course offered either term
Activity: Lecture
0.5 Course Units

CIS 240 Introduction to Computer Systems
You know how to program, but do you know how computers really work? How do millions of transistors come together to form a complete computing system? This bottom-up course begins with transistors and simple computer hardware structures, continues with low-level programming using primitive machine instructions, and finishes with an introduction to the C programming language. This course is a broad introduction to all aspects of computer systems architecture and serves as the foundation for subsequent computer systems courses, such as Digital Systems Organization and Design (CIS 371), Computer Operating Systems (CIS 380), and Compilers and Interpreters (CIS 341).
Course usually offered in fall term
Prerequisite: CIS 110 or equivalent
Activity: Lecture
1 Course Unit

CIS 261 Discrete Probability, Stochastic Processes, and Statistical Inference
The purpose of this course is to provide a 1 CU educational experience which tightly integrates the theory and applications of discrete probability, discrete stochastic processes, and discrete statistical inference in the study of computer science. The intended audience for this class is both those students who are CS majors as well as those intending to be CS majors. Specifically, it will be assumed that the students will know: Set Theory, Mathematical Induction, Number Theory, Functions, Equivalence Relations, Partial-Order Relations, Combinatorics, and Graph Theory at the level currently covered in CIS 160. This course could be taken immediately following CIS 160. Computation and Programming will play an essential role in this course. The students will be expected to use the Maple programming environment in homework exercises which will include: numerical and symbolic computations, simulations, and graphical displays.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1 Course Unit

University of Pennsylvania
CIS 262 Automata, Computability, and Complexity
This course explores questions fundamental to computer science such as which problems cannot be solved by computers, can we formalize computing as a mathematical concept without relying upon the specifics of programming languages and computing platforms, and which problems can be solved efficiently. The topics include finite automata and regular languages, context-free grammars and pushdown automata, Turing machines and undecidability, tractability and NP-completeness. The course emphasizes rigorous mathematical reasoning as well as connections to practical computing problems such as test processing, parsing, XML query languages, and program verification.
Course usually offered in fall term
Prerequisite: CIS 160
Activity: Lecture
1 Course Unit

CIS 320 Introduction to Algorithms
How do you optimally encode a text file? How do you find shortest paths in a map? How do you design a communication network? How do you route data in a network? What are the limits of efficient computation? This course gives a comprehensive introduction to design and analysis of algorithms, and answers along the way to these and many other interesting computational questions. You will learn about problem-solving; advanced data structures such as universal hashing and red-black trees; advanced design and analysis techniques such as dynamic programming and amortized analysis; graph algorithms such as minimum spanning trees and network flows; NP-completeness theory; and approximation algorithms.
Course usually offered in spring term
Prerequisites: CIS 120, 121, 160, 262
Activity: Lecture
1 Course Unit

CIS 334 Advanced Topics in Algorithms
Can you check if two large documents are identical by examining a small number of bits? Can you verify that a program has correctly computed a function without ever computing the function? Can students compute the average score on an exam without ever revealing their scores to each other? Can you be convinced of the correctness of an assertion without ever seeing the proof? The answer to all these questions is in the affirmative provided we allow the use of randomization. Over the past few decades, randomization has emerged as a powerful resource in algorithm design. This course would focus on powerful general techniques for designing randomized algorithms as well as specific representative applications in various domains, including approximation algorithms, cryptography and number theory, data structure design, online algorithms, and parallel and distributed computation.
Course not offered every year
Prerequisite: CIS 320
Activity: Lecture
1 Course Unit

CIS 341 Compilers and Interpreters
You know how to program, but do you know how to implement a programming language? In CIS341 you'll learn how to build a compiler. Topics covered include: lexical analysis, grammars and parsing, intermediate representations, syntax-directed translation, code generation, type checking, simple dataflow and control-flow analyses, and optimizations. Along the way, we study objects and inheritance, first-class functions (closures), data representation and runtime support issues such as garbage collection. This is a challenging, implementation-oriented course in which students build a full compiler from a simple, typed object-oriented language to fully operational x86 assembly. The course projects are implemented using OCaml, but no knowledge of OCaml is assumed.
Course not offered every year
Prerequisites: Two semesters of programming courses, e.g., CIS 120, CIS 121, and CIS 240
Activity: Lecture
1 Course Unit

CIS 350 Software Design/Engineering
You know how to write a "program". But how do you create a software "product" as part of a team, with customers that have expectations of functionality and quality? This course introduces students to various tools (source control, automated build systems, programming environments, test automation, etc.) and processes (design, implementation, testing, and maintenance) that are used by professionals in the field of software engineering. Topics will include: software development lifecycle; agile and test-driven development; source control and continuous integration; requirements analysis; object-oriented design and testability; mobile and/or web application development; software testing; refactoring; and software quality metrics.
Course not offered every year
Prerequisite: CIS 121
Activity: Lecture
1 Course Unit

CIS 371 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly machines, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization.
Course usually offered in spring term
Prerequisite: CIS 240
Activity: Lecture
1 Course Unit
CIS 380 Computer Operating Systems
This course surveys methods and algorithms used in modern operating systems. Concurrent distributed operation is emphasized. The main topics covered are as follows: process synchronization; interprocess communication; concurrent/distributed programming languages; resource allocation and deadlock; virtual memory; protection and security; distributed operation; distributed data; performance evaluation. Course usually offered in fall term
Prerequisite: CIS 240
Activity: Lecture
1 Course Unit

CIS 390 Robotics: Planning Perception
This introductory course will present basic principles of robotics with an emphasis to computer science aspects. Algorithms for planning and perception will be studied and implemented on actual robots. While planning is a fundamental problem in artificial intelligence and decision making, robot planning refers to finding a path from A to B in the presence of obstacles and by complying with the kinematic constraints of the robot. Perception involves the estimation of the robots motion and path as well as the shape of the environment from sensors. In this course, algorithms will be implemented in Python on mobile platforms on ground and in the air. No prior experience with Python is needed but we require knowledge of data structures, linear algebra, and basic probability. Course not offered every year
Prerequisites: CIS 121 and MATH 240 or equivalent
Activity: Lecture
1 Course Unit

CIS 398 Quantum Computer and Information Science
The purpose of this course is to introduce undergraduate students in computer science and engineering to quantum computers (QC) and quantum information science (QIS). This course is meant primarily for juniors and seniors in Computer Science. No prior knowledge of quantum mechanics (QM) is assumed. Enrollment is by permission of the instructor.
One-term course offered either term
Prerequisites: PHYS 151, MATH 240, MATH 312, MATH 314, CIS 160 and CIS 262
Activity: Lecture
1 Course Unit

CIS 400 Senior Project
Design and implementation of a significant piece of work: software, hardware or theory. In addition, emphasis on technical writing and oral communication skills. Students must have an abstract of their Senior Project, which is approved and signed by a Project Adviser, at the end of the second week of Fall classes. The project continues during two semesters; students must enroll in CIS 401 during the second semester. At the end of the first semester, students are required to submit an intermediate report and give a class presentation describing their project and progress. Grades are based on technical writing skills (as per submitted report), oral presentation skills (as per class presentation) and progress on the project. These are evaluated by the Project Adviser and the Course Instructor.
Course usually offered in fall term
Prerequisite: Senior standing or permission of instructor
Activity: Lecture
1 Course Unit

CIS 401 Senior Project
Continuation of CIS 400. Design and implementation of a significant piece of work: software, hardware or theory. Students are required to submit a final written report and give a final presentation and demonstration of their project. Grades are based on the report, the presentation and the satisfactory completion of the project. These are evaluated by the Project Adviser and the Course Instructor.
Course usually offered in spring term
Prerequisites: CIS 400, senior standing or permission of instructor
Activity: Lecture
1 Course Unit

CIS 419 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis. One-term course offered either term
Also Offered As: CIS 519
Prerequisite: CIS 121 or an equivalent course in data structures
Activity: Lecture
1 Course Unit

CIS 421 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
Also Offered As: CIS 521
Prerequisites: CIS 121, ESE 301 or STAT 430 recommended
Activity: Lecture
1 Course Unit

CIS 435 Intro Comp Bio&Bio Model
One-term course offered either term
Also Offered As: BIOL 437
Activity: Lecture
1 Course Unit
CIS 441 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One-term course offered either term
Also Offered As: CIS 541
Activity: Lecture
1 Course Unit

CIS 450 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development; and "big data" and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS160 and CIS121.
Course usually offered in fall term
Also Offered As: CIS 550
Prerequisites: CIS 121, 160
Activity: Lecture
1 Course Unit

CIS 455 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how "cloud computing" services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow's Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester's project will be a peer-to-peer implementation of a Google-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs.
One-term course offered either term
Also Offered As: CIS 555
Prerequisites: Familiarity with threads and concurrency, strong Java programming skills.
Activity: Lecture
1 Course Unit

CIS 460 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Course usually offered in fall term
Also Offered As: CIS 560
Prerequisites: CIS 120, CIS 121 and CIS 240 are useful pre- or co-requisites
Activity: Lecture
1 Course Unit

CIS 461 Advanced Computer Graphics
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping.
One-term course offered either term
Also Offered As: CIS 561
Prerequisites: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
Activity: Lecture
1 Course Unit
CIS 462 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer game virtual reality simulations and high-end animation applications. The course balances theory with practice by “looking under the hood” of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents.
One-term course offered either term
Also Offered As: CIS 562
Prerequisites: Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
Activity: Lecture
1 Course Unit

CIS 482 Logic In Computer Science
Logic has been called the calculus of computer science as it plays a fundamental role in computer science, similar to that played by calculus in the physical sciences and traditional engineering disciplines. Indeed, logic is useful in areas of computer science as disparate as architecture (logic gates), software engineering (specification and verification), programming languages (semantics, logic programming), databases (relational algebra and SQL), artificial intelligence (automatic theorem proving), algorithms (complexity and expressiveness), and theory of computation (general notions of computability). CIS 482 provides the students with a thorough introduction to mathematical logic, covering in depth the topics of syntax, semantics, decision procedures, formal proof systems, and soundness and completeness for both propositional and first-order logic. The material is taught from computer science perspective, with an emphasis on algorithms, computational complexity, and tools. Projects will focus on problems in circuit design, specification and analysis and protocols, and query evaluation in databases.
One-term course offered either term
Prerequisite: CIS 160
Activity: Lecture
1 Course Unit

CIS 497 DMD Senior Project
The goal of this course is to provide an opportunity for seniors to define, design and execute a project of their own choosing that demonstrates the technical skill and abilities that you have acquired during your 4 years as undergraduates. Evaluation is based on selecting an interesting topic, completing appropriate research on the state of the art in that area, communicating your objectives in writing and in presentations, accurately estimating what resources will be required to complete your chosen task, coding necessary functionality, and executing your plan.
One-term course offered either term
Prerequisite: Senior Standing or Permission of the Instructor
Activity: Lecture
1 Course Unit

CIS 500 Software Foundations
This course introduces basic concepts and techniques in the foundational study of programming languages. The central theme is the view of programs and programming languages as mathematical objects for which precise claims may be made and proved. Particular topics include operational techniques for formal definition of language features, type systems and type safety properties, polymorphism, constructive logic, and the Coq proof assistant. This course is appropriate as an upper-level undergraduate CIS elective. Undergraduates who have satisfied the prerequisites are welcome to enroll. No permission from the instructor is needed.
One-term course offered either term
Prerequisites: CIS 121, 160, and CIS 262 (or equivalents); plus substantial mathematical maturity (at least two additional undergraduate courses in math or theoretical CS). Undergraduate-level coursework in programming languages, compilers, functional programming, or logic is helpful but not required.
Activity: Lecture
1 Course Unit

CIS 501 Computer Architecture
This course is an introductory graduate course on computer architecture with an emphasis on a quantitative approach to cost/performance design tradeoffs. The course covers the fundamentals of classical and modern uniprocessor design: performance and cost issues, instruction sets, pipelining, superscalar, out-of-order, and speculative execution mechanisms, caches, physical memory, virtual memory, and I/O. Other topics include: static scheduling, VLIW and EPIC, software speculation, long (SIMD) and short (multimedia) vector execution, multithreading, and an introduction to shared memory multiprocessors.
One-term course offered either term
Prerequisites: Knowledge of computer organization and basic programming skills
Activity: Lecture
1 Course Unit

CIS 502 Analysis of Algorithms
An investigation of paradigms for design and analysis of algorithms.
The course will include dynamic programming, flows and combinatorial optimization algorithms, linear programming, randomization and a brief introduction to intractability and approximation algorithms. The course will include other advanced topics, time permitting.
One-term course offered either term
Prerequisites: Data Structures and Algorithms at the undergraduate level. Programming experience (CIT 594 or equivalent) is helpful but not necessary.
Activity: Lecture
1 Course Unit

CIS 505 Software Systems
This course provides an introduction to fundamental concepts of distributed systems, and the design principles for building large scale computational systems. Topics covered include communication, concurrency, programming paradigms, naming, managing shared state, caching, synchronization, reaching agreement, fault tolerance, security, middleware, and distributed applications. This course is appropriate as an upper-level undergraduate CIS elective.
One-term course offered either term
Prerequisites: Undergraduate-level knowledge of Operating Systems and Networking programming experience (CIT 594 or equivalent)
Activity: Lecture
1 Course Unit
CIS 511 Theory of Computation
Review of regular and context-free languages and machine models. Turing machines and RAM models, Decidability, Halting problem, Reductions, Recursively enumerable sets, Universal TMs, Church/Turing thesis. Time and space complexity, hierarchy theorems, the complexity classes P, NP, PSPACE, L, NL, and co-NL. Reductions revisited, Cook-Levin Theorem, completeness, NL = co-NL. Advanced topics as time permits: Circuit complexity and parallel computation, randomized complexity, approximability, interaction and cryptography.
One term course offered either term
Prerequisites: Discrete Mathematics, Automata theory or Algorithms at the undergraduate level.
Activity: Lecture
1 Course Unit

CIS 515 Fundamentals of Linear Algebra and Optimization
This course provides firm foundations in linear algebra and basic optimization techniques. Emphasis is placed on teaching methods and tools that are widely used in various areas of computer science. Both theoretical and algorithmic aspects will be discussed.
One term course offered either term
Prerequisites: Undergraduate course in linear algebra, calculus
Activity: Lecture
1 Course Unit

CIS 518 Topics in Logic: Finite Model Theory and Descriptive Complexity
This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some of the fundamental theorems about the behavior of first-order logic in the context of finite structures, in particular, the Ehrenfeucht-Fraisse Theorem and the Trakhtenbrot Theorem. The first of these results is used to show limitations on the expressive power of first-order logic over finite structures while the second result demonstrates that the problem of reasoning about finite structures using first-order logic is surprisingly complex. The course then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages. The expressive power of these extensions will be studied in detail and will be connected to various problems in the theory of computational complexity. This last motif, namely the relation between descriptive and computational complexity, will be one of the main themes of the course.
One term course offered either term
Also Offered As: MATH 571, PHIL 412
Activity: Seminar
1 Course Unit

CIS 519 Introduction to Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis.
One term course offered either term
Also Offered As: CIS 419
Prerequisite: CIS 121 or an equivalent course in data structures
Activity: Lecture
1 Course Unit

CIS 520 Machine Learning
This course covers the foundations of statistical machine learning. The focus is on probabilistic and statistical methods for prediction and clustering in high dimensions. Topics covered include linear and logistic regression, SVMs, PCA and dimensionality reduction, EM and HMMs, and deep learning.
Course usually offered in fall term
Prerequisites: Elementary probability, calculus, and linear algebra. Basic programming experience.
Activity: Lecture
1 Course Unit

CIS 521 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
One term course offered either term
Also Offered As: CIS 421
Prerequisites: CIS 121, ESE 301 or STAT 430 recommended
Activity: Lecture
1 Course Unit

CIS 526 Machine Translation
Google translate can instantly translate between any pair of over fifty human languages (for instance, from French to English). How does it do that? Why does it make the errors that it does? And how can you build something better? Modern translation systems like Google Translate and Bing Translator learn how to translate by reading millions of words of already translated text, and this course will show you how they work. The course covers a diverse set of fundamental building blocks from linguistics, machine learning, algorithms, data structures, and formal language theory, along with their application to a real and difficult problem in artificial intelligence.
One term course offered either term
Activity: Lecture
1 Course Unit
CIS 530 Computational Linguistics
Computational approaches to the problem of understanding and producing natural language text and speech, including speech processing, syntactic parsing, semantic interpretation, discourse meaning and the role of pragmatics and world knowledge. The course will examine both rule-based and corpus-based techniques. It is recommended that students have some knowledge of logic, basic linguistics, and/or programming.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CIS 535 Introduction to Bioinformatics
This course covers methods used in computational biology, including the statistical models and algorithms used and the biological problems which they address. Students will learn how tools such as BLAST work, and will use them to address real problems. The course will focus on sequence analysis problems such as exon, motif and gene finding, and on comparative methods but will also cover gene expression and proteomics.
Course usually offered in fall term
Also Offered As: OCB 535
Prerequisites: The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as BIOL 527 (Advanced Molecular Biology and Genetics), BIOL 540 (Genetic Systems, or equivalent, is a prerequisite.
Activity: Lecture
1 Course Unit

CIS 537 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods.
One term course offered either term
Also Offered As: BE 537
Prerequisites: Mathematics through multivariate calculus (MATH 241), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
Activity: Lecture
1 Course Unit

CIS 540 Principles of Embedded Computation
This course is focused on principles underlying design and analysis of computational elements that interact with the physical environment. Increasingly, such embedded computers are everywhere, from smart cameras to medical devices to automobiles. While the classical theory of computation focuses on the function that a program computes, to understand embedded computation, we need to focus on the reactive nature of the interaction of a component with its environment via inputs and outputs, the continuous dynamics of the physical world, different ways of communication among components, and requirements concerning safety, timeliness, stability, and performance. Developing tools for approaching design, analysis, and implementation of embedded systems in a principled manner is an active research area. This course will attempt to give students a coherent introduction to this emerging area. This course is appropriate as an upper-level undergraduate CIS elective.
Course usually offered in fall term
Prerequisites: This course assumes mathematical maturity, commensurate with either ESE 210 (Introduction to Dynamical Systems), or CIS 262 (Introduction to Theory of Computation). It is suitable for students who have an undergraduate degree in computer science, or computer engineering, or electrical engineering. It is also suitable for Penn undergraduates in CIS or CE as an upper-level elective.
Activity: Lecture
1 Course Unit

CIS 541 Embedded Software for Life-Critical Applications
The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).
One term course offered either term
Also Offered As: CIS 441
Activity: Lecture
1 Course Unit

CIS 542 Embedded Systems Programming
This course explores techniques for writing correct and efficient embedded code. Topics include C/C++ idioms, data abstraction, elementary data structures and algorithms, environment modeling, concurrency, hard real time, and modular program reasoning.
One term course offered either term
Prerequisite: C fluency
Activity: Lecture
1 Course Unit

CIS 545 Big Data Analytics
Course usually offered in spring term
Activity: Lecture
1 Course Unit
CIS 548 Operating Systems Design and Implementation
The purpose of this masters-level course is to teach the design and implementation of operating systems and operating systems concepts that appear in other advanced systems. The course divides into three major sections. The first part of the course discusses concurrency: how to manage multiple tasks that execute at the same time and share resources. Topics in this section include processes and threads, context switching, synchronization, scheduling, and deadlock. The second part of the course addresses the problem of memory management; it will cover topics such as linking, dynamic memory allocation, dynamic memory translation, virtual memory, and demand paging. The third major part of the course concerns file systems, including topics such as storage devices, disk management and scheduling, directories, protection, and crash recovery. After these three major topics, the class will conclude with specialized topics such as virtual machines and case studies of different operating systems (e.g. Android, Windows, Linux, etc.).

One-term course offered either term
Prerequisite: Proficient knowledge of C/C++
Activity: Lecture
1 Course Unit

Notes: This is considered a faster-paced version of the CIS 380 taken by Penn undergraduates due to topic overlaps. Undergraduates who have taken CIS 380 will not get credit taking this course. Undergraduates who have taken CIS 380 should directly proctored take CIS 505 if they are submatriculating.

CIS 549 Wireless Mobile Communication
This course covers generations of wireless mobile network standards and systems, basic differences and their evolution, charting the development of mobile telecommunications systems from 3G, to today's state-of-the-art wireless technology 4G LTE, and the next generation wireless technology, 5G.

One-term course offered either term
Prerequisites: ESE 407 or CIS 505, 551 or 553 or permission of the instructor
Activity: Lecture
1 Course Unit

CIS 550 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design, the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web database development; and "big data" and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS 160 and CIS 121.
Course usually offered in fall term
Also Offered As: CIS 450
Prerequisites: CIS 121, 160
Activity: Lecture
1 Course Unit

CIS 551 Computer and Network Security
This is an introduction to topics in the security of computer systems and communication on networks of computers. The course covers four major areas: fundamentals of cryptography, security for communication protocols, security for operating systems and mobile programs, and security for electronic commerce. Sample specific topics include: passwords and offline attacks, DES, RSA, DSA, SHA, SSL, CBC, IPSec, SET, DDoS attacks, biometric authentication, PKI, smart cards, S/MIME, privacy on the Web, viruses, security models, wireless security, and sandboxing. Students will be expected to display knowledge of both theory and practice through written examinations and programming assignments.
Course usually offered in spring term
Prerequisites: CIS 553 or equivalent is required; CIS 500 recommended.
Activity: Lecture
1 Course Unit

CIS 552 Advanced Programming
The goals of this course are twofold: (1) to take good programmers and turn them into excellent ones, and (2) to introduce them to a range of modern software engineering practices, in particular those embodied in advanced functional programming languages.

One-term course offered either term
Prerequisites: Four courses involving significant programming and a discrete mathematics or modern algebra course. Enrollment by permission of the instructor only.
Activity: Lecture
1 Course Unit

CIS 553 Networked Systems
This course provides an introduction to fundamental concepts in the design and implementation of networked systems, their protocols, and applications. Topics to be covered include: Internet architecture, network applications, addressing, routing, transport protocols, network security, and peer-to-peer networks. The course will involve written assignments, examinations, and programming assignments. Students will work in teams to design and implement networked systems in layers, from routing protocols, transport protocols, to peer-to-peer networks.

One-term course offered either term
Prerequisites: CIS 121 or equivalent, or permission of the instructor
Activity: Lecture
1 Course Unit

CIS 554 Programming Paradigms
Achieving mastery in a new programming language requires more than just learning a new syntax; rather, different languages support different ways to think about solving problems. Not all programming languages are inherently procedural or object-oriented. The intent of this course is to provide a basic understanding of a wide variety of programming paradigms, such as logic programming, functional programming, concurrent programming, rule-based programming, and others.

One-term course offered either term
Prerequisite: CIS 121 or CIT 594 or equivalent
Activity: Lecture
1 Course Unit
CIS 555 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how “cloud computing” services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow’s Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester’s project will be a peer-to-peer implementation of a Google-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs, thinking about modularity, reading other people’s code, managing versions, debugging, etc.
One-term course offered either term
Also Offered As: CIS 455
Prerequisites: Familiarity with threads and concurrency, strong Java programming skills.
Activity: Lecture
1 Course Unit

CIS 556 Cryptography
This course is a graduate-level introduction to cryptography, both theory and applications. Topics covered include symmetric cryptography, message authentication, public-key cryptography, digital signatures, cryptanalysis, cryptographic security, and secure channels, as well as a selection of more advanced topics such as zero-knowledge proofs, secure multiparty computation, privacy-enhancing technologies, or lattice-based cryptography.
One-term course offered either term
Prerequisites: CIS 262, 320 or equivalent
Activity: Lecture
1 Course Unit

CIS 557 Programming for the Web
This course will focus on web programming. The first half will focus on the basics of the internet and the Web, HTML and CSS, and basic and advanced Ruby. The second half will focus on Rails. Teams (of size 2-3) will build a web application in the second half of the semester as the class project. Through Rails, we’ll explore the “culture” of web programming such as agile methodology, testing, key aspects of software engineering, using web services and APIs, and deploying to the cloud.
Prerequisites: CIS 121, CIT 594, or equivalent, or permission of the instructor
Activity: Lecture
1 Course Unit

CIS 558 Computer Analysis and Modeling of Biological Signals and Systems
A graduate course intended to introduce the use of signal and image processing tools for analyzing and modeling biological systems. We present a series of fundamental examples drawn from areas of speech analysis/synthesis, computer vision, and modeling of biological perceptual systems. Students learn the material through lectures and via a set of computer exercises developed in MATLAB.
Course usually offered in spring term
Also Offered As: LING 525
Prerequisite: Undergraduate-level knowledge of linear algebra
Activity: Lecture
1 Course Unit

CIS 559 Programming and Problem Solving
This course develops students problem solving skills using techniques that they have learned during their CS training. Over the course of the semester, students work on group projects in which they use programming techniques to solve open-ended problems, e.g. optimization, simulation, etc. There are no “correct” answers to these problems; rather, the focus is on the four steps of the problem solving process: algorithmic thinking; programming; analysis; and communication.
One-term course offered either term
Prerequisites: Proficiency in Java. CIS 320 or CIS 502, or equivalent
Activity: Lecture
1 Course Unit

CIS 560 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry, C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Course usually offered in fall term
Also Offered As: CIS 460
Prerequisites: CIS 120 (CIS 120 and CIS 240 are useful pre- or co-requisites)
Activity: Lecture
1 Course Unit

CIS 561 Advanced Computer Graphics
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping.
One-term course offered either term
Also Offered As: CIS 461
Prerequisites: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
Activity: Lecture
1 Course Unit

CIS 562 Advanced Computer Graphics
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping.
One-term course offered either term
Also Offered As: CIS 461
Prerequisites: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
Activity: Lecture
1 Course Unit
CIS 552 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer games, virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kine invkemetics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents.
One-term course offered either term
Also Offered As: CIS 462
Prerequisites: Previous exposure to major concepts in linear algebra (i.e. vector matrix math) or curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
Activity. Lecture 1 Course Unit

CIS 553 Physically Based Animation
This course introduces students to common physically based simulation techniques for animation of fluids and gases, rigid and deformable solids, cloth, explosions, fire, smoke, virtual characters, and other systems. Physically based simulation techniques allow for creation of extremely realistic special effects for movies, video games and surgical simulation systems. We will learn state-of-the-art techniques that are commonly used in current special effects and animation studios and in video games community. To gain hands-on experience, students will implement basic simulators for several systems. The topics will include: Particle Systems, Mass spring systems, Deformable Solids & Fracture, Cloth, Explosions & Fire, Smoke, Fluids, Deformable active characters, Simulation and control of rigid bodies, Rigid body dynamics, Collision detection and handling, Simulation of articulated characters, Simulated characters in games. The course is appropriate for both upper level undergraduate and graduate students.
One-term course offered either term
Prerequisites: Students should have a good knowledge of object-oriented programming (C++) and basic familiarity with linear algebra and physics. Background in computer graphics is required (CIS 461 or CIS 561).
Activity. Lecture 1 Course Unit

CIS 554 Game Design and Development
The intent of the course is to provide students with a solid theoretical understanding of the core creative principles, concepts, and game play structures/schemas underlying most game designs. The course also examines game development from an engineering point of view, including: game mechanics, game engine software and hardware architectures, user interfaces, design documents, playtesting and production methods.
One-term course offered either term
Prerequisites: Basic understanding of 3D graphics and animation principles, prior exposure to scripting and programming languages such as Python, C and C++
Activity. Lecture 1 Course Unit

CIS 555 GPU Programming and Architecture
This course examines the architecture and capabilities of modern GPUs. The graphics processing unit (GPU) has grown in power over recent years, to the point where many computations can be performed faster on the GPU than on a traditional CPU. GPUs have also become programmable, allowing them to be used for a diverse set of applications far removed from traditional graphics settings. Topics covered include architectural aspects of modern GPUs, with a special focus on their streaming parallel nature, writing programs on the GPU using high level languages like Cg and BrookGPU, and using the GPU for graphics and general purpose applications in the area of geometry modeling, physical simulation, scientific computing and games. Students are expected to have a basic understanding of computer architecture and graphics, and should be proficient in OpenGL and C/C++.
This course is appropriate as an upper-level undergraduate CIS elective.
One-term course offered either term
Prerequisites: CIS 460 or CIS 560, and familiarity with computer hardware/systems. The hardware/systems requirement may be met by CIS 501; or CIT 593 and 595; or CIS 240 (with CIS 371 recommended); or equivalent coursework.
Activity. Lecture 1 Course Unit

CIS 556 Procedural Computer Graphics
Sprawling cities, dense vegetation, infinite worlds - procedural graphics empower technical artists to quickly create complex digital assets that would otherwise be unfeasible. This course is intended to introduce the mathematical and algorithmic foundations of procedural modeling and animation techniques, and to offer hands-on experience designing and implementing visual recipes in original graphics projects by applying these methods. Students should have a strong interest in both the creative and technical aspects of computer graphics, as well as a solid programming background.
One-term course offered either term
Prerequisite: CIS 460 or CIS 560
Activity. Lecture 1 Course Unit
CIS 568 Game Design Practicum
The objective of the game design practicum is to provide students with hands on experience designing and developing 3D computer games. Working in teams of three or four, students will brainstorm an original game concept, write a formal game design document then develop a fully functional prototype consisting of a playable level of the game. In addition to creation of original art and animation assets for the game, technical features to be designed and implemented include a novel game mechanic and/or user interaction model, game physics (i.e. particle systems and rigid body dynamics), character animation, game AI (i.e. movement control, path planning, decision making, etc.), sound effects and and background music, 3D graphical user interface (GUI) design and optional multiplayer networking capabilities. Consistent with standard industry practices, game code and logic will be written using C++ and popular scripting languages such as Python and Lua. State-of-the-art game and physics engine middleware also will be used to expose students to commercial-grade software, production methodologies and art asset pipelines. As a result of their game development efforts, students will learn first hand about the creative process, design documentation, object-oriented software design and engineering, project management (including effective team collaboration and communication techniques), design iteration through user feedback and play-testing, and most importantly, what makes a game fun to play.

One-term course offered either term
Prerequisites: CIS 462/CIS 562, 562, CIS 461/CIS 561, or CIS 460/CIS 560
Corequisite: CIS 564
Activity: Lecture
1 Course Unit

CIS 573 Software Engineering
Writing a "program" is easy. Developing a "software product", however, introduces numerous challenges that make it a much more difficult task. This course will look at how professional software engineers address those challenges, by investigating best practices from industry and emerging trends in software engineering research. Topics will focus on software maintenance issues, including: test case generation and test suite adequacy; code analysis verification and model checking; debugging and fault localization; refactoring and regression testing; and software design and quality.

Course usually offered in fall term
Prerequisites: CIT 594 or CIS 350, or equivalent; proficiency in Java
Activity: Lecture
1 Course Unit

CIS 580 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective. Course usually offered in fall term
Prerequisites: A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Activity: Lecture
1 Course Unit

CIS 581 Computer Vision & Computational Photography
This is an introductory course to Computer Vision and Computational Photography. This course will explore three topics: 1) image morphing, 2) image matching and stitching, and 3) image recognition. This course is intended to provide a hands-on experience with interesting things to do on images/videos. The world is becoming image-centric. Cameras are now found everywhere, in our cell phones, automobiles, even in medical surgery tools. Computer vision technology has led to latest innovations in areas such as Hollywood movie production, medical diagnosis, biometrics, and digital library. This course is suited for students from all engineering backgrounds, who have the basic knowledge of linear algebra and programming, and a lot of imagination.
Course not offered every year
Activity: Lecture
1 Course Unit

CIS 597 Master's Thesis Research
For students working on an advanced research leading to the completion of a Master's thesis.
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

CIS 599 Independent Study for Masters Students
For master's students studying a specific advanced subject area in computer and information science. Involves coursework and class presentations. A CIS 599 course unit will invariably include formally gradable work comparable to that in a CIS 500-level course. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc.
One-term course offered either term
Activity: Independent Study
1 Course Unit
CIS 601 Advanced Topics in Computer Architecture
This course will focus on research topics in computer architecture, and include reading and presenting research papers and an optional project. The content will differ with each offering, covering topics such as multcore programmability, datacenter and warehouse-scale computing, security, energy-efficient architectures, etc.
One term course offered either term
Prerequisite: CIS 501 or strong performance in CIS 371
Activity: Lecture
1 Course Unit

CIS 610 Advanced Geometric Methods in Computer Science
The purpose of this course is to present some of the advanced geometric methods used in geometric modeling, computer graphics, computer vision, etc. The topics may vary from year to year, and will be selected among the following subjects (nonexhaustive list): Introduction to projective geometry with applications to rational curves and surfaces, control points for rational curves, rectangular and triangular rational patches, drawing closed rational curves and surfaces; Differential geometry of curves (curvature, torsion, osculating planes, the Frenet frame, osculating circles, osculating spheres); Differential geometry of surfaces (first fundamental form, normal curvature, second fundamental form, geodesic curvature, Christoffel symbols, principal curvatures, Gaussian curvature, mean curvature, the Gauss map and its derivative dN, the Dupin indicatrix, the Theorema Egregium equations of Codazzi-Mainardi, Bonnet's theorem, lines of curvatures, geodesic torsion, asymptotic lines, geodesic lines, local Gauss-Bonnet theorem).
Course usually offered in spring term
Prerequisite: CIS 510 or coverage of equivalent material
Activity: Lecture
1 Course Unit

CIS 613 Nonlinear Control Theory
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility and observability, for nonlinear systems; Forbenius' theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations.
Course not offered every year
Also Offered As: ESE 617, MEAM 613
Prerequisites: A sufficient background to linear algebra (ENM 510,511 or equivalent) and a course in linear control theory (MEAM 513 or equivalent), or written permission of the instructor.
Activity: Lecture
1 Course Unit

CIS 620 Advanced Topics in Machine Learning
This course covers a variety of advanced topics in machine learning, such as the following: statistical learning theory (statistical consistency properties of surrogate loss minimizing algorithms); approximate inference in probabilistic graphical models (variational inference methods and sampling-based inference methods); structured prediction (algorithms and theory for supervised learning problems involving complex/structured labels); and online learning in complex/structured domains. The precise topics covered may vary from year to year based on student interest and developments in the field.
Course usually offered in spring term
Prerequisite: CIS 520 or equivalent
Activity: Seminar
1 Course Unit

CIS 625 Computational Learning Theory
This course is an introduction to Computational Learning Theory, a field which attempts to provide algorithmic, complexity-theoretic and statistical foundations to modern machine learning. The focus is on topics in computational learning theory for researchers and students in artificial intelligence, neural networks, theoretical computer science, and statistics.
One term course offered either term
Prerequisites: Prior courses in algorithms, complexity and statistics would be helpful but are not necessary.
Activity: Seminar
1 Course Unit

CIS 630 Advanced Topics in Natural Language Processing
Different topics selected each offering, e.g., NL generation, question-answering, information extraction, machine translation, restricted grammar formalisms, computational lexical semantics, etc.
One term course offered either term
Prerequisite: CIS 530 or equivalent or permission of instructor
Activity: Seminar
1 Course Unit

CIS 640 Advanced Topics in Software Systems
Different topics selected for each course offering.
Course usually offered in spring term
Prerequisite: CIS 505 or equivalent
Activity: Seminar
1 Course Unit

CIS 650 Advanced Topics in Databases
Advanced topics in databases: distributed databases, integrity constraints, failure, concurrency control, relevant relational theory, semantics of data models, the interface between programming of languages and databases. Object-oriented databases. New topics are discussed each year.
Course usually offered in spring term
Prerequisite: CIS 550
Activity: Seminar
1 Course Unit

CIS 660 Advanced Topics in Computer Graphics and Animation
The goal of the course is to review state-of-the-art research in the fields of computer graphics and animation as well as provide students with working knowledge of how to convert theory to practice by developing an associated graphics/animation authoring tool. The course is comprised of primers, lectures, student presentations and the authoring tool group project. Each student will be responsible for presenting one primer and at least two SIGGRAPH papers to the class. Working in teams of two, students will design and develop an authoring tool that that facilitates the creation of a new type of user interaction, animation/simulation capability or 3D graphics special effect. Research papers published in the SigGraph Conference proceedings will provide the basis for the features/functionality/special effects that can be selected for implementation in the authoring tool. Each group will analyze the need and user requirements for the tool they plan to develop, prepare a formal software design document, construct a project work plan, develop the authoring tool functionality and user interface, test the design and demonstrate the authoring of associated content. A plug-in to standard authoring tools such as Maya or Houdini must also be developed to enable importing of appropriate assets and/or exporting of results.
Course usually offered in spring term
Prerequisite: CIS 560 or permission of the instructor
Activity: Seminar
1 Course Unit
CIS 670 Advanced Topics in Programming Languages
The details of this course change from year to year, but its purpose is to cover theoretical topics related to programming languages. Some central topics include: denotational vs operational semantics, domain theory and category theory, the lambda calculus, type theory (including recursive types, generics, type inference and modules), logics of programs and associated completeness and decidability problems, specification languages, and models of concurrency. The course requires a degree of mathematical sophistication.
One term course offered either term
Prerequisite: CIS 500
Activity: Seminar
1 Course Unit

CIS 673 Computer-Aided Verification
This course introduces the theory and practice of formal methods for the design and analysis of concurrent and embedded systems. The emphasis is on the underlying logical and automata-theoretic concepts, the algorithmic solutions, and heuristics to cope with the high computational complexity. Topics: Models and semantics of reactive systems; Verification algorithms; Verification techniques. Topics may vary depending on instructor.
One term course offered either term
Prerequisites: Basic knowledge of algorithms, data structures, automata theory, propositional logic, operating systems, communication protocols, and hardware (CIS 262, CIS 380, or permission of the instructor).
Activity: Lecture
1 Course Unit

CIS 677 Advanced Topics in Algorithms and Complexity
This course covers various aspects of discrete algorithms. Graph-theoretic algorithms in computational biology, and randomization and computation; literature in dynamic graph algorithms, approximation algorithms, and other areas according to student interests.
Course usually offered in fall term
Prerequisite: Consent of the instructor
Activity: Lecture
1 Course Unit

CIS 680 Advanced Topics in Machine Perception
Graduate seminar in advanced work on machine perception as it applies to robots as well as to the modeling of human perception. Topics vary with each offering.
Course usually offered in spring term
Prerequisites: A previous course in machine perception or knowledge of image processing, experience with an operating system and language such as Unix and C, and aptitude for mathematics.
Activity: Seminar
1 Course Unit

CIS 682 Friendly Logics
The use of logical formalisms in Computer Science is dominated by a fundamental conflict: expressiveness vs. algorithmic tractability. Database constraint logics, temporal logics and description logics are successful compromises in this conflict: (1) they are expressive enough for practical specifications in certain areas, and (2) there exist interesting algorithms for the automated use of these specifications. Interesting connections can be made between these logics because temporal and description logics are modal logics, which in turn can be seen, as can database constraint logics, as certain fragments of first-order logic. These connections might benefit research in databases, computer-aided verification and AI. Discussion includes other interesting connections, eg., with SLD-resolution, with constraint satisfaction problems, with finite model theory and with automata theory.
One term course offered either term
Activity: Lecture
1 Course Unit

CIS 700 Special Topics
One time course offerings of special interest. Equivalent to a CIS 5XX level course.
Course not offered every year
Activity: Lecture
1 Course Unit

CIS 800 PhD Special Topics
One time course offerings of special interest. Equivalent to CIS seminar course. Offerings to be determined.
One term course offered either term
Activity: Lecture
1 Course Unit

CIS 895 Teaching Practicum
Enrollment for students participating in Teaching Practicum.
One term course offered either term
Activity: Lecture
1 Course Unit

CIS 899 Doctoral Independent Study
For doctoral students studying a specific advanced subject area in computer and information science. The Independent Study may involve coursework, presentations, and formally gradable work comparable to that in a CIS 500 or 600 level course. The Independent Study may also be used by doctoral students to explore research options with faculty, prior to determining a thesis topic. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc. The Independent Study should not be used for ongoing research towards a thesis, for which the CIS 999 designation should be used.
One term course offered either term
Activity: Independent Study
1 Course Unit

CIS 990 Masters Thesis
For master's students who have taken ten course units and need only to complete the writing of a thesis or finish work for incompletes in order to graduate. CIS 990 carries full time status with zero course units and may be taken only once.
Activity: Masters Thesis
1 Course Unit
CIS 995 Dissertation
For Ph.D. candidates working exclusively on their dissertation research, having completed enrollment for a total of ten semesters (fall and spring). There is no credit or grade for CIS 995.
Activity: Dissertation
1 Course Unit

CIS 996 Research Seminar
Introduction to research being conducted in the department. Mandatory for first-year doctoral students. Taken as fifth course for no credit at no cost.
One-term course offered either term
Activity: Lecture
1 Course Unit

CIS 999 Thesis/Dissertation Research
For students pursuing advanced research to fulfill Ph.D. dissertation requirements.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Computer and Information Technology (CIT)

CIT 590 Programming Languages and Techniques
Introduction to fundamental concepts of programming and computer science for students who have little or no experience in these areas. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, and inheritance. Basic algorithmic techniques and informal complexity analysis. Graphical user interfaces. Substantial programming assignments in Python and Java. This course is for students who do not have an academic background in computer science and are not pursuing the Master's in Computer Information Technology and who are not graduate students in the CIS Department.
One-term course offered either term
Activity: Lecture
1 Course Unit

CIT 591 Introduction to Software Development
Introduction to fundamental concepts of programming and computer science. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, inheritance, and interfaces. This course will also focus on best practices and aspects of software development such as software design, software testing, pair programming, version control, and using IDEs. Substantial programming assignments.
One-term course offered either term
Activity: Lecture
1 Course Unit

CIT 592 Mathematical Foundations of Computer Science
This course introduces you to math concepts that form the backbone of the majority of computer science. Topics covered include sets, functions, permutations and combinations, discrete probability, expectation, mathematical Induction and graph theory. The goal of the course is to ensure that students are comfortable enough with the math required for most of the CIS electives. CIS 502 and CIT 596 heavily rely on concepts taught in this course.
One-term course offered either term
Activity: Lecture
1 Course Unit

CIT 593 Introduction to Computer Systems
This course provides an introduction to fundamental concepts of computer systems and computer architecture. You will learn the C programming language and an instruction set (machine language) as a basis for understanding how computers represent data, process information, and execute programs. The course also focuses on the Unix environment and includes a weekly hands-on lab session.
One-term course offered either term
Activity: Lecture
1 Course Unit

CIT 594 Data Structures and Software Design
This course will focus on data structures, software design, and advanced Java. The course starts off with an introduction to data structures and basics of the analysis of algorithms. Important data structures covered will include arrays, lists, stacks, queues, trees, hash maps, and graphs. The course will also focus on software design and advanced Java topics such as software architectures, design patterns, networking, multithreading, and graphics. We will use Java for the entire course.
One-term course offered either term
Prerequisite: CIT 591 or consent of the instructor
Activity: Lecture
1 Course Unit

CIT 595 Computer Systems Programming
This course builds on your knowledge of C and focuses on systems programming for Linux, specifically the libraries that programmers use for threading and concurrency, synchronization, inter-process communication, and networking. The course also introduces the C++ programming language, and covers important concepts in modern operating systems, including processes, scheduling, caching, and virtual memory. After completing this course, you will have the requisite knowledge and experience for systems-focused CIS graduate-level electives.
One-term course offered either term
Prerequisites: CIT 593 or equivalent.
Activity: Lecture
1 Course Unit

CIT 596 Algorithms and Computation
This course focuses primarily on the design and analysis of algorithms. We will begin with sorting and searching algorithms and then spend most of the course on graph algorithms. In order to study graph algorithms, general algorithm design patterns like dynamic programming and greedy algorithms will be introduced. A section of this course is also devoted to understanding NP-Completeness.
One-term course offered either term
Prerequisite: CIT 592 or equivalent
Activity: Lecture
1 Course Unit
Creative Writing (CRWR)

CRWR 101 Creative Writing
The Craft of Creative Writing is designed for students who are new to creative writing or who would like to return to the fundamentals of craft. Through frequent writing assignments, assigned readings and collaborative discussions, students familiarize themselves with a variety of styles and approaches, exploring a range of literary genres including poetry, fiction, creative nonfiction, memoir and journalistic prose. Students are expected to hone their skills in creative practice, to revise and take risks with their work and to cultivate their habits of close reading and peer workshop.
Activity: Online Course
1 Course Unit

CRWR 160 Modern and Contemporary US Poetry
In this fast-paced introductory course, students read and discuss a wide range of modern and contemporary American poets, beginning with Emily Dickinson and Walt Whitman and ending with 21st-century avant-garde poets like Tracie Morris. Questions central to this course include "How does experimental poetry help us understand the transition between modernism and postmodernism?" and "What is the relationship between experimental poetry and experimental teaching?" The poems and poets we study challenge students to read critically and think differently about what a poem is, about what art can be and about what poetry can teach us about reading, writing and learning. Students do not need to have any prior knowledge of poetry or poetics. The course operates primarily as a discussion. Rather than attending lectures, students participate in web-based discussions of the poems, accessible in text, audio and video formats. Requirements include active participation in the online discussion forums, in addition to five short papers, quizzes, creative exercises and a comprehensive final examination.
Activity: Online Course
1 Course Unit

CRWR 300 Writing About Place
This multi-genre, collaborative workshop is devoted to writing of and about place both literally writing about the city or the landscape, for example, and figuratively writing that engages thematically and formally with location, with displacement and with the writing process itself, as a form of mapping and belonging.
Activity: Online Course
1 Course Unit

Criminology (CRIM)

CRIM 100 Criminology
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories and data predicting where, when, by whom and against whom crimes happen. It also addresses the prevention of different offense types by different kinds of offenders against different kinds of people. Police, courts, prisons, and other institutions are critically examined as both preventing and causing crime. This course meets the general distribution requirement.
For BA Students: Society Sector
Course usually offered in fall term
Also Offered As: SOCI 233
Activity: Lecture
1 Course Unit

CRIM 200 Criminal Justice
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.
For BA Students: Society Sector
Course usually offered in spring term
Also Offered As: SOCI 200
Activity: Lecture
1 Course Unit

CRIM 240 Forensic Analysis
This course discusses the need for stronger scientific foundations in the analysis of forensic evidence from a scientific and a policy perspective. Forensic evidence, such as fingerprints, firearms, and hair, has been analyzed for hundreds of years to inform crime investigations and prosecutions. However, recent advances, especially the use of DNA technology, have revealed that a faulty forensic analysis may have contributed to wrongful convictions. These advances have demonstrated the potential danger of information and testimony derived from imperfect analysis, which can result not just in wrongful convictions but also in errors of impunity. In this course, students learn about the history of forensics, as well as about the recent advances that aim to improve current practices. It is an interdisciplinary course, but it focuses mostly on the statistical and scientific aspects of testing in forensics. Students discuss recent solutions that quantify the uncertainty, limitations, and errors associated with human factors, pattern evidence, and digital evidence. No prior statistical or forensic knowledge is expected.
The course will be useful for students who wish to become forensic practitioners, law enforcement officers, lawyers, judges, researchers, or simply informed citizens.
Taught by: Cuellar
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CRIM 250 Statistics for the Social Sciences I
Statistical techniques and quantitative reasoning are essential tools for properly examining questions in the social sciences. This course introduces students to the concepts of probability, estimation, confidence intervals, and how to use the statistical concepts and methods to answer social science questions. The course will require the use of R, a free, open source statistical analysis program. This course has been approved for the quantitative data analysis requirement (QDA).
Taught by: Ridgeway
Course usually offered in fall term
Activity: Lecture
1 Course Unit
CRIM 251 Statistics for the Social Sciences II
In this course, students learn to conduct quantitative data analyses for social sciences, with an emphasis on identifying causal relationships in data. Many social science analyses aim to answer causal questions: Do longer prison sentences reduce crime? Do tougher gun laws reduce homicides and suicides? Can summer jobs help keep youth safe? Students will learn about research designs and data analysis methods to answer these kinds of questions, and especially to learn to implement them in practice. The goal of this class is to help students conduct their own analyses, and to become critical readers of statistical analyses, both in social science publications and in public discourse. The focus will be on what to compute and how to interpret the results. The emphasis is on the intelligent use of statistics. We will be using R, an open-source programming language.
Course usually offered in spring term
Prerequisite: CRIM 250
Activity: Lecture
1 Course Unit

CRIM 260 Crime and Human Development
One of the central research problems in criminology is the relationship between human development and the likelihood of committing crime. This course will examine the tools for measuring the onset of crime, its persistence, intermittency, and desistence. These tools include the study of birth cohorts of everyone born in a certain time and place, life course studies of juvenile delinquents and non-delinquents, trajectory analysis of people studied from pre-school through middle age, and interviews with 70 year old former delinquents who reflect on how their life-course affected the crimes they committed. This course will also examine the research findings that have been produced using these tools. Students will be asked to consider what these findings imply for major theories of crime causation as well as policies for crime prevention.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

CRIM 270 Biopsychosocial Criminology
Is there a “natural-born killer”? Why don’t psychopaths have a conscience? And is it morally wrong for us to punish those who are biologically-wired for a life of crime? This interdisciplinary biosocial course argues that answers to these inscrutable questions can be found in the fledgling field of “neurocriminology”. This new sub-discipline brings together the social, clinical, and neurosciences to help us better understand, predict, and prevent future crime. We will explore the biosocial bases to crime and violence, analyze controversial neuroethical, legal and philosophical issues surrounding neurocriminology, and take a field trip to prison. This interdisciplinary course presents perspectives from the fields of psychology, neuroscience, crime, criminal justice, sociology, law, business, public health, psychiatry, anthropology, neuroimaging, neuroendocrinology, forensics, nutrition, and pediatrics. It is suitable for those without a background in biology or criminology. It is particularly relevant for majors in Criminology, Psychology, Nursing, and Biological Basis of Behavior.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CRIM 280 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g., adolescents) or conflicts (e.g., competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.
Course usually offered in spring term
Also Offered As: URBS 280
Activity: Seminar
1 Course Unit

CRIM 300 Law and Criminal Justice
This course explores constitutional criminal procedure or the law of the Fourth, Fifth, and Sixth Amendments to the United States Constitution. Topics included the rules and rights associated with search and seizure, arrest, interrogation, the exclusionary rule, and deprivation of counsel. Social science evidence that supports or raises questions about legal doctrine will be examined. No prerequisites are required.
One term course offered either term
Activity: Lecture
1 Course Unit

CRIM 315 American Death Penalty in Theory and Practice
Over the past forty years, in response to controversy over the American death penalty, the Supreme Court has created a framework of rules designed to make the death penalty conform to current societal standards. In this course, we will identify the critical issues identified by the courts (and the critics) in light of the practical realities of capital litigation, and we will ask whether the efforts to address these issues have been successful. The class will use specific case examples to identify the critical points in a death penalty case: for example, the decision to designate a prosecution as "capital", the performance of defense counsel, the penalty decision, and the method of execution. These critical stages will provide a platform for discussing critical issues like the proper limits of discretion; bias; cruelty; and the decision to disqualify certain groups of people from capital punishment (the mentally disabled, minors).
Taught by: Dolgenos
Course usually offered in fall term
Activity: Lecture
1 Course Unit
CRIM 402 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, web scraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Course usually offered in fall term
Also Offered As: CRIM 602
Activity: Lecture
1 Course Unit

CRIM 410 Research Seminar in Experiments in Crime and Justice
This seminar focuses on examining data from experiments in criminology including randomized controlled trials of criminal justice policies, "natural" experiments in crime, and other quasi-experimental studies. A series of experiments conducted by Penn scholars and elsewhere will be examined. This seminar also guides criminology majors in writing a research proposal for their thesis. Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student's senior thesis and to satisfy the senior capstone requirement. Readings will come from the disciplines of criminology, sociology, psychology, economics, and urban planning.
Course usually offered in fall term
Also Offered As: CRIM 610, SOCI 410
Prerequisites: Any statistics or research methods courses leading to familiarity with Excel, SPSS, R, Stata, SAS, Matlab, or NumPy.
Activity: Seminar
1 Course Unit

CRIM 450 Senior Research Thesis
Senior Research Thesis is for senior Criminology majors only. Students are assigned advisors with assistance from the Undergraduate Chair.
Course usually offered in spring term
Activity: Senior Thesis
1 Course Unit
Notes: CRIM 410

CRIM 474 Modern Regression for the Social, Behavioral and Biological Sciences
This course covers supervised learning: various forms of nonparametric regression and machine learning. It assumes at least one solid course in conventional linear regression, although that framework is discarded the first week of class. Intuitive explanations for key statistical concepts are provided with little dependence on formal mathematics. Grades are based on research reports in which modern statistical procedures are applied to real and challenging datasets. Some might call these exercises "analytics". All class demonstrations are done with the programming language R, and R is required for the research reports.
Course usually offered in spring term
Also Offered As: STAT 474, STAT 974
Activity: Lecture
1 Course Unit

CRIM 535 Introduction to Quantitative Methods for Policy Analysis
This course provides an introduction to applied statistical techniques in the social sciences and is tailored, in particular, to students pursuing the master of science degree in the Department of Criminology. It is taught as a basic course in statistics and presumes minimal mathematical or statistical background. We'll begin with a brief introduction to the research process. We'll then cover the computation, interpretation and understanding of basic descriptive statistics, distribution, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, we will cover several more advanced topics in regression analysis at the end of the semester.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CRIM 600 Pro-Seminar in Criminology
This course provides an overview of the leading criminological theories of crime. The central focus is on the major theories of crime developed over the past century from the disciplines of economics, psychology, and sociology. The course will focus on the application of social science research as a way to evaluate theories of crime. Special attention is devoted to the issues of measurement of crime and what is known from the available empirical data. In addition, the course will focus on how these theoretical perspectives relate to public policy responses to crime.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CRIM 601 Pro-Seminar in Criminal Justice
This course provides and overview of what we know about the criminal justice system in the United States and other developed nations. The central purpose of the course is to increase your knowledge about how the U.S. criminal justice system works but we will also spend a great deal of time thinking about the quality of the available evidence and how we know what we know. Topics covered will vary from year to year; recent topics have included police use of force, capital punishment, pre-trial detention, the use of predictive algorithms in the criminal justice system and the relationship between immigration and crime in the United States.
Course usually offered in spring term
Prerequisite: CRIM 600
Activity: Seminar
1 Course Unit

CRIM 602 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is organized around key questions about police shootings, victimization rates, identifying crime hotspots, calculating the cost of crime, and finding out what happens to crime when it rains. On the way to answer these questions, the course will cover topics including data sources, basic programming techniques, SQL, regular expressions, web scraping, and working with geographic data. The course will use R, an open-source, object oriented scripting language with a large set of available add-on packages.
Course usually offered in fall term
Also Offered As: CRIM 402
Activity: Lecture
1 Course Unit
CRIM 603 Research Methods/ Crime Analysis
This course provides an overview of the application of social science research methods and data analysis to criminology. Students will learn research design principles and statistical techniques for the analysis of social science data, including how to interpret results as part of the rigorous practice of evidence-based criminology. M.S. students will conduct a semester-long, data-intensive crime analysis project using quantitative methods to address a specific research question. Student projects culminate with a poster presentation, an oral defense, and the submission of a written research paper.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

CRIM 604 Criminology in Practice
In this capstone course, students will meet weekly with guests who work on or close to the front line of the criminal justice system. Past guests have included police chiefs, forensic scientists, lobbyists for gun rights and lobbyist for gun control, formerly incarcerated individuals, crime analysts, directors of sentencing commissions, prosecutors and defenders, politicians, and researchers at research organizations working closely with criminal justice agencies. Guests share their career paths, the roles of their organizations in the justice system, and key justice system challenges. Students interact with all guest speakers.
Two terms. student must enter first term.
Activity: Seminar
1 Course Unit

CRIM 634 Evidence-Based Crime Prevention
This course considers the use of evidence to identify effective crime prevention policies. The course will teach students to think critically about what constitutes convincing evidence, use benefit-cost analysis in comparing policy alternatives, and write effective policy memos that can translate research into practice. We will develop these skills by studying the effects of different policy approaches to crime prevention including incarceration, policing, gun control, drug regulation, and place-based interventions, as well as education, social programs, and labor market policies. Emphasis will be on the methodological challenges to identifying "what works" and the empirical methods to overcome those challenges.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

CRIM 671 Violence: A Clinical Neuroscience Approach
Developed for both Psychology and Criminology graduates in particular, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience-neuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropsychology, molecular and behavioral genetics- are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide, domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.
Course usually offered in fall term
Also Offered As: PSYC 671
Activity: Lecture
1 Course Unit

CRIM 700 Advanced Pro-Seminar in Criminology
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the unifying perspectives of criminology. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the causes and prevention of crime will report on their developing research ideas.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

CRIM 701 Advanced Pro-Seminar in Criminal Justice
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the behavior and operation of criminal law systems. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published and unpublished research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the behavior of criminal law will report on their developing research ideas.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

CRIM 999 Independent Study and Research
Primarily for advanced students who work with individual faculty upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Both terms.
Demography (DEMG)

DEMG 535 Quantitative Methods in Sociology I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and—with the permission of the instructor—advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory "lab.”
Taught by: Allison, Smith, Kohler
Course usually offered in fall term
Also Offered As: SOCI 535
Prerequisite: Basic algebra
Activity: Lecture
1 Course Unit

DEMG 536 Quantitative Methods in Sociology II
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results.
Taught by: Allison, Kohler, Park, Schnitker, Smith
Course usually offered in spring term
Also Offered As: SOCI 536
Prerequisite: SOCI 535 or permission of instructor
Activity: Lecture
1 Course Unit

DEMG 541 Gender, Lbr Free & Mkts
Course not offered every year
Also Offered As: GSWS 532, SOCI 541
Activity: Seminar
1 Course Unit

DEMG 604 Methodology of Social Research
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers’ claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper. The course is required and restricted to second year students in sociology and demography.
Taught by: Smith, Wilde, Zuberi
Course usually offered in spring term
Also Offered As: SOCI 604
Activity: Lecture
1 Course Unit

DEMG 607 Introduction to Demography
A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors.
Course usually offered in fall term
Also Offered As: SOCI 607
Activity: Lecture
1 Course Unit

DEMG 609 Basic Methods of Demography
The course is designed to introduce students to basic concepts of demographic measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets.
Taught by: Elo, Guillot, Smith
Course usually offered in fall term
Also Offered As: SOCI 609
Activity: Lecture
1 Course Unit

DEMG 611 Struct Equation Model
Statistical modeling with multiple equations and latent variables. The first part of the course will focus on linear models that could be estimated with any of the well-known SEM programs (e.g., LISREL, EQS, or Amos). Both Mplus and SAS will be used exclusively in this part of the course. The second part will focus on Mplus models for variables that are categorical, count, or censored. Maximum likelihood methods for missing data will also be covered.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 611
Activity: Lecture
1 Course Unit

DEMG 612 Categorical Data Analysis
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomyl. Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinominal logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 612
Activity: Lecture
1 Course Unit

DEMG 613 Event History Analysis
An applications-oriented course on statistical methods for the analysis of longitudinal data on the occurrence of events, also known as survival analysis, failure-time analysis, hazard analysis or duration analysis. Emphasis on regression-like models in which the risk of event occurrence is a function of a set of explanatory variables. Topics include accelerated failure-time models, hazard models, censoring, Cox regression models, time-dependent covariates, competing risks, repeated events, unobserved heterogeneity, discrete-time methods.
Taught by: Allison
Course not offered every year
Also Offered As: SOCI 613
Prerequisite: SOCI 536 or equivalent
Activity: Lecture
1 Course Unit
DEM 621 Health, Mortality & Population Aging
The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.
Taught by: Elos
Course not offered every year
Also Offered As: SOCI 621
Activity: Lecture
1 Course Unit

DEM 622 Fertility
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.
Taught by: Smith, Kohler, H
Course not offered every year
Also Offered As: SOCI 622
Activity: Seminar
1 Course Unit

DEM 630 Advanced Special Topics
Topics vary from semester to semester. Course titles include: Race, Colonialism & Methods; Mistakes, Errors, Accidents & Disasters, Graduate Research Practicum, Sociology of Violence: Gangs & Organized Crime.
Course not offered every year
Also Offered As: AFRC 630, SOCI 630
Activity: Seminar
1 Course Unit

DEM 634 Population Processes II
Population Processes II is part of a two-course sequence designed to introduce students to the core areas of demography (fertility, mortality, and migration) and recent developments in the field. PP II is divided into two parts. The first focuses on family demography and the biological, social and demographic factors explaining levels, trends, and differentials in human fertility transition with an emphasis on the historical and current course of fertility transition in developed and developing countries. The second part of the course provides a comprehensive review of theories and research on international migration. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation, including the relationship between gender and migration.
Taught by: Flippens, Harknett, Kohler, Parra, Smith
Course not offered every year
Also Offered As: SOCI 634
Activity: Seminar
1 Course Unit

DEM 643 Social Stratification
This is an advanced level graduate seminar where we will review contemporary research on social stratification and mobility. We will examine empirical and theoretical studies not only in the US but also in other countries to address how the pattern of social stratification varies across societies and over time. The main topics to be discussed are social mobility, occupational attainment, educational inequality, gender and race, and family processes and stratification. We will also examine studies that address how national contexts mediate social stratification. Advanced undergraduate students will be admitted with permission.
Taught by: Jacobs, Park
Course not offered every year
Also Offered As: SOCI 643
Activity: Lecture
1 Course Unit

DEM 662 Panel Data Analysis
Course not offered every year
Also Offered As: SOCI 662
Activity: Lecture
1 Course Unit

DEM 677 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes significant attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.
Taught by: Flippens
Course not offered every year
Also Offered As: SOCI 677
Activity: Seminar
1 Course Unit

DEM 707 Second-Year Research Seminar I
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master’s papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in fall term
Also Offered As: SOCI 707
Activity: Seminar
1 Course Unit
DEM 708 Second-Year Research Seminar II
Demography 708 is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. In DEM 708 students are expected to finalize the analyses and complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Course usually offered in spring term
Also Offered As: SOCI 708  
Activity: Seminar  
1 Course Unit

DEM 731 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Pre-requisites: DEM 609 and SOCI 536 (or its equivalent).
Taught by: Smith  
Course not offered every year
Also Offered As: SOCI 731  
Prerequisites: DEM 609 and SOCI 536 (or its equivalent)
Activity: Seminar  
1 Course Unit

DEM 796 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women’s participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG 535, DEMG 536 or DEMG 609.
Taught by: Kohler  
Course not offered every year
Also Offered As: SOCI 796  
Activity: Lecture  
1 Course Unit

DEM 999 Independent Study
Primarily for advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
One term course offered either term
Activity: Independent Study  
1 Course Unit

Dutch (DTCH)

DTCH 000 Dutch As A Foreign Language
Activity: Lecture  
1 Course Unit

DTCH 101 Elementary Dutch I
A first semester language course covering the core Dutch grammar and vocabulary with the goal of providing the corner stone for developing overall linguistic proficiency in Dutch.
For BA Students: Language Course
Taught by: Naborn  
Course usually offered in fall term
Also Offered As: DTCH 501  
Activity: Lecture  
1 Course Unit

DTCH 102 Elementary Dutch II
Continuation of DTCH 101.  
For BA Students: Language Course
Taught by: Naborn  
Course usually offered in spring term
Also Offered As: DTCH 502  
Activity: Lecture  
1 Course Unit

DTCH 103 Intermediate Dutch I
A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.
For BA Students: Language Course
Taught by: Naborn  
Course usually offered in fall term
Also Offered As: DTCH 503  
Prerequisites: DTCH 102 or equivalent.
Activity: Lecture  
1 Course Unit

DTCH 104 Intermediate Dutch II
A fourth semester Dutch language course.
For BA Students: Last Language Course
Taught by: Naborn  
Course usually offered in spring term
Also Offered As: DTCH 504  
Prerequisites: DTCH 103 or equivalent.
Activity: Lecture  
1 Course Unit

DTCH 230 Topics in Dutch Studies.
Topics vary annually.
Course not offered every year
Also Offered As: COML 229, GRMN 230
Activity: Lecture  
1 Course Unit
Notes: Taught in English
DTCH 261  Netherlandish Art
Dutch and Flemish painting in the 15th and 16th centuries with special
emphasis on the contributions of Robert Campin, Jan van Eyck and Roger
van der Weyden, Bosch, and Bruegel.
Taught by: Silver
Course not offered every year
Also Offered As: ARTH 262, ARTH 662
Activity: Lecture
1 Course Unit

DTCH 262 Topics in North Baroque
Taught by: Silver
Course not offered every year
Also Offered As: ARTH 362
Activity: Seminar
1 Course Unit
Notes: Topics vary.

DTCH 501 Elementary Dutch I
A first semester Dutch language course covering the core Dutch grammar
and vocabulary with the goal of providing the corner stone for developing
overall linguistic proficiency in Dutch.
For BA Students: Language Course
Taught by: Naborn
Course usually offered in fall term
Also Offered As: DTCH 101
Activity: Lecture
1 Course Unit

DTCH 502 Elementary Dutch II
Continuation of DTCH 501.
For BA Students: Language Course
Taught by: Naborn
Course usually offered in spring term
Also Offered As: DTCH 102
Activity: Lecture
1 Course Unit

DTCH 503 Intermediate Dutch I
A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.
For BA Students: Language Course
Taught by: Naborn
Course usually offered in fall term
Also Offered As: DTCH 103
Prerequisites: DTCH 502 or equivalent.
Activity: Lecture
1 Course Unit

DTCH 504 Intermediate Dutch II
For BA Students: Last Language Course
Taught by: Naborn
Course usually offered in spring term
Also Offered As: DTCH 104
Activity: Lecture
1 Course Unit

Topics vary annually. Topic for Spring 2016 is: “20th Century Paintings and Literature in the Low Countries”
Course not offered every year
Also Offered As: COML 532, GRMN 555
Activity: Seminar
1 Course Unit

DTCH 601 The Title for Spring 2014 is: German Prints & Drawings.
Development of the major graphic media and subjects from Schongauer through the sixteenth century. Regular visits to Philadelphia Museum of Art.
Taught by: Silver
Course not offered every year
Also Offered As: GRMN 679
Activity: Lecture
1 Course Unit
Notes: Topics vary.

DTCH 661 Topics in N. Ren Art
Course not offered every year
Also Offered As: ARTH 761
Activity: Seminar
1 Course Unit
Notes: Topics vary.

DTCH 665 Topics in North Baroque
Taught by: Silver, Larry
Course not offered every year
Also Offered As: ARTH 765
Activity: Seminar
1 Course Unit
Notes: Topics vary.

East Asian Languages & Civilization (EALC)

EALC 001 Introduction to Chinese Civilization
Survey of the civilization of China from prehistoric times to the present.
For BA Students: History and Tradition Sector
Taught by: Goldin, Atwood, Smith, Cheng
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EALC 002 Introduction to Japanese Civilization
Survey of the civilization of Japan from prehistoric times to the present.
For BA Students: History and Tradition Sector
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Fulfills Cross-Cultural Analysis
EALC 003 Introduction to Korean Civilization
This gateway course surveys the history of Korea from early times to the present. We will study the establishment of various sociopolitical orders and their characteristics alongside major cultural developments. Covered topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations; responses to Western imperialism; and Korea's increasing presence in the modern world as well as its future prospects. Students will also be introduced to various interpretive approaches in the historiography.
For BA Students: History and Tradition Sector
Taught by: Park
One term course offered either term
Also Offered As: HIST 098
Activity: Lecture
1 Course Unit

EALC 007 East Asia: Past and Present
This course surveys the history of East Asia from early times to the present. We will study the establishment of various sociopolitical orders and their characteristics alongside major cultural developments. Covered topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations; responses to imperialism; and East Asia's growing stature in the modern world as well as future prospect.
Although a main focus will be on understanding how the regions we now know as China, Japan, and Korea emerged with their respective identities, the course will also give attention to various groups that are rarely noticed in the contemporary world but nonetheless historically important, such as the Tibetans, Khitans, Jurchens, Mongols, and Manchus.
Taught by: Park
Also Offered As: HIST 005
Activity: Lecture
1 Course Unit

EALC 008 East Asian Religions
This course introduces religious traditions in China, Japan, and Taiwan from ancient to contemporary times, with emphasis on their sociopolitical contexts, visual and material dimensions, and entanglement with gender, sexuality, and the body.
We will examine the history of Confucianism, Daoism, Buddhism, Shinto, as well as the practices, thoughts, and institutions that do not fall squarely into those categories. We will pay attention to the relationship between textual and oral traditions, and that between canons, rituals, and popular practices from both historical and anthropological perspectives.
Taught by: Cheng H
Course usually offered in fall term
Also Offered As: RELS 172
Activity: Lecture
1 Course Unit

EALC 013 Art and Civilization in East Asia
Survey of the major artistic traditions of East Asia from Neolithic times through the 18th century. Will serve as an introduction to upper level lecture courses that deal with the arts and civilizations of China, Korea, and Japan. Students study and handle objects during weekly session in the Museum.
For BA Students: Arts and Letters Sector
Taught by: Davis; Steinhardt
Two terms. Student may enter either term.
Also Offered As: ARTH 103, VLST 233
Activity: Lecture
1 Course Unit

EALC 015 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha and his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among the communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as "Just-War" Women's Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.
Taught by: McDaniel
One term course offered either term
Also Offered As: RELS 173; SAST 142
Activity: Lecture
1 Course Unit

EALC 034 What is Taoism?
Our main goal in this course will be to answer the question, what is Daoism? Students will be introduced to a wide variety of ideas and practices that have at one time or another been labeled as Daoist, in order to sort out the different senses of the term, and consider whether they have any common features. The course will begin with the Laozi, the most translated work in world literature besides the Bible and the one text affirmed by virtually all Daoist traditions as foundational. We will also survey several other bio-spiritual practices, such as the meditational techniques of Internal Alchemy and the self-cultivation regimens known today as Qigong and Tai-chi, and familiarize ourselves with the theological and ritual foundations of the organized religious tradition known as Daoism, which is still widely practiced across East Asia. No knowledge of Chinese is presumed. All readings will be in English.
Taught by: Goldin
Course usually offered in fall term
Also Offered As: RELS 184
Activity: Lecture
1 Course Unit
EALC 041 Late Imperial China
From an Eurasian empire ruled by Mongols to an ethnically defined Han Chinese Ming dynasty, then again to a multi-ethnic empire ruled by a minority group of Manchus, the disruptions and transformations in the very idea of "China" in the past seven centuries defies our modern notion of China as a unitary nation with the world's longest continuous cultural tradition. How to understand the continuities and discontinuities of the last three imperial dynasties of China will be the central focus of our survey. How did these different ethnic groups adjust to each other's way of life? Did complicated cultural interaction prompt different visions of empires? How did the meaning of "Chinese change over this time period? How did international politics shape the fate of Chinese empires? With no assumption of prior knowledge, lectures open with an overview of Chinese society before the eve of the Mongolian invasion, and then trace the changing visions of ethnic and social orders in the subsequent regimes ruled by three different ethnic groups (Mongolian, Han Chinese, and Manchurian). We will examine and compare bureaucratic operations, cultural ideals, domestic and international policies from above as well as the daily life experiences from below. The course will conclude with an analysis of the collapse of the imperial order at the beginning of the twentieth century, after it was severely challenged by a semi-Christian Utopian movement from within and global drug trade imperialist attacks from without.
Taught by: Fei
One term course offered either term
Also Offered As: HIST 096
Activity: Lecture
1 Course Unit

EALC 055 Monsters of Japan
Godzilla! Mothra! Rodan! Totoro! Pikachu! If you know who they are, join us to discover the deeper meanings of monstrosity in Japan. If you don't know who they are, learn the literal, metaphorical, and cinematic implications of these giant (and not so giant) beasts. Watch Tokyo go down in flames, and discuss what that means for New York and Philadelphia! Explore the history, literature, and films of Japanese monsters in this undergraduate seminar.
Taught by: Chance, F
Course not offered every year
Also Offered As: CIMS 055
Activity: Seminar
1 Course Unit

EALC 064 Sushi & Ramen: Making Japanese Food Global
Who defines Japanese food? Is it the chef at a top establishment in Tokyo, a home cook in Osaka, a tea master in Kyoto, the ancient capital? Or is it the midwestern American who thinks sushi means raw fish? Is it the person who scarfs cup noodles, or the devotee of artisan ramen stock? Perhaps it is the Japanese government, which in 2006 sent undercover agents abroad to guard against inferior Japanese food outlets. In this class we will consider how Japanese food came to be defined in distinction to Western and Chinese foods beginning in the nineteenth century, and how Japanese food became a global cuisine. Among our questions: What makes a dish Japanese? How did Portuguese or Spanish frying habits (tempura) and Chinese lambian (ramen) become hallmarks? How traditional is the diet of rice and fish, and in what ways does it interact with the environment? How did Buddhist vegetarians justify sakiyaki? What relationship does food have to the longevity of Japanese today? How does gender affect Japanese food cultures? What are the origins of Iron Chef and bento? We will survey the Philadelphia Japanese food scene and learn to make our own sushi. Some controversies we will discuss include the consumption of whale meat in Japan. We will also investigate Japanese government controls of food to combat obesity and to make food safe, after the Fukushima nuclear catastrophe. Materials include essays, films, novellas, menus, and cookbooks.
Taught by: Chance, L
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Freshmen Seminar

EALC 069 Japanese Popular Culture
Today, Japanese manga, anime, J-pop, and film have a global audience. But these exports can only be truly understood in light of longstanding domestic anxieties about sex, violence, gender, and "the kids these days." More recent concerns about the country's declining birthrate, weakening geopolitical position, and vulnerability to natural and anthropogenic disaster also deeply influence Japanese media products. This course explores some of these anxieties through critical examinations of manga, anime, video games, television, music, and fashion in Japan. Film screenings include work by directors Kon Satoshi, Otomo Katsuhiro, Takahata Isao, Miyazaki Hayao; Itami Juzo, and Takita Yojiro; manga excerpts include work by Tezuka Osamu, Urasawa Naoki, and Yazawa Ai. Secondary readings include scholarship in anthropology, history, sociology, literature, film studies and religious studies.
For BA Students: Arts and Letters Sector
Course not offered every year
Activity: Lecture
1 Course Unit

EALC 071 Modern Japanese History
This course will survey the major political, economic, social and intellectual trends in the making of modern Japan. Special emphasis will be given to the turbulent relationship between state and society from 1800 to the present.
For BA Students: History and Tradition Sector
Taught by: Dickinson
One term course offered either term
Also Offered As: HIST 091
Activity: Recitation
1 Course Unit
EALC 086 Korean Popular Culture
"Korean Wave" (Hallyu) is currently raging throughout non-Western parts of the world, especially Asia, and may be making its way to the West. From South Korean tele-dramas and K-pop music to their respective celebrity icons, these popular cultural forms from Korea are increasingly becoming part of the everyday landscape and vocabulary. We will attempt to understand and evaluate this cultural phenomenon-its promises and limitations as well as its popularity and backlash against it. More specifically, this course explores the ways in which television, music, manhwa (comic books), and the internet participate in the transnational production and circulation of culture, modernity, tradition, ideology, and politics. Some of the more specific topics covered may include: Korean emotions and melodramas; imitation versus innovation in K-pop; fictions of history in period dramas; the marketing of new masculinity; revival of folk culture; preservation of traditional values in postmodern times; repatriation of Korean American pop stars to Korea; and youth culture. Requires outside viewing and listening.
Course not offered every year
Activity: Lecture
1 Course Unit

EALC 105 East Asian Diplomacy
This course will survey the history of relations among the great powers in East Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states-China, Japan, and Korea. We will explore the many informal, as well as formal, means of diplomacy in East Asia over the past 400 plus years.
Taught by: Dickinson
Course usually offered in fall term
Also Offered As: EALC 505, HIST 395
Activity: Recitation
1 Course Unit

EALC 108 Sports in East Asia
This course will examine sports in East Asia from the nineteenth century to the present. Recently, East Asia plays an important role in transforming the global geopolitics of sport. The post-war East Asian Olympic Games-1964 Tokyo Olympics, 1972 Sapporo Winter Olympics, 1988 Seoul Olympics, 1998 Nagano Winter Olympics, and 2008 Beijing Olympics-and the 2002 FIFA World Cup Korea/Japan illustrate the fact that a new global sports order led by East Asia has emerged. East Asia nations will play hosts to other major sporting events, including the 2018 Pyeongchang Winter Olympics, 2020 Tokyo Olympics, and 2022 Beijing Winter Olympics. Chinese, Japanese, and Korean athletes have been highly active in MLB, NBA, English Premier League, and LPGA. The popularity of the various martial arts proves that East Asian sports seem to be everywhere these days. This class will focus on helping students understand how sports have affected and transformed East Asia exploring various issues: imperialism, colonialism, race, class, gender, foreign policy, nationalism, religion, economics, industrialization, tourism, and urbanization. Course contents include lecture, discussions, secondary readings, primary source readings, documentaries, and films.

EALC 111 East Asian Digital Humanities
"Are you interested in cutting-edge digital methods for the humanities in East Asia, but don't know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. No technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects in.*

Also Offered As: EALC 511
Prerequisites: Reading knowledge (intermediate or above) of East Asian language required.
Activity: Lecture
1 Course Unit

EALC 115 Buddhist Arts of East Asia: Sources, Iconography and Styles
Survey of art and architecture created for Buddhist religious purposes in China, Japan, and to a lesser extent Korea, Tibet, and Central Asia. The course will include a brief overview of Buddhist monuments in South Asia, study of the iconography of Buddhist images in graphic and sculptural media, and analysis of a variety of Buddhist styles in painting, sculpture, and architecture.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 515, RELS 175
Activity: Lecture
1 Course Unit

EALC 116 East Asian Gardens
Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.
Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 516
Activity: Lecture
1 Course Unit
EALC 119 East Asian Ceramics
History of ceramic forms, techniques, and aesthetic principles in China, Korea, and Japan from Neolithic times to the present century, illustrated by slides and examples, augmented by readings, field trips, and student presentations. Aimed at students with general interest in Japan and/or ceramics history; particularly but not exclusively those majoring in Asian and Middle Eastern Studies, East Asian Area Studies or History of Art; also art majors interested in ceramics.

1 Course Unit

EALC 121 Chinese Poetry & Prose: In Translation
A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.
Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 521
Activity: Lecture
1 Course Unit

EALC 122 Chinese Fiction and Drama in Translation
This course explores Romance of Three Kingdoms the most popular classical novel in East Asia and an important source for understanding Chinese culture, politics, history, and military strategy. We propose to read this work not only as a textbook of Chinese literature and culture, but also as a guidebook for career development and risk assessment. Why didn’t Pang Tong have a career as successful as Zhuge Liang? Why did Ma Su volunteer in a project that he is not good at? If Cao Cao, Liu Bei, Sun Quan run for presidency in the U.S., who would you vote for and why? These are some of the questions that we will explore alongside our inquiry into the historical development of various genres of Chinese fiction. In addition to Romance of Three Kingdoms, this course introduces Sun Tsu’s The Art of War and other classical Chinese novels such as Dream of the Red Chamber and Strange Tales from a Chinese Studio, as well as classical literary criticism such as Cao Pi’s On the Standard of Literature (Dian lun), Lu Ji’s Essays on Literature (Wen lun), and Liu Xie’s The Literary Mind and the Carving of Dragons.

EALC 125 Cultural Chinas: 20th Century Chinese Literature and Film
This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China’s century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Also Offered As: EALC 525
Activity: Lecture
1 Course Unit

EALC 126 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to study in China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influence the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of works from the Peoples Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature is influenced by cross-cultural elements. All readings will be in English. No prior knowledge required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.
Taught by: Lin
Course not offered every year

EALC 151 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

1 Course Unit
Notes: Fulfills Cross-Cultural Analysis

EALC 152 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.
For BA Students: Arts and Letters Sector
Taught by: Chance
Course usually offered in fall term

Course not offered every year
Also Offered As: EALC 555
Activity: Lecture
1 Course Unit

EALC 156 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujirō, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" is also be discussed.
Taught by: Davis

Also Offered As: ARTH 213, ARTH 613, EALC 557
Activity: Lecture
1 Course Unit
Notes: Graduate students may take this course as EALC 557 and should see the instructor to discuss additional requirements for graduate credit.

**EALC 160 Introduction to Japanese Thought**

This class integrates the Japanese archaeological artifacts (ca. 240 items) and drawings (ca. 16 sheets) that were given to the Penn Museum at the World’s Columbian Exposition of 1893 as a gift from the Tokyo National Museum/Meiji Government. In this course, as students learn the basic knowledge on Japanese archaeology, they participate in the basic background research on the exposition objects. Students are then to choose his/her research topic based on this collection, and their projects and resulting research papers will be presented possibly on a newly-established website. Through their individual research projects using this collection, students will learn how to handle the archaeological artifacts, investigate the relevant data in the Penn Museum archives, and acquire the basic curatorial knowledge and skills for dating, classifying, specifying the provenience of the objects.

**EALC 162 City & Citizenship: Samurai Politics and Commoner Culture in Early Modern Japan**

In the early modern period (1600-1867), Japan underwent a staggering urban transformation. Edo, the shogunal capital, grew in barely a century from a new settlement to a sprawling metropolis of over a million. Indeed, most of Japan’s current urban centers descend directly from the castle towns built by regional warlords in the late sixteenth and early seventeenth centuries in an effort to keep the peace after over a hundred years of civil war. As a result, Japanese cities in the early modern period became a central component of what historians have called a “re-feudalization” of society, and retained strong vestiges of their military origins. At the same time the samurai-centered space of the new cities created opportunities for the development of alternative cultural practices and values by urban commoners. The juxtaposition of the regimented, honor-driven society designed and longed for by samurai and the fluid, money-driven society that grew out of the burgeoning cities’ commoner quarters is one of the animating forces of the early modern period. Through study of scholarship and contemporary sources (laws and sumptuary regulations, codes of conduct, but also diaries, novels, plays), this course will explore the many facets of early modern urban society, its medieval antecedents, and its legacies in contemporary Japan.

Activity: Lecture
1 Course Unit

**EALC 176 Japan: The Age of the Samurai**

Who (or what) where the samurai? What does it mean to say that Japan had an “Age of the Samurai”? In popular imagination, pre-modern Japan has long been associated with its hereditary warrior class. Countless movies have explored the character and martial prowess of these men. Yet warriors constituted but a tiny portion of the societies they inhabited and ruled, and historians researching medieval Japan have turned their attentions to a great range of subjects and to other classes (elite and commoner alike). This class is designed to acquaint students with the complex and diverse centuries that have been called the “Age of the Samurai”-roughly, the years between ca. 1110 and 1850. In the course of the semester, we will explore the central themes in the historiography of warrior society, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies).

**EALC 184 Two Koreas: The Politics of Division**

In today’s world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socioeconomic trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.

One term course offered either term
Also Offered As: EALC 584
Activity: Lecture
1 Course Unit

**EALC 192 Arts of Korea**

The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century.

Activity: Seminar
1 Course Unit

EALC 221 First Year Classical Chinese
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 621
Activity: Lecture
1 Course Unit

EALC 222 1st Year Classical Chin II
Continuation of CHIN 491/EALC 221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 622
Prerequisite: EALC 221
Activity: Lecture
1 Course Unit

EALC 223 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumero-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.
Taught by: Mair
Course not offered every year
Also Offered As: EALC 623
Activity: Seminar
1 Course Unit

EALC 225 Topics in Chinese Cinema
This course is an introduction to Chinese cinema in mainland China, Taiwan, and Hong Kong, with emphasis on the way it represents or negotiates notions of China and Chineseness, as well as national and cultural identity. We will examine Chinese cinematic traditions in light of significant topics such as: the foundation of Chinese cinema and the rise of nationalism; film's relationship to literary and popular cultural discourses; the pursuit of modernization; aesthetic responses to political and historical upheavals and transformations; the aesthetics of revolution, diaspora and transnationalism; visualized sexualities, violence, and youth subculture; collective desires to imagine and reinvent the cultural past; the politics of memory, mourning and amnesia, among others.
One-term course offered either term
Also Offered As: CIMS 205, EALC 625
Activity: Seminar
1 Course Unit

EALC 227 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art.
Taught by: Steinhardt
One-term course offered either term
Also Offered As: ARTH 217, EALC 627
Activity: Lecture
1 Course Unit
EALC 229 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Changan and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction.
Taught by: Steinhardt
One term course offered either term
Also Offered As: EALC 629
Activity: Lecture
1 Course Unit
Notes: Graduate-level option requires a 20-page paper and permission of the instructor

EALC 230 Gender and Religion in China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.
Taught by: Cheng, H
Course not offered every year
Also Offered As: EALC 630, GSWS 234, GSWS 630, RELS 237, RELS 630
Activity: Seminar
1 Course Unit

EALC 233 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Golchin
Course not offered every year
Also Offered As: EALC 633
Activity: Lecture
1 Course Unit

EALC 234 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this course emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Cheng
Course not offered every year
Also Offered As: EALC 634, RELS 233, RELS 634
Activity: Seminar
1 Course Unit

EALC 239 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and the study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no prerequisites, and no knowledge of Chinese is presumed.

Course not offered every year
Also Offered As: EALC 639
Activity: Seminar
1 Course Unit

EALC 240 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the end of the Han dynasty in A.D. 220. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Golchin
Course usually offered in spring term
Also Offered As: EALC 640
Activity: Seminar
1 Course Unit
**EALC 241 Law in Pre-Modern China**
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.

Taught by: Goldin
Course not offered every year
Also Offered As: EALC 641
Activity: Seminar
1 Course Unit

**EALC 242 Medicine and Healing in China**
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.

Taught by: Cheng,H
Course not offered every year
Also Offered As: EALC 642
Activity: Lecture
1 Course Unit

**EALC 243 Pastoralism & Mobility**
"Pastoralism and Mobility" will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class will focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and de-collectivization, shaped pastoralist lives?

**EALC 251 Readings in Classical Japanese I**
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.

For BA Students: Advanced Language Course
Taught by: Chance
Course usually offered in fall term
Also Offered As: EALC 651, JPAN 491
Prerequisite: JPAN 212 or equivalent
Activity: Lecture
1 Course Unit

**EALC 253 The Politics of Shinto**
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shintodriven ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an oppressive political ideology linked to the emperor system, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Also Offered As: EALC 653, RELS 271
Activity: Lecture
1 Course Unit

**EALC 254 War and Literature in Japan: Tales of the Heike**
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan’s first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no pre-requisites.

1 Course Unit
EALC 256 The Tale of Genji
"Crowning masterpiece of Japanese literature," “the world’s first novel,” “fountainhead of Japanese literary and aesthetic culture,” “a great soap opera in the vein of Jacqueline Susann.” Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu’s work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji’s loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author’s portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adapters. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale’s many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

EALC 259 Gender and Sexuality in Japan
If you have ever wondered about the following questions, then this is the right course for you: Is Japan a hyper-feminine nation of smiling geisha and obedient wives? Is it a hyper-masculine nation of samurai and economic warriors? Is it true that Japanese wives control the household? Is it true that Japanese men suffer from over-dependence on their mothers? What do young Japanese women and young men worry about? What does the government think about the future of Japanese women and men? Assuming that expressions of gender and sexuality are deeply influenced by cultural and social factors, and that they also show profound differences regionally and historically, this course examines a variety of texts—historical, biographical, autobiographical, fictional, non-fictional, visual, cinematic, analytical, theoretical—in order to better understand the complexity of any attempts to answer the above questions.

EALC 260 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we will engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.
Taught by: Davis, Chance
Course not offered every year
Also Offered As: ARTH 517, EALC 661
Activity: Seminar
1 Course Unit

EALC 264 Lawlessness and Violence in Pre-Modern Japan
This course will be an exploration of premordern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for law-breakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn’t) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.
Taught by: Spafford, D.

1 Course Unit
EALC 270 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.
Taught by: Spafford, D.

EALC 371 Intermediate Chinese
Activity: Lecture
1 Course Unit

EALC 501 Chinese History and Civilization
This seminar offers a thematic overview of the academic study of Chinese history from the Neolithic period to the 21st century. Over the course of the semester, students will be introduced to different scholarly approaches to the study of history through a close reading and analysis of the work of leading scholars in the field of Sinology. We will learn about the various subfields in the study of history, such as cultural history, social history, administrative and legal history, intellectual history, history of religion, literary history, history of gender, world history, and historiography, examine their different methodological frameworks and tools, and draw on them in order to problematize and enrich our understanding of Chinese culture. In addition, this seminar will provide incoming students with the relevant tools to produce original graduate-level research on all aspects of Chinese history, society, and culture and present it in a clear and persuasive fashion orally and in written form.
While original-language research for the final project is encouraged, all course materials will be in English.
Course usually offered in fall term
Prerequisites: Course intended for first year MA and PhD students.
Undergraduates need permission.
Activity: Seminar
1 Course Unit

EALC 502 Japanese History and Civilization
This seminar introduces students to the graduate-level study of Japan. In addition to getting a broad overview of Japanese culture, students in the course will develop familiarity with major debates in the history of the field of Japanese studies. The course also provides basic training in using primary and secondary sources in Japanese, Japanese bibliographic conventions, and other skills necessary for pursuing advanced research or a teaching career in the field. Open to all graduate students and to undergraduates with permission from the instructor. Familiarity with Japanese language is a plus but is not required.
Taught by: Thomas J

Activity: Seminar
1 Course Unit
Notes: Undergraduates need permission from instructor.

EALC 503 Korean History & Civilization
This graduate-level seminar focuses on the political, social, and cultural history of the Korean Peninsula and the vicinity from early times to the contemporary era. Readings will consist of primary and secondary sources, including influential modern studies of Korean history and civilization. All course materials are in English and no knowledge of Korean is presumed.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
EALC 504 Introduction to Inner Asian Civilizations

This class is intended for new graduate students and upper-division undergraduates with some prerequisites who wish to get a solid grounding in the study of Inner Asia. The class will introduce Inner Asia as a coherent civilization network, focusing on: 1) the steppes-imperial tradition; 2) the Tibetan-rite Buddhist commonwealth that developed from the Tibetan and Mongol empires; and 3) the increasing integration of these two Inner Asian civilizations with that of imperial China. There will also be some consideration of the Islamic Turco-Mongolian synthesis that developed in the post-Mongol period. Regionally, the class introduces: 1) core Inner Asia (the Mongolian plateau, the Tarim Basin, the Tibetan plateau, the Manchuria) and 2) the main dynasties of China that formed in the Mongolia and Manchuria (Liao, Jin, Yuan and Qing). There will also be some consideration of historically Inner Asian populations in Hexi (Gansu-Qinghai), and the North China plains and the Shaanxi-Shanxi-Rehe uplands. Chronologically, the class will touch on prehistory and the contemporary period, but will mostly cover the period from the emergence of historical records on the Mongolian plateau and the Tarim basin to roughly 1950. Prehistory and the contemporary period will be given less detailed coverage.

Course usually offered in fall term
Also Offered As: EALC 105, HIST 395
Activity: Lecture
0 Course Units

EALC 508 SPORTS IN EAST ASIA

This course will examine sports in East Asia from the nineteenth century to the present. Recently, East Asia plays an important role in transforming the global geopolitics of sport. The post-war East Asian Olympic Games (1964 Tokyo Olympics, 1972 Sapporo Winter Olympics, 1988 Seoul Olympics, 1998 Nagano Winter Olympics, and 2008 Beijing Olympics) and the 2002 FIFA World Cup Korea/Japan illustrate the fact that a new global sport order led by East Asia has emerged. East Asia nations will play hosts to other major sporting events, including the 2018 Pyeongchang Winter Olympics, 2020 Tokyo Olympics, and 2022 Beijing Winter Olympics. Chinese, Japanese, and Korean athletes have been highly active in MLB, NBA, English Premier League, and LPGA. The popularity of the various martial arts proves that East Asian sports seem to be everywhere these days. This class will focus on helping students understand how sports have affected and transformed East Asia exploring various issues: imperialism, colonialism, race, class, gender, foreign policy, nationalism, religion, economics, industrialization, tourism, and urbanization. Course contents include lecture, discussions, secondary readings, primary source readings, documentaries, and films.

Course not offered every year

EALC 511 East Asian Digital Humanities

"Are you interested in cutting-edge digital methods for the humanities in East Asia, but don't know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on Digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include textanalysis, APIs, network analysis, digital literary studies, and mapping. No technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects ise.

Taught by: Des Jardin
Also Offered As: EALC 111
Prerequisites: Reading knowledge (intermediate or above) of East Asian language required.
Activity: Lecture
1 Course Unit

EALC 515 Buddhist Arts of East Asia: Sources, Iconography and Styles

Survey of art and architecture created for Buddhist religious purposes in China, Japan, and to a lesser extent Korea, Tibet, and Central Asia. The course will include a brief overview of Buddhist monuments in South Asia, study of the iconography of Buddhist images in graphic and sculptural media, and analysis of a variety of Buddhist styles in painting, sculpture, and architecture.

Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 115, RELS 175
Prerequisites: Research in an East Asian language required for graduate credit.
Activity: Lecture
1 Course Unit

EALC 516 East Asian Gardens

Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

Activity: Seminar
1 Course Unit

EALC 521 Chinese Poetry & Prose: In translation
A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.
Taught by: Mair
Course usually offered in fall term
Also Offered As: EALC 121
Activity: Lecture
1 Course Unit

EALC 522 Chinese Fiction and Drama in Translation
This course explores Romance of Three Kingdoms the most popular classical novel in East Asia and an important source for understanding Chinese culture, politics, history, and military strategy. We propose to read this work not only as a textbook of Chinese literature and culture, but also as a guidebook for career development and risk assessment. Why didn't Pang Tong have a career as successful as Zhuge Liang? Why did Ma Su volunteer in a project that he is not good at? If Cao Cao, Liu Bei, Sun Quan run for presidency in the U.S., who would you vote for and why? These are some of the questions that we will explore alongside our inquiry into the historical development of various genres of Chinese fiction. In addition to Romance of Three Kingdoms, this course introduces Sun Tsu's The Art of War and other classical Chinese novels such as Dream of the Red Chamber and Strange Tales from a Chinese Studio, as well as classical literary criticism such as Cao Pi's On the Standard of Literature (Dian lun), Lu Ji's Essays on Literature (Wen lun), and Liu Xie's The Literary Mind and the Carving of Dragons.
Taught by: Mair
Course usually offered in spring term
Also Offered As: EALC 122
Activity: Lecture
1 Course Unit

EALC 525 Cultural Chinas: 20th Century Chinese Literature and Film
This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China's century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.
Course usually offered in spring term
Also Offered As: EALC 125
Activity: Lecture
1 Course Unit

EALC 527 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.
One-term course offered either term
Also Offered As: ARTH 214, ARTH 614, EALC 127
Activity: Lecture
1 Course Unit

EALC 529 CRITICAL THEORY CHINA
Also Offered As: EALC 129
Activity: Lecture
1 Course Unit

EALC 531 Introduction to Classical Chinese Thought
This course is intended as an introduction to the foundational thinkers of Chinese civilization, who flourished from the fifth to the second centuries B.C. No knowledge of Chinese is presumed, and there are no prerequisites, although EALC 001 (Introduction to Chinese Civilization) is recommended. Graduate students may take this course as EALC 531 and should see the instructor to discuss requirements for graduate credit. (Undergraduates must enroll in the course as EALC 131.)
Taught by: Goldin
Course offered spring; odd-numbered years
Also Offered As: EALC 131
Activity: Lecture
1 Course Unit

EALC 535 Classical Chinese Political Thought
Topic varies.
Taught by: King
Course not offered every year
Also Offered As: EALC 135
Activity: Seminar
1 Course Unit
EALC 536 Chinese Martial Arts
This course offers a thematic introduction to the history of martial arts in China. Throughout the semester, we will explore the social, political, and cultural contexts of martial arts practice, from the classical period to the 21st century. The course will take an interdisciplinary approach to situating martial arts practices in history through an examination of religious, literary, and visual sources, against the backdrop of theoretical approaches from across gender studies, anthropology, and cultural theory. The course will be divided into three units. The first unit will focus on the cultural background that led to the emergence of martial arts practices in the pre-modern period. We will examine classical discourses on the human body and its cultivation and the role of medical practices and religious institutions, such as the Shaolin Temple, in the development of martial arts regimens. In the second unit, we will discuss the spread and popularization of martial arts practices in late imperial and modern Chinese society through a close reading of literary sources, such as wuxia novels and other works of fiction. In addition, we will explore the modernization and re-invention of martial arts in the late 19th and early 20th century, when China attempts to re-establish itself as a modern nation. The third and final unit will be devoted to the global impact of Chinese martial arts in contemporary popular culture. Through a discussion and analysis of Kung Fu films, as well as video games, we will explore the role of martial arts narratives and practices in the construction of gender, cultural, and national identity and the various ways in which they are used by the current Chinese regime to assert its influence in the global arena. No knowledge of Chinese is presumed, and all readings will be available in English on the Canvas website in PDF form. Graduate students may take this course as EALC536 and should see the instructor to discuss requirements for graduate credit.

EALC 551 Contemporary Fiction & Film in Japan
Taught by: Kano
Course not offered every year
Also Offered As: CIMS 151, COML 256, EALC 151, GSWS 257
Prerequisites: This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Ichikawa Heizo, and Beat Takeshi.
Activity: Lecture
1 Course Unit

EALC 552 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words “love” and “loss” imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.
Tuition by: Chance
Course usually offered in fall term
Also Offered As: EALC 152, GSWS 152
Prerequisites: Research in an East Asian language required for graduate credit.
Activity: Lecture
1 Course Unit

EALC 555 Modern Japanese Literature
This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.
Tuition by: Kano
Course usually offered in fall term
Also Offered As: EALC 155
Activity: Lecture
1 Course Unit
EALC 556 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujirō, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This course places their films in period context, and pays particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" is also be discussed.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 290, ARTH 690, CMS 223, EALC 156
Activity: Lecture
1 Course Unit

EALC 557 Arts of Japan
This course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Taught by: Davis
One-term course offered either term
Also Offered As: ARTH 213, ARTH 613, EALC 157
Activity: Lecture
1 Course Unit

EALC 559 Topics in Japanese Art
Topic varies. Fall 2018: This course will consider Japanese woodblock prints, illustrated books, and paintings from the seventeenth through the twentieth century. Topics include: the formation of "ukiyo-e" or "the pictures of the floating world" as a genre; the development of the publishing system and its audience; specific artists and their works; the reception of Japanese prints in Europe and America; the modern reinvention of the woodblock print; and others. We will also make extensive use of the collections held in the Kislak Center, the Philadelphia Museum of Art, and in other local collections. Assignments may include: close study of a single work; web page development; research paper; regular participation in discussions.
Taught by: Davis
Course not offered every year
Also Offered As: ARTH 515
Activity: Seminar
1 Course Unit

EALC 570 Japanese Archaeology in the Penn Museum
This class integrates the Japanese archaeological artifacts (ca. 240 items) and drawings (ca. 16 sheets) that were given to the Penn Museum at the World's Columbian Exposition of 1893 as a gift from the Tokyo National Museum/Meiji Government. In this course, as students learn the basic knowledge on Japanese archaeology, they participate in the basic background research on the exhibition objects. Students are then to choose his/her research topic based on this collection, and their projects and resulting research papers will be presented possibly on a newly-established website. Through their individual research projects using this collection, students will learn how to handle the archaeological artifacts, investigate the relevant data in the Penn Museum archives, and acquire the basic curatorial knowledge and skills for dating, classifying, specifying the provenience of the objects.
Taught by: Nishimura
Also Offered As: ANTH 170, ANTH 570, EALC 170
Activity: Lecture
1 Course Unit

EALC 576 Japan: Age of the Samurai
This course deals with the samurai in Japanese history and culture and will focus on the period of samurai political dominance from 1185 to 1868, but it will in fact range over the whole of Japanese history from the development of early forms of warfare to the disappearance of the samurai after the Meiji Restoration of the 19th century. The course will conclude with a discussion of the legacy of the samurai in modern Japanese culture and the image of the samurai in foreign perceptions of Japan.

EALC 583 Readings in Korean History
Topic varies.
One- or two-term course offered either term
Also Offered As: EALC 183
Activity: Seminar
1 Course Unit

EALC 584 Two Koreas: The Politics of Division
In today's world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective.
Course not offered every year
Also Offered As: EALC 184
Activity: Lecture
1 Course Unit
EALC 592 Arts of Korea
The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century. Students enrolled in this graduate number are expected to do research in an East Asian language. Taught by: Chance, F
Course not offered every year
Also Offered As: EALC 192
Activity: Lecture
1 Course Unit

EALC 611 Life and Death in Han China
Using wall painting, sculpture, and minor arts as evidence, the course will examine the attitudes toward life and beliefs and death in Han (206 B.C.-A.D.220) China. Taught by: Steinhardt
One term course offered either term
Also Offered As: EALC 211
Activity: Seminar
1 Course Unit

EALC 616 Chinese Arts Under the Mongols
The Yuan Dynasty (1257-1368), the period of Mongolian rule, was the only time in Chinese history when China was part of a larger empire that spanned the Asian continent. Using architecture, sculpture, painting, and excavated evidence, this course examines the unique results of an international Asian world centered in China. Taught by: Steinhardt
Course not offered every year
Also Offered As: EALC 216
Activity: Seminar
1 Course Unit

EALC 621 First Year Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites. Taught by: Mair
Course usually offered in fall term
Also Offered As: CHIN 491, EALC 221
Activity: Lecture
1 Course Unit

EALC 622 1st Year Classical Chin II
Continuation of CHIN491 EALC221/621, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters. Taught by: Mair
Course usually offered in spring term
Also Offered As: CHIN 492, EALC 222
Prerequisite: EALC621
Activity: Lecture
1 Course Unit

EALC 623 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumerian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class. Taught by: Mair
Course not offered every year
Also Offered As: EALC 223
Activity: Seminar
1 Course Unit

EALC 627 Chinese Painting
Study of Chinese painting and practice from the earliest pictorial representation through the late twentieth century. Painting styles are analyzed, but themes such as landscape and narrative are considered with regard to larger social, cultural, and historical issues. The class will pay particular attention to the construction of the concepts of the "artist" and "art criticism" and their impact on the field into the present. Visits to study paintings at the University of Pennsylvania Museum and Philadelphia Museum of Art. Taught by: Steinhardt
One term course offered either term
Also Offered As: ARTH 217, EALC 227
Activity: Lecture
1 Course Unit

EALC 629 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wuai, imperial palaces in Chang'an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction. Taught by: Steinhardt
One term course offered either term
Also Offered As: ARCH 716, EALC 229
Activity: Lecture
1 Course Unit

EALC 630 Gender and Religion in China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms. Taught by: Cheng, H
Also Offered As: EALC 230, GSWS 234, GSWS 630, RELS 237, RELS 630
Activity: Seminar
1 Course Unit
EALC 633 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 233
Activity: Lecture
1 Course Unit

EALC 634 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Taught by: Wang
Course not offered every year
Also Offered As: EALC 234, RELS 233, RELS 634
Activity: Seminar
1 Course Unit

EALC 639 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity and that study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no pre-requisites, and no knowledge of Chinese is presumed.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 239
Activity: Seminar
1 Course Unit

EALC 640 Early Chinese History
This course covers the span of Chinese history from the Bronze Age to the establishment of the empire in 221 B.C. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Taught by: Goldin
Course usually offered in spring term
Also Offered As: EALC 240
Activity: Seminar
1 Course Unit

EALC 641 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.
Taught by: Goldin
Course not offered every year
Also Offered As: EALC 241
Activity: Seminar
1 Course Unit

EALC 642 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China.
Taught by: Cheng,H
Course not offered every year
Also Offered As: EALC 242
Activity: Lecture
1 Course Unit

EALC 643 Pastoralism & Mobility
"Pastoralism and Mobility" will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class will focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?
Taught by: Atwood
Course offered fall; odd-numbered years
Also Offered As: EALC 243
Activity: Seminar
1 Course Unit
EALC 651 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole. 
For BA Students: Advanced Language Course 
Course usually offered in fall term
Also Offered As: EALC 251, JPAN 491
Prerequisite: JPAN 212 or equivalent
Activity: Lecture
1 Course Unit

EALC 653 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmental left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually mute. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, or an oppressive political ideology linked to the emperor system, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Course not offered every year
Also Offered As: EALC 253, RELS 271
Activity: Lecture
1 Course Unit

EALC 654 Tales of the Heike
Our subject is Tale of the Heike, a multifacetated narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan’s first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.
Taught by: Chance, L
Course not offered every year
Also Offered As: EALC 254
Prerequisites: Research in an East Asian language required for graduate credit.
Activity: Seminar
1 Course Unit

EALC 655 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.
Taught by: Kano
One term course offered either term
Also Offered As: EALC 255, GSWS 255
Activity: Seminar
1 Course Unit

EALC 656 The Tale of Genji
"Crowning masterpiece of Japanese literature," "the world’s first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu’s work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji’s loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author’s portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adhering nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale’s many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

Also Offered As: EALC 259, GSWS 259
Activity: Lecture
1 Course Unit

EALC 661 History of the Book in East Asia
Spring 2018: From handscrolls to manga, books play a vital role in East Asian societies. In this course we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we’ll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.
Taught by: Davis, Chance
Course not offered every year
Also Offered As: ARTH 517, EALC 260
Activity: Seminar
1 Course Unit
EALC 664 Lawlessness and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for lawbreakers and political losers) and of the non-sanctioned variety (piracy, brutality, war and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn’t) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.

Activity: Seminar
1 Course Unit

EALC 670 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.
Course not offered every year
Also Offered As: EALC 270
Activity: Seminar
1 Course Unit

EALC 691 Archaeology of Central Asia
A site by site investigation of Buddhist and non-Buddhist ruins in Central Asia. Included are Nisa, Khwarazm, Pyandzhikent, Khalkhayan, Ay-Khanum, Bamiyan, Miran, Tumshuk, Kizil, Kucha, Khotan, Adzhina-Tepe, Khocho, Khara-Khoto, and Bezeklik.

EALC 731 Tang-Song Religious and Medical Texts
This seminar aims at developing the skill in reading religious and medical texts of a range of different genres from the Tang-Song period, including treatises in medical theory, non-surgical texts, recipe compilations, material medical, macrobiotic texts, Buddhist and Daoist meditation and ritual instructions, as well as case histories in anecdotal forms. There are a variety of topics we can choose to focus on in the studying those texts, and the choice will be made on the students' research interests. Each week we will look at one type of texts, consider its edition, textual history, chapter organization and genre (sometimes with background readings), read line by line a sample text assigned in advance, as well as sight-read short samples that students bring to class. At least one year Classical Chinese is required. Taught by: Cheng, H
Course not offered every year
Prerequisites: At least one year Classical Chinese is required.
Activity: Seminar
1 Course Unit

EALC 733 Song Dynasty Texts
The goal of this course is to gain a practical ability in doing research concerning the Song dynasty by utilizing Chinese primary sources. Each session we will take a type of source, look at examples of it in the library, consider indexes and other reference aids, consider historiographical uses and limitations, and do some communal reading of a sample text distributed in advance, as well as sight-reading of short samples students bring to class, prepared to translate for the class. We will cover sources including standard histories (Song shi, Liao shi, Jin shi), narrative history (Xu zuishi tongjian changbian), biographical accounts (epitaphs, index of Song biographies), diaries, letters, inscriptions, anecdotes, regional histories/gazetteers, and government documents (Song hui yao).

Taught by: Atwood
Activity: Seminar
1 Course Unit
EALC 740 Sinological Methods
This seminar is designed to acquaint graduate students with the basic methods and resources of Sinological research. The course will begin with an overview of essential reference works and aids to study, such as dictionaries and concordances, and continue with a survey of the major primary sources for the study of traditional Chinese history. Students are required to demonstrate the use of the methods learned in the course in a research paper, to be presented to the class in the form of a brief lecture at the end of the semester. Only graduate students may enroll in this course. The prerequisites are reading knowledge of modern Chinese and two years of the classical language. Familiarity with Japanese, though not required, would prove helpful.

EALC 755 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.
Taught by: Kano
Course not offered every year
Also Offered As: COML 685
Activity: Seminar

East European (EEUR)

EEUR 009 INTRO TO RUSSIA AND EURASIA: HISTORIES, CULTURES, SOCIETIES
This course is designed as a broad introduction to the study of Russia and Eurasia that will offer students a multi-disciplinary overview of the cultures, histories and societies of this large and diverse region of the world. It is organized in units that illustrate the approaches of various disciplines to the study of the region, including history, literary studies, cinema studies, art history, and social scientific inquiry. At the conclusion of the course, students will be acquainted with these various disciplinary frameworks and the differences between them, with the modes of analysis and writing that pertain to them, and with fundamental knowledge of the region. They will be prepared for further study of the region in a variety of programs of study, including the Russian and East European Studies major, for which the course serves as a foundation.
Taught by: Platt/Staff
Course usually offered in fall term
Also Offered As: RUSS 010
Activity: Lecture
1 Course Unit

EEUR 010 Central and Eastern Europe: Cultures, Histories, Societies
The reappearance of the concept of Central and Eastern Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region - its cultures, histories, and societies - from the foundation of the Holy Roman Empire to the enlargement of the European Union. Students are encouraged to delve deeper into particular countries, disciplines, and sub-regions, such as Central Europe, Eastern Europe, and the Balkans, through an individual research paper and class presentations.
Taught by: Steiner/Orenstein/Verkholantsev
Course usually offered in spring term
Also Offered As: COML 010, RUSS 009
Activity: Seminar
1 Course Unit
Notes: This course is one of two required core courses for the Russian and East European Studies (REES) Major.

EEUR 026 Behind the Iron Curtain
Course not offered every year
Also Offered As: ANTH 026, RUSS 026
Activity: Seminar
1 Course Unit

EEUR 121 Elementary Hungarian I
The elementary Hungarian I course focuses on providing reading, writing, listening and reading-comprehension skills on basic level Hungarian. Interactive class activities and authentic Hungarian material will enable students to develop language skills so they could talk about themselves and their families, discuss every day and weekend routines, express likes and dislikes, converse about school and family activities, and get acquainted with Hungarian holidays and cultural traditions.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

EEUR 122 Elementary Hungarian II
Continuation of EEURI 21. The second semester of elementary Hungarian course continues on providing functional language competency in basic grammar, vocabulary, comprehension, reading, writing and speaking in Hungarian. Students will continue to learn communicating in everyday life situations as well as in organizing a trip to Hungary, staying in a hotel, ordering meals, buying goods, and participating in cultural activities by using authentic Hungarian online resources and interactive class activities.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121 or a placement test
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.
EEUR 123 Intermediate Hungarian I
The Intermediate Hungarian I course builds on and continues the course material in Elementary Hungarian I-II. Course activities, authentic audio and video material along with Hungarian online resources will enable students to further develop their reading, writing, listening comprehension and conversational skills. Students will practice their skills by discussing and writing about their interests, student lives, travel and cultural experiences, life on campus as well as learning about Hungarian seasonal traditions, cultural events, and Hungarian student life.
For BA Students: Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121-122 or a placement test
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

EEUR 124 Intermediate Hungarian II
The intermediate Hungarian II course continues EEUR 123. Class documents and activities enable students to develop functional intermediate Hungarian competency by exploring Hungary and its culture, reading authentic online news sources, practicing listening and comprehension skills via video and audio material, researching cultural events and traditions, and exploring Hungarians’ everyday lives. At the end of the semester, students will be able to participate and pass their Oral Competency Exit Interview on intermediate level and discuss topics, such as student life, family, friends, academic and student life activities/interests, travel, shopping, and cultural events.
For BA Students: Last Language Course
Taught by: Mizsei
Two terms. student may enter either term.
Prerequisite: EEUR 121-123 or a placement test
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

EEUR 135 Cold War: A Global History
The Cold War was more than simply a military confrontation between the United States and the Soviet Union; it was the frame within which the entire world developed (for better or worse) for nearly five decades. This course will examine the Cold War as a global phenomenon, covering not only the military and diplomatic history of the period, but also examining the social and cultural impact of the superpower confrontation. We will cover the origins of the conflict, the interplay between periods of tension and detente, the relative significance of disagreements within the opposing blocs, and the relationship between the “center” of the conflict in the North Atlantic/European area and the global “periphery”.
Taught by: NATHANS
One term course offered either term
Also Offered As: HIST 135, RUSS 135
Activity: Recitation
1 Course Unit

EEUR 125 Russia and Eastern Europe in International Affairs
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia’s opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?
For BA Students: Society Sector
Taught by: Orenstein
Course not offered every year
Also Offered As: PSCI 267, RUSS 125
Activity: Lecture
1 Course Unit

EEUR 153 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes of their successes and failures, criticism of dissenters, efforts at reform, and collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.
For BA Students: Society Sector
Taught by: Orenstein
Course not offered every year
Also Offered As: PSCI 144, RUSS 134
Activity: Lecture
1 Course Unit
EEUR 159 POPULATION AND PUBLIC HEALTH IN EASTERN EUROPE
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.
Taught by: GHODSEE
Also Offered As: ANTH 159, RUSS 159, SOCI 1159
Activity: Lecture
1 Course Unit

EEUR 160 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of “freedom” and “human rights.”
Course not offered every year
Also Offered As: GSWS 160, RUSS 160
Activity: Lecture
1 Course Unit

EEUR 161 Communism & Woman Qstion
Course not offered every year
Also Offered As: RUSS 161
Activity: Seminar
1 Course Unit

EEUR 164 Russian and East European Film from the October Revolution to World War II
This course presents the Russian contribution to world cinema before WWII - nationalism of the film industry in post revolutionary Russia, the creation of institutions of higher education in filmmaking, film theory, experimentation with the cinematic language, and the social and political reflex of cinema. Major themes and issues involve: the invention of montage, Kuleshov effect, the means of visual propaganda and the cinematic component to the communist cultural revolutions, party ideology and practices of social-engineering, cinematic response to the emergence of the totalitarian state. Great filmmaker and theorist in discussion include Vertov, Kuleshov, Eisenstein, Pudovkin, Medvedkin and others.
Taught by: Todorov
Also Offered As: CIMS 164, RUSS 164
Activity: Lecture
1 Course Unit

EEUR 165 Russian and East European Film after World War II
This course examines the Russian and East European contribution to world cinema after WWII - Stalinist aesthetics and desalmination, WWII in film, the installation of totalitarianism in Eastern Europe and the Cold War in film, the fall of the Berlin Wall, the collapse of the Soviet Union and the post-soviet condition, cinematic representations of Yugoslavia’s violent breakup; the new Romanian wave. Major filmmakers in discussion include Kalatozov, Tarkovsky, Wajda, Polanski, Forman, Mentzel, Sabo, Kusturitsa, Konchalovsky, Mikhalkov and others.
Taught by: Todorov
Also Offered As: CIMS 165, RUSS 165
Activity: Lecture
1 Course Unit

EEUR 171 The Socialist City
This course will explore the ideology and politics of the socialist city in the Soviet Union, East Europe, and the Second World. We will focus on how design professionals, politicians, and residents realized utopian socialist values in the face of national design traditions, local politics, and limited resources. Beginning with the Soviet case, the course will consider how planners and architects addressed modernization, multi-family housing, and neighborhood units in new city plans. We will consider capitals, like Moscow, as well as less well known regional centers that had strong local identities, such as Tashkent, Belgrade, and Prague. We will examine the state’s use of public spaces for commemorations and preservationists’ reinterpretation of existing historic sites. In addition, we will consider how everyday residents experienced the socialist city, such as multi-family housing, shopping centers, and subway systems. We will address how citizens circumvented official state channels to obtain state housing and illegally build homes for themselves, sometimes in a folk style. The course will center on Soviet and East European cities, but also address socialist cities in Cuba and Africa whose design was influenced by transnational exchanges. Most broadly, this course explores the question, what was the socialist city? How did its planners, architects, and politicians understand it, and what did they intend to construct? And, what resulted? In the past fifteen years, North American scholars have begun to take seriously the study of the socialist city, and this course draws on the emerging scholarship on this exciting, cross-disciplinary topic. How do scholars understand the socialist city today? We will examine the shared legacies that socialist cities across East Europe shared with their Western European counterparts, as well as the particularities of design that have sparked North American scholars’ debates on what distinguished the socialist city from ones that emerged in a capitalist context. In our discussions, we will seek to understand how socialist design professionals understood their work and the emerging cities at the time, as well as how North American scholars view the socialist city today. Disciplinarily, the focus of the call will fall at the intersection of architectural history and politics.
Taught by: Aplenc
Course not offered every year
Also Offered As: RUSS 171, URBS 171
Activity: Seminar
1 Course Unit
EEUR 250 Europe: From an Idea to the Union
Employing the methods from the humanities and social sciences this interdisciplinary seminar will explore the variety of factors that contributed to dividing and uniting Europe. The continent will be considered as a geographical and cultural space and the construction of its identity will be examined through several historical periods from the Middle Ages to Modernism–comprising the rich layer of pan-European civilization across the ethnic or national borders. Finally, the structure of the European Union will be scrutinized including its institutions, decision-making mechanism, monetary union, collective security, the Grexit, and Europes changing relationship with Russia. Participants will be encouraged to select a particular topic in European studies and research it through assigned readings, film, literature, and other media
Taught by: Steiner
Also Offered As: COML 250
Activity: Lecture
1 Course Unit

EEUR 265 Yiddish in Eastern Europe
This course presents the major trends in Yiddish literature and culture in Eastern Europe from the mid-19th century through World War II. Divided into four sections - "The Shtetl," Religious vs. Secular Jews,"Language and Culture," and "Confronting Destruction" - this course will examine how Jews expressed the central aspects of their experience in Eastern Europe through history, literature (fiction, poetry, drama, memoir), film, and song.
Taught by: Hellerstein
Activity: Lecture
1 Course Unit

EEUR 430 Nationalism and Ethnic Conflict in Film
This course studies the cinematic representation of civil wars, ethnic conflicts, nationalistic doctrines, and genocidal policies. The focus is on the violent developments that took place in Russia and on the Balkans after the collapse of the Soviet Bloc and were conditioned by the new geopolitical dynamics that the fall of communism had already created. We study media broadcasts, documentaries, feature films representing the Eastern, as well as the Western perspective. The films include masterpieces such as "Time of the Gypsies," "Underground," "Prisoner of the Mountains," "Before the Rain," "Behind Enemy Lines," and others.
Taught by: Todorov
Course not offered every year
Also Offered As: CIMS 430, RUSS 430
Activity: Online Course
1 Course Unit

Economics (ECON)

ECON 001 Introduction to Micro Economics
Introduction to economic analysis and its application. Theory of supply and demand, costs and revenues of the firm under perfect competition, monopoly and oligopoly, pricing of factors of production, income distribution, and theory of international trade. Econ 1 deals primarily with microeconomics.
For BA Students: Society Sector
One term course offered either term
Activity: Recitation
1 Course Unit

ECON 002 Introductory Economics: Macro
Introduction to economic analysis and its application. An examination of a market economy to provide an understanding of how the size and composition of national output are determined. Elements of monetary and fiscal policy, international trade, economic development, and comparative economic systems.
For BA Students: Society Sector
One term course offered either term
Prerequisite: ECON 001
Activity: Recitation
1 Course Unit

ECON 010 Introduction to Economics for Business
The first part of the course covers basic microeconomic concepts such as opportunity cost, comparative advantage, supply and demand, importance of costs and revenues under perfect competition vs. monopoly, externalities and public goods. The second part of the course introduces macroeconomic data, two models of the labor market, a model of the aggregate household, and the standard AD-AS model. The course concludes with an introduction to fiscal policy, banking, and the role of the Central Bank.
Course usually offered in fall term
Activity: Recitation
1 Course Unit
Notes: For Wharton students only

ECON 013 Strategic Reasoning
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only prerequisites are some high-school algebra and having taken ECON 001.
However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).
One term course offered either term
Also Offered As: PPE 311
Prerequisites: ECON 001, some high school algebra
Activity: Lecture
1 Course Unit
Notes: This course may NOT be taken concurrently or after ECON 212.

ECON 014 American Capitalism
A broad overview of American economic history will be provided by focusing on the following topics: colonial trade patterns, the growth of the market economy, the political economy of slavery, industrial expansion, segmentation in the labor force and changes in work, technological and organizational innovations, business cycles, the rise of the corporate welfare state, the growth of monopoly capitalism, and current economic problems in historical perspective.
For BA Students: Society Sector
One term course offered either term
Also Offered As: HIST 161
Prerequisites: ECON 001, 002 or ECON 010
Activity: Recitation
1 Course Unit
ECON 024 Development Economics
This course presents an overview of the field of development economics. The general aim is to show how economic analysis has been applied to issues related to developing countries. Among the topics covered are: income distribution, poverty, health, population growth, migration, growth, and the rural economy.
One term course offered either term
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1 Course Unit
Notes: Students may NOT take ECON 024 and 261

ECON 028 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for "historical perspective" that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, "how did we get there?" It answers by providing historical insights that shed light on crucial aspects of financial disasters.
For BA Students: Humanities and Social Science S
Taught by: Flandreau
One term course offered either term
Also Offered As: HIST 131
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1 Course Unit

ECON 030 Public Policy Analysis
This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects.
One term course offered either term
Prerequisites: ECON 001, 002 or ECON 010
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 030 and 231.

ECON 032 Political Economy
This course examines the effects of strategic behavior on political outcomes and government policies. Topics and applications may include voting behavior, candidate competition, voting systems, social choice and welfare, policy divergence, redistributive policies and theories of political transitions.
One term course offered either term
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1 Course Unit
Notes: Credit will NOT be given for ECON 032 and 232

ECON 033 Labor Economics
The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor unions, discrimination, workforce diversity, poverty, and public policy.
Course usually offered in spring term
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 033 and ECON 233.

ECON 035 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues.
One term course offered either term
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 035 and 235.

ECON 036 Law and Economics
The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making.
One term course offered either term
Also Offered As: PPE 036
Prerequisite: ECON 001 or ECON 010
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 036 and ECON 234.

ECON 039 Economics and Financing of Health Care Delivery
Systematic and critical review of the present economic literature on the health care "industry". Topics include the demography and determinants of illness, the demand for curative and preventive care and determinants of recent health cost inflation, the efficacy of markets, and the role of government.
Course usually offered in fall term
Also Offered As: HCMG 202
Prerequisites: ECON 001 or ECON 010 or permission of instructor.
Activity: Lecture
1 Course Unit

ECON 050 International Economics
Introduction to the theory of international trade and international monetary economics. The theoretical background is used as a basis for discussion of policy issues. Patterns of international trade and production; gains from trade; tariffs, and impediments to trade; foreign exchange markets; balance of payments, capital flows, financial crises, coordination of monetary and fiscal policy in a global economy.
One term course offered either term
Prerequisites: ECON 001, 002, or ECON 010
Activity: Lecture
1 Course Unit
Notes: ECON 050 is a one-semester course in international economics. Students wishing to study the subject in greater depth should take instead the two-semester sequence ECON 251, 252.

ECON 101 Intermediate Microeconomics
Theories of consumer behavior, demand, production, costs, the firm in various market contexts, factor employment, factor incomes, elementary general equilibrium, and welfare.
One term course offered either term
Prerequisites: ECON 001, 002; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: Note: Incoming freshmen with AP or transfer credit for ECON 001 and ECON 002, MUST complete MATH 104, MATH 114 or MATH 115 before enrolling in ECON 101. Upper classmen must have at least a B+ in MATH 104 to take ECON 101 and MATH 114 or MATH 115 concurrently.
ECON 102 Intermediate Macroeconomics
Facts and theories about the determination of per capita income and its differences across countries and across time. The study of economic fluctuations in output and employment. The role of government in influencing these aggregate variables: monetary and fiscal policy.
One-term course offered either term
Prerequisites: ECON 001, 002, 101; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: FNCE 101 does not satisfy any of the Economics department requirements. Therefore, students are required to take ECON 102.

ECON 103 Statistics for Economists
The course focuses on elementary probability and inferential statistical techniques. The course begins with a survey of basic descriptive statistics and data sources and then covers elementary probability theory, sampling, estimation, hypothesis testing, correlation, and regression. The course focuses on practical issues involved in the substantive interpretation of economic data using the techniques of statistical inference. For this reason empirical case studies that apply the techniques to real-life data are stressed and discussed throughout the course, and students are required to perform several statistical analyses of their own.
One-term course offered either term
Prerequisites: ECON 001, 002, or ECON 010; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: Intended primarily for economics majors. ECON 103 cannot be taken by any student who has already completed Statistics at least at the level of STAT 430 (including the sequence STAT 430 and 431). Such students must take an additional 200-level course to satisfy course requirements of the major.

ECON 104 Econometrics
This course is designed to introduce students to econometric techniques and their applications in economic analysis and decision-making.
The main objective of the course is to train the student in (i) handling economic data; (ii) quantitative analyses of economic models with probabilistic tools; (iii) econometric techniques, their application as well as their statistical and practical interpretation; (iv) implementing these techniques on a computer. Estimation and inference procedures are formally analyzed for simple econometric models and illustrated by empirical case studies using real-life data. The course covers linear regression models, simultaneous-equations models, discrete choice models and univariate time series models. Estimation and inference is conducted using least squares and likelihood based techniques. Students are required to perform several econometric analyses of their own.
Course usually offered in spring term
Prerequisites: ECON 101, 103, MATH 104, MATH 114 or MATH 115 or permission from instructor
Activity: Lecture
1 Course Unit

ECON 199 Independent Study
Individual study and research under the direction of a member of the Economics Department faculty. At a minimum, the student must write a major paper summarizing, unifying, and interpreting the results of the study. This is a one semester, one c.u. course.
One-term course offered either term
Prerequisites: ECON 101, 102, 103 or written permission from the Director of Independent Research. Please see the Undergraduate Coordinator in Economics (160 McNeil) for the permission form.
Activity: Independent Study
1 Course Unit
Notes: Please see the Undergraduate Coordinator in Economics (160 McNeil) for the appropriate sequence number.

ECON 210 Economics of Family
This course will use economic tools to explore decision making and allocation of resources within the family. The course will use both economic theory and econometric evidence to investigate these issues. The impact of gender roles and differences will be examined and the effect of these differences on economic decisions and outcomes both within and outside the family will be discussed. Student participation will be an integral part of the course. During class, students will be required to evaluate data and relate it to the theoretic model covered. Student participation will also include two in-class oral presentations. Students will be working with CWIC (Communication Within the Curriculum) as they work on these presentations.
Course not offered every year
Prerequisites: ECON 101; MATH 104, MATH 114 or MATH 115.
Activity: Lecture
1 Course Unit
Notes: In addition, any 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 211 Social Choice Theory
This course investigates a topic which lies at the heart of economic, social and political sciences, namely the aggregation of individual preferences. Can a society as a whole exhibit preferences as individuals do? Can these preferences be based on individual ones, and show the same level of coherence? Which process can lead from individual preferences to the preferences of the society? At the end of the 18th century, the pioneers in the field already realized that mathematics is the only language powerful enough to make deep progress in the understanding of these questions. The formalization involves pure logic as well as geometry and combinatorics.
Course not offered every year
Prerequisites: ECON 101, MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: In addition, any 200-level LPS course (Section 601), when offered, MAY NOT count for Economics Majors, unless you are officially registered as an LPS student.
ECON 212 Game Theory
An introduction to game theory and its applications to economic analysis. The course will provide a theoretical overview of modern game theory, emphasizing common themes in the analysis of strategic behavior in different social science contexts. The economic applications will be drawn from different areas including trade, corporate strategy and public policy.
One term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: Any 200-level LPS course when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 221 Econometric Forecasting
This course provides a comprehensive introduction to forecasting in economics and business. Topics covered include statistical graphics, trends, seasonality, cycles, forecast construction, forecast evaluation and forecast combination.
One term course offered either term
Prerequisites: ECON 101, 102, 103, 104; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: In addition, any 200-level CGS course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 222 Advanced Econometric Techniques and Applications
This course introduces students to advanced study in econometrics, with an emphasis on methods used in microeconomic applications and in evaluating the effects of social interventions. The methods covered include methods for handling limited dependent variables (useful, for example, in forecasting the demand for a new good), maximum likelihood estimators, and flexible semiparametric and nonparametric estimation methods, and randomized and nonexperimental methods of estimating treatment effects. Applications of econometrics to the field of program evaluation will also be studied.
One term course offered either term
Prerequisites: ECON 101, 104; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: In addition, any 200-level LPS course, when offered WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 224 Statistical Learning and Causal Inference for Economics
ECON 224 is an applied data analysis course that introduces students to ideas from modern statistical learning and causal inference, and provides hands-on experience applying them to real-world problems using the R statistical programming language. Topics include regression, randomized controlled trials, classification, instrumental variables, shrinkage methods, random forests, regression discontinuity, and differences-in-differences.
Taught by: DiTraglia
Prerequisite: ECON 103
Activity: Lecture
1 Course Unit

ECON 231 Public Finance
This course has two parts. The first looks at market and government failures and discusses the need for public policies as well as limits to their effectiveness including the evaluation of public projects using cost benefit analysis. The second part focuses on the economic analysis of taxation, including the economic incidence and efficiency of taxes.
One term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115; ECON 103 is recommended.
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 230 and 231

ECON 232 Political Economy
This course examines the political and economic determinants of government policies. The course presents economic arguments for government action in the private economy. How government decides policies via simple majority voting, representative legislatures, and executive veto and agenda-setting politics will be studied. Applications include government spending and redistributive policies.
One term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115; ECON 103 is recommended.
Activity: Lecture
1 Course Unit

ECON 233 Labor Economics
Labor supply and labor demand, income distribution, labor market contracts and work incentives, human capital, labor market discrimination, job training and unemployment.
One term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115; ECON 103 is recommended.
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 033 and 233.

ECON 234 Law and Economics
This course will use basic microeconomic tools to understand how the law often, but not always, promotes economic efficiency. Among the areas to be discussed will be tort law, property law, intellectual property, antitrust regulation. The distinction between common law and legislative law will be drawn.
One term course offered either term
Prerequisites: ECON 101; MATH 104, MATH 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 036 and 234.

ECON 235 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, nonlinear pricing and price discrimination. These theories are used to model various industries, antitrust cases, and regulatory issues.
One term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115; ECON 103 is recommended.
Activity: Lecture
1 Course Unit
Notes: Credit cannot be received for both ECON 035 and 235
**ECON 236 Health Economics**

In this course we will use the tools of microeconomics to analyze the functioning of the health care system. We will draw from the sub-disciplines of information economics, industrial organization, labor economics, public economics, and behavioral economics. The primary goal is to use these tools to develop a critical analysis of the functioning of the health care system as well as of the policies aimed at improving it. We will learn about US specific institutional details and policies (most notably the Affordable Care Act), and we will compare them to other important international experiences.

One term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115. Wharton students can satisfy the ECON 101 prerequisite with BEPP 250 honors. The regular BEPP 250 course does not count as a substitute for ECON 101.

Activity: Lecture
1 Course Unit

Notes: For ECON majors only. Intermediate Micro is a prerequisite and this course will use advanced quantitative methods.

**ECON 237 Urban Fiscal Policy**

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

One term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit

**ECON 238 Economics of Education**

The course focuses on the educational decisions, including individual choices, institutional strategies and government policies. It is an elective course in economics and it is designed for junior and senior students. During the first part of the course we will go over the mathematical and empirical tools needed to understand and perform quantitative analysis on topics in the economics of education. Students should expect to work on optimization methods, regression analysis and causal inference analysis. We will use Stata (https://www.stata.com/) as statistical software. After we have built a solid foundation of knowledge, we will cover the first "real" topic of the economics of education: the return to schooling. During this phase of the course we seek to address two questions: what are the benefits that an individual acquires (i.e. in terms of earnings in the labor market or career opportunities) by attending more years of school and what are the benefits for society as a whole? While these questions seem to have a simple explanation, we will discover that they are actually quite challenging and require a more complex explanation. Once we have analyzed the benefits of schooling, we will study what motivates students to further their education for more years, as opposed to others. In particular, we will focus on the differences in the quality of environments that children face throughout childhood (e.g., family environment and school/classroom environment) and the consequences for observed ineguities. Finally, in the remaining portion of the course we will study the evaluations of different policies that have been implemented in the past from previous governments, with the goal of gaining insight for possible future policy recommendations.

Taught by: Agostinelli

Course usually offered in spring term
Prerequisites: ECON 101, ECON 102, ECON 103
Activity: Lecture
1 Course Unit

**ECON 241 Economic Growth**

The process of economic growth and the sources of differences in economic performance across nations are some of the most interesting, important and challenging areas in modern social science. You cannot travel or read the news without wondering why differences in standards of living among countries are so large. The primary purpose of this course is to introduce undergraduate students to these major issues and the theoretical tools necessary for studying them. The course therefore strives to provide students with a solid background in dynamic economic analysis, as well as empirical examples and data analysis.

One term course offered either term
Prerequisites: ECON 101, 102, 103; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
ECON 242 Topics in Macroeconomics
This course covers topics of interest in macroeconomics. Two sections are offered: Markets with Frictions. This course studies allocations in markets with frictions, as described by the difficulty in finding a trading partner, private information problems, commitment issues, and so on. Applications to labor markets, monetary economics, the marriage market will be discussed. The main technical tool will be search theory, but a liberal amount of calculus and other mathematics will be used. Numerical Methods for Macroeconomists. This course will study some of the numerical methods that are used in modern macroeconomics. This class will learn how to solve nonlinear equations, difference equations, interpolate functions, smooth data, and conduct Monte Carlo simulations on the computer. This will be done while studying economic problems, such as the determination of labor supply, economic growth and business cycle analysis. Calculus is an integral part of the course and some elementary probability theory will be drawn upon. The MATLAB programming language will be used.
One term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit

ECON 243 Monetary and Fiscal Policies
This is an advanced course in macroeconomics. A relatively simple, but well defined and internally consistent model of the U.S. economy is set up and used to study how output is generated given the initial resources, how output is divided between consumption and addition to capital stock, and how this process accumulates over time. The role of prices including the rate of interest in this process is also reviewed, and monetary and fiscal policies needed to improve the performance of the economy under such circumstances are discussed.
One term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115. ECON 103 is recommended.
Activity: Lecture
1 Course Unit

ECON 244 Macro-Modeling
This is an advanced undergraduate course in models of economic growth. Students will be introduced to the workhorse theoretical models that are used to understand growth by modern macrometric researchers and policy makers. The types of questions that we will address include: Why are some countries richer than others? Why do some countries grow quickly while others stagnate? Why did modern economic growth start in Western Europe? What can governments do to accelerate economic growth? How does economic growth interact with demographic and geographic factors? We will build theoretical models that can be used to answer these questions. There will be a strong focus on emphasizing the microeconomic foundations of models, and using the language of mathematics to express the underlying assumptions and assess their implications for policy. Hence, there are strict mathematical prerequisites. We will also compare the predictions of our models with the data. Thus, a fair amount of econometrics will be required. A class in statistics and econometrics is highly recommended.
Course not offered every year
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115. ECON 103 is recommended.
Activity: Lecture
1 Course Unit

ECON 246 Money and Banking
Money and Banking. This course studies the role that financial markets, institutions, and money play in resource allocation. Financial intermediation and the role of banks in the economic system are analyzed and the economic rationale behind banking regulation is studied. The course examines how monetary policy influences interest rates and asset markets, such as the bond market and the stock market. Finally, the instruments and goals of monetary policy are discussed, focusing in particular on credibility and commitment for central banks. All of the questions are explored analytically, using the tools of economic theory.
One term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit

ECON 251 International Trade
Structure of the world economy; theory of international trade; economic growth and international trade; international trade policy; developed countries; developing countries. Direct investment, technology transfers, and the multinational firm.
One term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 252 International Finance
International monetary economics with emphasis on economic policy in an open economy. Topics covered in the course include: balance-of-payments adjustment, theories of exchange rate determination, the effects of exchange rate devaluation, macroeconomic policy under fixed and floating exchange rates, the Euro-dollar market, currency and balance of payments crises.
One term course offered either term
Prerequisites: ECON 101, 102; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 260 Decision Making Under Uncertainty
This course will show how individuals make decisions in a world full of uncertainties, both normatively and descriptively. This theory will help us build skills in understanding and analyzing a choice problem with uncertainty in a systematic fashion, as well as deepening our understanding of the fundamental concept of a utility function, which plays a critical role in economic modeling. The course requires a substantial ability of abstract thinking. Homework is intended to be thought-provoking rather than skill-sharpening.
Course not offered every year
Prerequisites: ECON 101, 103; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit
Notes: All prerequisites MUST be taken prior to enrolling in this course.
ECON 261 Topics in Development
This course studies institutions in developing economies. The first section of the course will cover the organization of production in traditional agrarian societies. Topics will include land, labor and credit markets. The second section of the course will focus on the role of the community in facilitating the transition to the modern market economy. Here we will study how the community spreads information, permits the formation of informal networks and organizes collective institutions, allowing individuals to take advantage of new economic opportunities.
Course not offered every year
Prerequisites: ECON 101; MATH 104, 114, or MATH 115. ECON 103 is recommended.
Activity: Lecture
1 Course Unit
Notes: Student may not receive credit for ECON 024 and ECON 261. In addition, the LPS 200-level course, when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 262 Market Design
Markets increasingly use and create networks, both social and technological. Some examples: the complex trading networks that underlie modern financial markets and supply chains; social media platforms; dating apps. These profoundly affect the economy and society more broadly: financial interdependencies are critical in economic crises, while rumors on Twitter have come to play a central role in our politics. How can we make sense of these problems - as individuals, within companies, and as policymakers? This seminar teaches models from the economics and statistics of networks that are essential to the task. Topics include the network origins of recessions, the diffusion of information and rumors, racial segregation, and matching markets. We emphasize how network models relate to key ideas from microeconomics.
One term course offered either term
Prerequisites: ECON 101, 103; MATH 104, 114 or MATH 115.
Activity: Lecture
1 Course Unit
Notes: The LPS 200-level evening course (Section 601), when offered, WILL NOT count for Economics Majors unless you are officially registered as an LPS student.

ECON 271 Foundations of Market Economies
This course will study the historical and intellectual forces behind the appearance of market economies on the world stage. The voyages of exploration undertaken by Europeans in the 15th and 16th century created, in just a few decades, a global economy. By 1600, silver from Mexico was exchanged in Manila for ceramics made in Nanjing (China). After a long trip through the Pacific, Mexico, and the Atlantic, the ceramics ended up in the tables of prosperous merchants in Bruges (modern day Belgium). How did this integrated global economy appear? How did global interconnections over the centuries shape our current world? How did markets emerge and influence these interconnections? Who were the winners of globalization? And who were the losers? How did economists, political scientists, and others think about the strengths and weaknesses of market economies? This course will explore these questions and the role that markets have played in it from the late 15th century to the present. Even if the economic theory will structure much of the discussion, insights from intellectual history, cultural history, microhistory, legal history, and institutional history will help to frame the main narrative. The course will be, as well, truly global. First, beyond the traditional focus of economic history courses on Europe and the Americas, particular attention will be devoted to Africa and Asia. Second, the priority will be to highlight the interconnections between the different regions and to understand how the people living in them negotiated the opportunities and tensions created by the economic transformations triggered by globalization and how they conceptualized the changing lives around them. Finally, the class will highlight how diverse intellectual traditions handled the challenges presented by historical change.
One term course offered either term
Prerequisites: ECON 101; MATH 104, 114 or MATH 115
Activity: Lecture
1 Course Unit

ECON 272 China: Inst & the Econ
The rise of China since its economic reform starting from 1978 is one of the most important developments the world witnessed in the twenty first century. In this seminar course, we explore topics including the political logic of China's economic reform, the institutional foundations of the Chinese economic growth miracle, as well as detailed analysis of Chinese financial markets, housing markets, fiscal reform, corruption/anti-corruption, labor market transitions, China's integration into the world economy, village democracy and its impact on resource allocation, the impact of population ageing, the impact of China on US economy and politics, among others. The discussions will focus on China, but will relate broadly to emerging and developed economies. The course will be based on reading and discussing research articles and books selected by the instructors.
Also Offered As: PSCI 227
Prerequisites: ECON 101; MATH 104, 114 or MATH 115. ECON 103 recommended. PSCI majors PSCI 110 recommended.
Activity: Lecture
1 Course Unit
ECON 300 Honors Seminar
Students prepare an honors thesis in economics over the academic year, supervised by a faculty member of their choice. In both semesters students present their work in progress to the class. Any student intending to do empirical work in the thesis should have completed ECON 103 and ECON 104.
Two terms, student must enter first term.
Prerequisites: ECON 101, 102, 103, 104, and two 200-level courses; MATH 104, 114, GPA of at least 3.5 in Economics and permission of the instructor.
Activity: Seminar
1 Course Unit
Notes: Course meets weekly. Required of all honors majors.

ECON 681 Microeconomic Theory
Basic tools of microeconomic theory: consumer choice, firm behavior, partial and general equilibrium theory. This is a more theoretical treatment of the basic tools of microeconomic analysis than ECON 680.
Course usually offered in fall term
Prerequisites: Equivalent of ECON 101; meeting the department's minimal mathematical requirements; or permission of instructor.
Activity: Lecture
1 Course Unit

ECON 682 Game Theory and Applications.
A graduate level introduction to decision making under uncertainty, applied game theory, and information economics.
Course usually offered in spring term
Prerequisites: ECON 680 or 681.
Activity: Lecture
1 Course Unit

ECON 701 Microeconomic Theory I
Nonlinear programming, theory of the consumer and producer, general equilibrium.
Course usually offered in fall term
Prerequisites: Meeting the Department’s minimal mathematical requirements; ECON 897 Summer Math Program.
Activity: Lecture
1 Course Unit

ECON 702 Macroeconomic Theory I
Dynamic programming, search theory, neoclassical growth theory, asset pricing, business cycles.
Course usually offered in spring term
Prerequisites: Meeting the Department’s minimal mathematical requirements; ECON 700, 701, 703, 897 Summer Math Program.
Activity: Lecture
1 Course Unit

ECON 703 Microeconomic Theory II
Game theory, decision making under uncertainty, information economics.
Course usually offered in fall term
Prerequisites: Meeting the department's minimal mathematical requirements, ECON 897 Summer Math Program
Activity: Lecture
1 Course Unit

ECON 704 Macroeconomic Theory II
Equilibrium notions in the growth model. Economics with distortions.
Incomplete markets: Overlapping generations.
Course usually offered in spring term
Prerequisites: Meeting the Department’s minimal mathematical requirements; ECON 700, 701, 703, 897 Summer Math Program.
Activity: Lecture
1 Course Unit

ECON 705 Econometrics I: Fundamentals
Violations of classical linear regression assumptions, nonlinear regression models (including logit, probit, etc.), diagnostic testing, distributed lag models, panel data models, identification, linear simultaneous-equations model.
Course usually offered in fall term
Prerequisites: Meeting the department's minimal mathematical requirements, ECON 897 Summer Math Program.
Activity: Lecture
1 Course Unit

ECON 706 Econometrics II: Methods & Models
Analysis in time and frequency domains, state space representations, Kalman filtering, conditional heteroskedasticity, nonlinear and nonparametric methods for time series, integration, co-integration, numerical and simulation techniques.
Course usually offered in spring term
Prerequisites: Meeting the department's minimal mathematical requirements; ECON 705, 897 Summer Math Program.
Activity: Lecture
1 Course Unit

ECON 708 The Economics of Agency, Information, and Incentives
This course studies the economics of adverse selection and moral hazard in strategic settings. The primary focus is on the agency relationship and the structure of agency contracts. Other settings include auctions, bilateral trading, and the internal organization of the firm.
One-term course offered either term
Prerequisites: Meeting the Department’s minimal mathematical requirements; ECON 898 or equivalents.
Activity: Lecture
0.5 Course Units

ECON 712 Topics in Advanced Economic Theory and Mathematical Economics
Topics and prerequisites announced each year.
One-term course offered either term
Activity: Lecture
0.5 Course Units

ECON 714 Quantitative Macroeconomic Theory
One-term course offered either term
Prerequisites: ECON 702, 704
Activity: Lecture
0.5 Course Units

ECON 719 Economic Theory
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 712
ECON 721 Econometrics III: Advanced Techniques of Cross-Section Econometrics
Qualitative response models, panel data, censoring, truncation, selection bias, errors in variables, latent variable models, survey design, advanced techniques of semiparametric estimation and inference in cross-sectional environments. Disequilibrium models. Methods of simulated moments.
One term course offered either term
Prerequisites: ECON 705 and 706.
Activity: Lecture
1 Course Unit

ECON 722 Econometrics IV: Advanced Techniques of Time-Series Econometrics
Consistency and asymptotic normality for m-estimator and for generalized moment estimators. Asymptotics for integrated and cointegrated time-series. Inference in presence of nuisance parameters identified only under the alternative: consistent moment tests, testing for threshold effects, testing for structural breaks. Estimation of stochastic differential equations from discrete observations: simulated method of moments, indirect inference. Discrete time GARCH models and their continuous limits.
One term course offered either term
Prerequisites: ECON 705 and 706.
Activity: Lecture
0.5 Course Units

ECON 729 Econometrics
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 721 and 722

ECON 739 International Economics
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 730 and 731

ECON 749 Monetary Economics
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 740, 741

ECON 750 Public Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and political models affecting economic variables.
One term course offered either term
Prerequisites: ECON 701, 703
Activity: Lecture
0.5 Course Units

ECON 751 Public Economics II
Expenditures: Alternative theories of public choice; transfers to the poor; transfers to special interests and rent seeking; social insurance; publicly provided private goods; public production and bureaucracy. Taxation: Tax incidence in partial and general equilibrium; excess burden analysis. Topics on tax incidence and efficiency: lifetime incidence and excess burden, dynamic incidence, the open economy. Normative theories of taxation: Optimal commodity and income taxation. The political economy of income taxation.
One term course offered either term
Prerequisites: ECON 701, 703
Activity: Lecture
0.5 Course Units

ECON 759 Political Economy
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 750, 751

ECON 769 Economic Development Workshop
Forum at which visiting speakers, Penn faculty, and graduate students present research ideas.
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 760, 761, 791

ECON 779 Comparative Economic Systems
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 770, 771

ECON 781 Empirical Methods for Industrial Organization
The goal of the course is to explore links between theory and data in order to identify and test implications of economic models. Reduced form and structural approaches will be used to study a variety of topics that include: Estimation of multiproduct cost functions; detection of collusion, multibank contact, and network externalities; asymmetric information: auctions and nonlinear pricing; price competition and product differentiation; and complementarities: innovation and organizational design.
One term course offered either term
Prerequisite: ECON 780
Activity: Lecture
1 Course Unit

ECON 789 Applied Microeconomics Workshop
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 780, 781
ECON 792 Economics of Labor I
Topics include: Theories of the supply and demand for labor, wage determination, wage differentials, labor market discrimination, unemployment, occupational choice and dynamics of specific labor markets, theory of matching, trade unions. The theory and empirics of human capital accumulation, intertemporal labor supply, search, intergenerational mobility of income and wealth, contracts and bargaining, efficiency wage models, principal/agent models, and signaling models.
One term course offered either term
Prerequisites: ECON 701, 703, 705, 706, 721
Activity: Lecture
1 Course Unit

ECON 793 Economics of Labor II
A continuation of ECON 792.
One term course offered either term
Prerequisites: ECON 721, 792
Activity: Lecture
0.5 Course Units

ECON 799 Empirical Microeconomics
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Related Courses: ECON 791, 792, 793

ECON 998 Individual Readings and Research
One term course offered either term
Activity: Independent Study
0.5 Course Units

ECON 999 Independent Study
One term course offered either term
Activity: Independent Study
1 Course Unit

Education (EDUC)

EDUC 202 Urban Education
Course usually offered in fall term
Also Offered As: URBS 202
Activity: Seminar
1 Course Unit

EDUC 235 Psychology of Women
Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.
One term course offered either term
Also Offered As: GSWS 235
Activity: Lecture
1 Course Unit

EDUC 240 Education in American Culture
This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of "education" as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 241 Educational Psychology
Current issues and research, applying psychological theory to educational practice. As such, this course will explore the fundamental themes in behavioral, developmental, and cognitive areas of psychology as they relate to education. Topics include: learning, motivation, growth and development, cognitive processes, intelligence tests, measurements, evaluations, etc.
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 250 Learning from Children
This course is about looking at elementary school classrooms and understanding children’s experiences of school from a variety of perspectives, and from a variety of theoretical and methodological lenses from which the student can interpret children’s educational experiences. This course is about developing the skills of observation, reflection, and analysis and to begin to examine some implications for curriculum, teaching and schooling. This course requires you to spend time in an elementary school classroom.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 323 Tutoring School: Theory and Practice
This course represents an opportunity for students to participate in academically-based community service involving tutoring in a West Phila. public school. This course will serve a need for those students who are already tutoring through the West Phila. Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.
Course usually offered in spring term
Also Offered As: URBS 323
Activity: Seminar
1 Course Unit
EDUC 326 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically based community service learning. Students will be studying early childhood development and learning while providing direct, one-on-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, student will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: (1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, (2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and (3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.
Taught by: Fantuzzo
Course usually offered in fall term
Also Offered As: URBS 326
Activity: Seminar
1 Course Unit

EDUC 345 Psychology of Personal Growth
Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.
One term course offered either term
Also Offered As: GWS 344
Activity: Lecture
1 Course Unit

EDUC 360 Human Development in Global Perspective
A life-span (infancy to adulthood) approach to development. Topics include: biological, physical, social and cognitive basis of development. Films and guest speakers are often included.
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 414 Children's Literature
Theoretical and practical aspects of the study of literature for children. Students develop both wide familiarity with children's books, and understanding of how children's literature fits into the elementary school curriculum.
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 417 Reading/Language Arts in the Elementary School
Second of a two-part course (see EDUC 317). The course focuses on the reading process, using literature in the reading curriculum, language and cultural differences in the classroom, and evaluating reading/language arts programs and progress. Students design and carry out reading lessons and units, conduct informal reading assessments, and participate in in-class seminars.
Course not offered every year
Prerequisites: EDUC 316, 317
Corequisites: EDUC 419, 420
Activity: Lecture
1 Course Unit
Notes: This course is open only to students officially admitted to the program for preparation of elementary school teachers.

EDUC 418 Teaching and Learning Mathematics in Elementary Schools
Students participating in this course will explore definitions of mathematics, theories of children's mathematical learning, and issues of reform in mathematics education through consideration of relevant content areas such as numeration, rational number operations, geometry, and probability and statistics.
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 421 Science in Elementary and Middle Schools
Course usually offered in spring term
Also Offered As: ENVS 421
Activity: Lecture
1 Course Unit

EDUC 501 Economics of Education in Developing Countries
This is a course on economics of education, a field within the subject of economics that draws upon many areas of economic specialization. The course focuses on developing countries and includes papers and case studies covering themes such as returns to investment in education, production, costs and financing of education, teacher labor markets, economic growth, education markets, and equity issues.
Taught by: Thapa
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 502 Citizen Sociolinguistics
In this course we will draw on the Internet and daily news (internet circulated, usually) to find "Citizen Sociolinguists" who speak with authority, while juxtaposing these media with the usual scholarly sources.
Taught by: Aymes
Course not offered every year
Activity: Seminar
1 Course Unit
EDUC 503 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lectures, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; microfinance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.
Taught by: Hall
Course usually offered in spring term
Also Offered As: ANTH 546, URBS 546
Activity: Seminar
1 Course Unit

EDUC 504 Contemporary Issues in Higher Education
An introduction to the central issues and management problems in contemporary American higher education.
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 505 Globalization & the University
The aim of this course is to help students understand the basic concept of globalization, how it impacts higher education in general, and how it shapes the global market for human capital and fosters private sector and for profit provision and diversifies modes of delivery of higher education. The seminars cover the nature of globalization and the way it affects the movement of people between economies to gain and apply skills and knowledge, the creation of branch campuses, the growth of transnational education and the importance of brands and information in the global higher education market.
Taught by: Ruby
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 506 Global Perspectives on Inequalities in Education
This course provides a conceptual framework for understanding various dimensions of inequality. Through course case studies, the course takes a global perspective to explore how conceptions of equality, equity, quality, and opportunity intersect with issues around race, class, and gender, and inform debates around educational policy and practice.
Taught by: Ghaffar-Kucher
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 508 MaKeR Studio
In this seminar, we will discuss and design projects related to the "maker movement" in education using various materials and technologies as we consider issues of access and diversity around making.
Taught by: Kafai
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 509 Merit and America
What constitutes merit? What should constitute merit? These questions are both philosophical and practical and are faced by every educator in some form. The notion of meritocracy has long been at the heart of varied discourses about the place of education in American society. Merit is most often understood as inhering in consistent and individual personality traits such as competency, intelligence, and diligence. And yet, every individual is embedded in complex social worlds that are culturally specific and historically contingent. Drawing on a broad array of disciplines and literatures, this seminar-style course challenges students to consider how ideas of merit and its measurement are shaped by American history, culture, and society, and to articulate their own views as they move toward their professional goals.
Taught by: Posecznich
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 510 Democratizing Higher Education Participation
The aim of this course is to examine how public policy has shaped and been shaped by higher education in different political and economic settings. Seminars will examine themes such as access and equity in higher education participation, the role of higher education in economic development and nation building, and how higher education can promote democracy and an enlightened citizenry.
Taught by: Ruby,A
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 511 Equality
‘All men (or all humans) are created equal’: What does this statement mean? What are we all equal in? What should we be equal in? Do we have equal potential, equal dignity, equal worth? Must we have equal resources, equal opportunities, equal status? In this class we will consider philosophical and political approaches to the idea of equality. The education system’s ability and commitment to respond to claims of equality will be discussed. Must we treat all children the same? Or each child differently? And if the latter, how does that constitute equality? Moreover, must we treat individuals or groups equally? Educational and philosophical answers to these questions will be the focus of this seminar.
Taught by: Ben-Porath
Course not offered every year
Activity: Seminar
1 Course Unit
EDUC 512 University-Community Partnerships
Ranging from civic engagement to economic development, institutions of higher education in the United States have long been involved in a variety of relationships with their local communities; in recent years, there has been increasing attention paid to the opportunities and challenges implicit in those relationships. In this Academically Based Community Service (ABCS) course, students will study and discuss the history, rationales, and manifestations of the partnerships that have developed. Through readings, faculty-and student-led discussions, guest lecturers, and policy-oriented projects, students will develop better understandings of the many topics surrounding university-community partnership activities. Among other themes we will consider institutional roles and relationships, service learning, community perspectives, policy issues, and evaluation.
Taught by: Grossman
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 513 Development of the Young Child (TLL)
This course will blend an explanatory and descriptive account of behavioral evolution over the yearly years of life. After a review of "grand" developmental theory and the major themes of child change (from images to representation; from dependence to independence; from instinctual to social beings), this course will survey the child's passage from infancy through the early school years. While the emphasis will be on the nature of the child—what she/he sees, feels, thinks, fantasizes, wants and loves—these realities will be understood in terms of developmental theory. At each stage, the course will review the development of cognition, personal identity, socialization, and morality in pluralistic contexts.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 514 Education in Developing Countries
In recent years the construct of "global development" has come under increasing scrutiny, leading some scholars and practitioners to wonder whether development remains a useful concept. In this course, we will actively engage in this debate through a survey of the development literature in the field of education. We will examine theoretical frameworks and historical perspectives that will allow us to develop a better understanding of what is meant by "development" as well as recognize how these concepts relate to basic educational planning and practice in various international contexts. The course will work from primary and secondary materials on theories, research, and applications used to promote global development and basic education. Some programs are carried out by multinational/bilateral agencies such as World Bank, Unicef, UNESCO, and USAID, while others are undertaken by intermediary organizations (such as NGOs and universities) and local organizations or individual specialists. Issues include a range of social, economic and political obstacles to the provision of quality education. The goal of this course is to improve your understanding of how different theories of education and development influence educational policy, priorities, and programs of international, national, and local institutions.
Taught by: Wagner/Ghaffar-Kucher
Course usually offered in fall term
Prerequisites: Prior graduate work in related areas recommended.
Activity: Lecture
1 Course Unit

EDUC 515 Field Seminar (Elementary & Secondary Education)
This seminar is designed to integrate student teaching fieldwork and university course work through reading, discussion, and reflection. Central to this course will be teacher research, an inquiry stance toward learning how to teach, and a social justice approach to education. Throughout the semester, we will be examining a range of issues through theoretical and practice-oriented lenses that will deepen our understanding of teaching and learning. Offered within the Teacher Education Program.
Course usually offered in fall term
Activity: Lecture
3 Course Units

EDUC 516 Teaching Writing in Multilingual Contexts
This course introduces participants to a range of theoretical and practical issues related to second language literacy development, with a particular emphasis on writing instruction. An intensive service learning project offers course participants the opportunity to work with developing writers in a bilingual community organization. The dual emphasis on theory and pedagogy is intended to create space for critical reflection on the characteristics, production, teaching, and assessment of written texts in bi/multilingual educational settings.
Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 517 Classroom Discourse and Interaction
In this course students will read research that investigates the role of classroom interaction in learning and human development. Students will also learn how to "do" discourse analysis using real classroom data. Students will practice and critique methods for analyzing classroom discourse data as teachers, with an aim of developing a critical awareness of our own language use and role in society.
Taught by: Rymer
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 518 Authority, Freedom, and Disciplinary Policies
The course concentrates on the nature and justification of discipline. In particular, we focus on how discipline becomes the expression of twin but conflicting premises of education: that children should be encouraged to develop their critical intellectual capacities and autonomous decision-making—read freedom; that these ends cannot be achieved without the direction and control of teachers—read authority. Students read classical works on freedom and authority (John Stuart Mill, Isaiah Berlin, Emile Durkheim, John Dewey, C.S.Lewis) as well as more contemporary ones. In class we look at video clips of different practices and discuss readings. Every student selects one type of disciplinary approach to study in detail, inclusive of on-site visits. The seminar paper covers the source and nature of the school's commitments, its theory of authority and freedom (implicit and explicit), illustrations of how commitments are expressed (including discipline practices), and the student's reflections.
Course not offered every year
Activity: Lecture
1 Course Unit
EDUC 519 The Evolution of Assessment: Classroom and Policy Uses
This course explores the evolution and diverse uses of assessment in four major areas: the historical roots of testing and the development of the achievement testing industry; the rising interest and exploration of alternative forms of assessment; how teachers employ a variety of assessments in their classrooms; and how policymakers use assessment for decision-making and accountability purposes.
Taught by: Supovitz
Course not offered every year
Prerequisites: Permission needed from department.
Activity: Lecture
1 Course Unit

EDUC 520 Literacy in Elementary/Middle Schools
In this course, the interconnections of language, literacy and culture are explored in order to build a knowledge base and understanding of how children learn to read and write. Emphasis will be on how to teach and develop literacy curriculum in the elementary grades, and on how close listening and observation of children in their classroom contexts, combined with a critical reading of research and theory, can inform teaching practices. A central tenet of this course is that the best teachers of reading and writing are themselves active and engaged readers and writers. An important goal is to combine an inquiry approach to teaching and learning with an inquiry approach to thinking about how we teach.
Offered within the Teacher Education Program.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 521 Science in Elementary/Middle Schools
The goal of this course is to prepare teachers to facilitate science learning in the elementary and middle school. Special emphasis is placed on striving for a balance between curricular goals; individual needs and interests; and the nature of science. Offered within the Teacher Education Program.
Taught by: Bergey
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 522 Psychology of the African-American
Using an Afro-centric philosophical understanding of the world, this course will focus on psychological issues related to African Americans, including the history of African American psychology, its application across the life span, and contemporary community issues.
Taught by: Stevenson
Course usually offered in spring term
Also Offered As: AFRC 522
Activity: Lecture
1 Course Unit

EDUC 523 Social Studies in the Elementary and Middle Schools
This course will focus on teaching and learning in the content area of social studies. Curricular and pedagogical theories and practices will be examined for their educational significance, meaningful integration of content areas, respect for students' cultures past and present, and contribution to social justice issues. Offered within the Teacher Education Program.
Two terms; student must enter first term.
Activity: Lecture
1 Course Unit

EDUC 524 Philosophical Aspects of Education Policy
This course, which is unofficially titled 'Justice goes to School' explores the philosophical or normative foundations of educational policy decisions. School choice, standards-based reform, civic education, children's and parents' rights, school finance reform - how do different arguments for these policies view the role of schools in society? What are their concept of the person, and their view of the educated person? We will consider arguments for and against a variety of contemporary educational policies. Students are encouraged, if they are interested, to bring to class educational policy decision that perplex or intrigue them.
Taught by: Ben-Porath
One term course offered either term
Activity: Seminar
1 Course Unit

EDUC 525 Fieldwork in Language in Education
Supervised fieldwork for individuals preparing to work with reading specialist/teachers in school settings.
Taught by: Waff
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 527 Approaches to Teaching English and Other Modern Languages
This course provides students with an introduction to theory and practice in second and foreign language teaching. Students will (a) develop an understanding of the history of language teaching practice and how such a perspective informs current day approaches, (b) explore the relationship between the context in which the language is learned and taught and classroom practice, and (c) develop an awareness of teaching principles central to a personal pedagogical approach and teaching philosophy.
Students should have a field site where they can observe, participate, and collect classroom data.
Taught by: Box/Wagner, S/Kozlova
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 528 TESOL Practice Teaching
Fieldwork course for TESOL students. This course focuses on reflective teaching practice, providing a space for students to combine theory and practice as they apply the theoretical constructs of TESOL coursework to their own language teaching. Students will become accurate and systematic observers of and thinkers about their own teaching methodology, in order to continue to develop into increasingly effective language teachers. The theme of a student-centered language classroom will be explored through scholarly literature, pedagogical techniques, and students' own classroom teaching. To participate in this course, a student must be teaching a language class for the majority of the semester.
Taught by: Pomerantz/Box
Course usually offered in fall term
Prerequisite: EDUC 527 & EDUC 537
Activity: Lecture
1 Course Unit
Notes: Permission needed from the department
EDUC 529 Organizational Learning and Education
This course is an exploration of the theory, research, and practice of how individuals learn within organizational contexts and how organizations themselves may learn, as well as the social, cultural, and organizational forces that influence this process.
Taught by: Supovitz
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 530 Community Based Mathematics
This course engages future teachers in identifying and leveraging mathematics learning opportunities that exist within communities. First, participants apply mathematics to authentic community-based problems. After exploring literature about the use of real-world contexts in mathematics instruction, participants apply what they learn to design curriculum. Offered within the Teacher Education Program.
Taught by: Remillard & Staff
Course not offered every year
Prerequisite: Admission to Secondary Education Math or Science
Activity: Seminar
1 Course Unit

EDUC 531 Mathematics in the Elementary and Middle Schools
Learning to teach mathematics in ways that foster mathematical understanding and enjoyment for every student requires that teachers draw on different kinds of knowledge, skills, and dispositions. In addition to developing an understanding of central mathematical ideas, learning to teach math involves learning about learners, the understandings and conceptions they hold, and the processes through which they learn. It also involves developing skill in constructing tasks that engage students in mathematical exploration, creating an environment that facilitates reasoning, and finding ways to analyze and learn from one’s own teaching. Offered within the Teacher Education Program.
Taught by: Remillard/Ebby
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 533 Forming and Reforming the Elementary Reading/Writing/Literacy Curriculum
Students explore the theory and practice of constructivist approaches to teaching reading/writing/talking across the curriculum. They read widely and discuss issues that are informed by theory and research in many fields of inquiry including children’s and adolescent literature, educational linguistics, cognitive psychology, curriculum, and anthropology and assessment. They write and share integrative journals; develop, teach and reflect upon holistic lessons; and complete an individual or group project of their own choosing.
Taught by: Campano
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 534 School-Community Counseling & Mental Health Partnerships
This course is designed to give students a theoretical framework for developing school-community partnerships for the delivery of mental health prevention and intervention services to children. The course will include examination of several practice programs developed from the theoretical framework to provide services to parents, children, and school staff, including pairs therapy for the development of relationship skills and understandings; a whole-class prevention program to build social-emotional and academic skills in elementary children; and a preventive intervention to build capacity in Head Start to engage parents facing adversities such as depression.
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 535 Literature for Children and Adolescents
Theoretical and practical aspects of the study of literature for children and adolescents. Students develop both wide familiarity with children’s/adolescents’ books and understanding of how literature can be used in elementary/middle/secondary school curricula. Students complete course projects that focus on literature in specific classroom, research, home, or professional contexts.
Taught by: Thomas
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 536 Indigenous Education and Language Revitalization
The course examines Indigenous education and language revitalization from an international perspective, considering questions like: What policies, ideologies, and discourses shape the history of Indigenous education? What roles do pan-Indigenous and international organizations play? What does decolonizing and Indigenous schooling look like? How do Indigenous epistemologies, ways of knowing, being and relating influence education? What does culturally relevant schooling mean in Indigenous contexts? What are the roles of Indigenous communities in language revitalization and educational processes?
Taught by: Homberger,N
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 537 Educational Linguistics
For students with little or no linguistics background. An introduction to the basic levels of language (phonetics and phonology, morphology and semantics, syntax, pragmatics) with special emphasis on the relevance of linguistic concepts to education. Other topics may include bi/multilingualism, language variation, and language acquisition.
Taught by: Butler/Moore/Hondo/Paninos
Course usually offered in fall term
Prerequisite: Butler/Moore/Matsumoto
Activity: Lecture
1 Course Unit
EDUC 539 Teaching Performance Art for Cross-Cultural Education
This class examines issues related to cultural communities and the arts, specifically performance, writing and storytelling as an educational tool for generating cross cultural and intercultural understanding, dialogue and exchange. Assignments will focus on, cross-cultural research and dialogue, and skill building in teaching, writing and performance. Students will also develop an understanding of how performance can be used to enhance classroom activities in elementary/middle/secondary/ post secondary classroom curricula. Course usually offered in fall term Activity: Lecture 1 Course Unit

EDUC 540 Teaching Diverse Learners
This course engages student teachers working with diverse learners, presenting factual information about specific areas of need situated within a socio-cultural framework. It addresses content related to both special education and English language learners in four areas: (1) Introduction to Special Education; (2) Learning Categories; (3) Issues in Special Education; and (4) Working with English Language Learners. Offered within the Teacher Education Program Taught by: Watts, Bialka, Kinney Grossman Two terms. student must enter first term. Prerequisites: Permission needed from department. Activity: Seminar 1 Course Unit

EDUC 541 Access & Choice in American Higher Education
College enrollment is a complex process that is shaped by the economic, social and policy context, higher education institutions, K-12 schools, families, and students. The course will examine the theoretical perspectives that are used to understand college access and choice processes. The implications of various policies and practices for college access and choice will also be explored, with particular attention to the effects of these policies for underrepresented groups. As an Academically Based Community Service (ABCS) course, this course is also designed to generate tangible recommendations that program administrators and institutional leaders may be used to improve college access and choice. Taught by: Perna Course not offered every year Activity: Lecture 1 Course Unit

EDUC 543 Understanding Minority Serving Institutions
Students taking this course will learn about the historical context of HBCUs in educating African Americans, and how their role has changed since the mid-1800’s. Specific contemporary challenges and successes related to HBCUs will be covered and relate to control, and enrollment, accreditation, funding, degree completion, and outreach/retention programming. Students will become familiar with MBCUs in their own right, as well as in comparison to other postsecondary institutions. Taught by: Gasman Course usually offered in spring term Also Offered As: AFRC 545 Activity: Seminar 1 Course Unit

EDUC 544 School and Society in America
This course reviews the major empirical and theoretical research from the social history, and social theory on the development, organization and governance of American education, and the relationship between schooling and the principal institutions and social structures of American society. Taught by: Puckett/Staff Course offered summer, fall and spring terms Activity: Lecture 1 Course Unit

EDUC 546 Sociolinguistics in Education
The educational consequences of linguistic and cultural diversity. A broad overview of sociolinguistics, introducing both early foundational work and current issues in the field. Topics include language contact and language prestige, multilingualism and language ecology, regional and stylistic variation, verbal repertoire and communicative competence, language and social identity, codeswitching and diglossia, language socialization and language ideology, as they relate to educational policy and practice in the United States and around the world. Taught by: Flores/Moore One-term course offered either term Activity: Lecture 1 Course Unit

EDUC 547 Anthropology and Education
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies. Taught by: Hall or Posecznich Course offered summer, fall and spring terms Also Offered As: ANTH 547, URBS 547 Activity: Lecture 1 Course Unit

EDUC 548 American Education Reform: History, Policy, Practice
An examination of major trends, central tendencies, and turning points in American education reform, giving particular attention to contemporary developments such as accountability laws and school choice. This historical development of the federal role in American schooling is also considered, as is the history of school desegregation. What is the purpose of “school”? How have schools evolved across time, and how have Americans tried to change them? And what can we learn from this long history of reform? Taught by: Zimmerman/Puckett Course usually offered in fall term Activity: Lecture 1 Course Unit
EDUC 549 Writing and Culture
In this class we will look at writing as an expressive and instrumental part of culture and society. We see writing as cultural artifact and cultural behavior, shaped by and shaping the context of its use. This approach to writing is the foundation for the new literacy studies, which understands writing as several variable, multiple, diverse and changing practices contingent upon specific cultural and social contexts. Readings for the course are drawn primarily from the New Literacy Studies, but also from philosophy, anthropology, folklore, literary theory, literature and linguistics. We will consider ways these approaches to understanding and describing writing can inform classroom practice.
Taught by: Camitta
Course usually offered summer term only
Activity: Lecture
1 Course Unit

EDUC 550 Educational and Social Entrepreneurship
This course provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 551 Outside the School Box: History, Policy and Alternatives
This course explores historical and contemporary challenges involved in the policy and practice of non-school education agencies and factors that work in service to local school/community settings. Students will explore several historical case studies, conceptual frames, and current policy challenges, culminating in a community-based research project.
Taught by: Johanek
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 552 Video Games and Virtual Worlds as Sites for Learning
Drawing on work from the education, psychology, communication, and the growing field of games studies, we will examine the history of video games, research on game play and players, review how researchers from different disciplines have conceptualized and investigated learning in playing and designing games, and what we know about possible outcomes. We will also address issues of gender, race and violence that have been prominent in discussions about the impact of games.
Taught by: Kafai
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 553 Foundations of Education for Diverse Learners
An introduction to Special Education including the history, the legal regulation of Special Education, and an examination of critical issues.
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 554 Teaching & Learning in Urban Contexts
This course marks the beginnings of your year-long inquiry as preservice teachers, and hopefully your career-long inquiry as committed educational professionals, into the challenges of and opportunities for teaching and learning in urban settings. The theories and practices explored in this course are offered as foundations for instructional approaches that are intentional, reflective, inquiry-based, and learner-centered. As we investigate multiple dimensions of teaching and learning (curriculum design, learning theories, instructional techniques, etc.), you will have opportunities to both clarify and challenge the assumptions, beliefs, hopes, fears, and goals that you bring to your preparation to teach in urban secondary schools. Offered within the Teacher Education Program.
Course usually offered summer term only
Activity: Lecture
1 Course Unit

EDUC 555 Advanced Field Seminar (Elementary & Secondary Education)
This course focuses on praxis—the mutually supporting roles of theory and practice that bring rigor and relevance to the work of educational professionals. This course is designed to give student teachers opportunities to develop pedagogical orientations, to learn from “problems of practice” at placement sites, and to enrich student teachers’ theoretical and practical knowledge. All of these experiences will inform the master’s portfolio and will prepare teachers to continue to see themselves and their practice as continuing sites for research.
Offered within the Teacher Education Program.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 556 Higher Education Finance
Designed for non-financial managers, this course provides students with an introduction to basic concepts related to the finance of higher education. It examines the forces that influence the financing of higher education at both the state and federal levels. It addresses both the macro-economic and micro-economic issues related to higher education finance. In addition, students will be introduced to issues related to institutional finance.
Taught by: Finney
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 557 Developmental Theories: Applications with Adolescents
Focuses on theories of adolescent development and the nature of transactions among adolescents, peers, teachers, specialists, and significant others. Also covers methods of intervening to promote psychological growth.
Taught by: Nakkula
Course usually offered in fall term
Activity: Lecture
1 Course Unit
EDUC 558 Developmental Theories: Applications with Young Adults
This course is designed as a collaborative inquiry toward constructing and elaborating upon theories of young adult development and interactions with young adults as counselors, teachers, family members, and higher education administrators. Using a seminar or working group format, participants explore the relationships among developmental theory, sociocultural contexts of young adults, practice (e.g., interventions, relationships), and research. Using literature from empirical and popular, mainstream sources, participants will engage in learning of how young adults navigate the transition from adolescence to adulthood. Specific topics to be addressed include, "the quarterlife crisis," financial needs of young adults, relationships, family, and career exploration and crystallization.
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 559 Sociology of Education
This course provides an overview of key theoretical perspectives and topics in the sociology of education, including expansion of formal educational systems; the extent to which educational systems contribute to or inhibit social mobility; inequality of educational inputs and outcomes by race, social class, and gender; and the social organization of educational institutions, including sources of authority, community, and alienation. The course includes both K-12 and higher education topics.
Taught by: Ingersoll
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 560 Human Development
Provides an introduction to physical, social, cognitive, emotional and linguistic development from infancy to adulthood. Major theories related to human development will be discussed along with methods of intervention for individuals in various life stages.
Taught by: Fegley/Frye
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 561 Adolescent Development
An interdisciplinary view will be used to frame biological, psychological, and social development among adolescents. Special emphasis will be placed on how contextual factors influence developmental outcomes. Theories of adolescent development and methods of intervention will also be discussed.
Taught by: Fegley
Activity: Lecture
1 Course Unit

EDUC 562 Personality & Social Development
The effects of social processes on human development in the interlocking contexts of parents, family, peers, school, communities and culture are considered during the major developmental periods of infancy, childhood, adolescence and adulthood. The course examines what is unique about social developments, how social relationships can be defined, and what are the social precursors and consequences of specific developmental changes.
Taught by: Chen
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 563 TESOL Seminar
A weekly seminar that seeks to consolidate, broaden, and deepen knowledge of the main themes, trends, issues, and practices in the field of TESOL. Students will demonstrate their ability to observe, analyze, and reflect upon their teaching as they make connections between theory and practice, all critical skills for ongoing professional development which relate to the students' final project, a reflective-analytical or action research paper. The project is based on a thirty-hour teaching internship completed during the semester in which the students are enrolled in EDUC 563. The project is individually designed and subject to the instructor's approval. All students in the M.S.Ed./TESOL and Language & Literacy must submit a proposal for the internship in the semester before they take the Seminar.
Taught by: Wagner,S/Box/Kozlova
One-term course offered either term
Prerequisite: EDUC 528
Activity: Seminar
1 Course Unit
Notes: Permission needed from the department

EDUC 564 Ethics & Schools
This course explores the ethical elements of the work of schooling by examining ethical dilemmas faced by teachers, administrators, and policy makers. This course also explores how ethics should be taught in schools (and if it should be taught at all). The course raises and engages with the following questions: How can educators approach ethical dilemmas in their everyday work? How might an educator respond when she believes school-based policies and procedures are not in a student's best interest? How might an educator balance responses to particular events with system’s level transformation? Should policy makers pander to upper-middle class parents to attract them to urban districts? How can individual teachers and entire schools teach ethics?
Taught by: BEN-PORATH,S
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 565 Contemporary Issues in Community Psychology
This course focuses on three related issues. The history and evolution of community psychology within the political, economic and scientific context is the first issue. Second, students examine the discipline’s distinction between community mental health and community psychology. Third, students examine the implications of disease prevention and health promotion for the discipline’s current status and future development.
Course not offered every year
Prerequisite: EDUC 686
Activity: Lecture
1 Course Unit

EDUC 566 Cross Cultural Awareness
This course provides students experiential and cognitive awareness through affective exercises and readings. It explores issues of living in a diverse society through a variety of educational strategies including workshops, small group process, guest lectures, etc. It represents the seminar portion of P.A.C.E. (Programs for Awareness in Cultural Education): An "Educatng the Peer Educator" Program.
Course usually offered in spring term
Activity Lecture
1 Course Unit
EDUC 567 Internship: ICC
All students in the MS/ICC program must complete a supervised internship of at least 160 hours prior to enrolling in this course. The supervised internship is individually designed and is subject to approval; students must submit a Prospectus describing the internship in the Fall or Spring semester prior to beginning the internship. This course offers guidance as students complete the portfolio or reflective paper, which is based on the experience and data collected during the internship. Through this course, students in the M.S.Ed./ICC program will discuss ways to conceptualize the internship experience, situate it meaningfully within the field of intercultural communication, locate and analyze relevant research literature, and prepare the portfolio or reflective paper, with an overall goal of developing the ability to communicate clearly and effectively for an academic and/or professional audience.
Taught by: Moore/Pomerantz
Course usually offered in spring term
Prerequisites: Eight or more courses toward M.S.Ed. degree in Intercultural Communication. Permission needed from department.
Activity: Seminar
1 Course Unit

EDUC 568 Cognitive Development
This course examines the cognitive development of the child from infancy to adolescence with an emphasis on cultural context. Topics include: origins of thinking, Piaget, Vygotsky, intelligence, development of learning and memory, language development, and moral development.
Taught by: Frye
Course usually offered in fall term
Prerequisite: EDUC 560 or equivalent
Activity: Lecture
1 Course Unit

EDUC 569 Administration of Student Life
This course covers a variety of issues in the management of student services on campus. After examining the historical context of student affairs and the theoretical frameworks of student development, students explore ways to most effectively administer the numerous activities that comprise student affairs programs.
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 570 Education and the American Metropolis
Education and the American City centers on major trends and factors that have shaped cities and their preK-16 school systems since the Second World War, including racial discrimination, migration and immigration, suburbanization, deindustrialization, U.S. housing policy, social welfare policy, and urban renewal.
Taught by: Puckett
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 572 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings.
Taught by: Pomerantz
Course not offered every year
Also Offered As: GSWS 572
Activity: Lecture
1 Course Unit

EDUC 573 Higher Education Policy: What Can We Learn from Other Countries?
This course examines the proposition that policy makers, educational leaders and practitioners can learn from what has worked and failed in higher education policy and practice in other nations.
Taught by: Ruby/Eynon
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 574 Race/Ethnicity in Human Development
This interdisciplinary course will employ a critical perspective on minority youth development, analyze the existing literature, and propose alternative explanations for observed phenomena. It will consider pertinent issues and theories of middle childhood, adolescent and young adult development.
Course not offered every year
Also Offered As: AFRC 575
Activity: Seminar
1 Course Unit

EDUC 575 Topics in Psychology in Education: Qualitative Studies of Developmental Interventions
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.
Course not offered every year
Also Offered As: GSWS 429
Activity: Seminar
1 Course Unit

EDUC 576 The Social & Political Philosophy of Education
Is the purpose of education to allow individuals to better themselves by pursuing personal tastes and interests, or should education be primarily aimed at creating good citizens or good members of a group? Is there a way of reconciling these two aims? Assuming that adult relations with children are inherently paternalistic, is it possible for children to be educated for future autonomy to pursue major life goals free from such paternalistic control; and if so, how? How much, if any control over education can be allocated to the state, even when this conflicts with the educational goals parents have for their children? Such questions are especially relevant in multicultural or pluralistic societies in which some groups within a liberal state are non-liberal. Should a liberal democratic state intervene in education to ensure the development of children's personal autonomy, or must tolerance of non-liberal groups prevail even at the expense of children's autonomy?
Taught by: Detlefsen, K.
Course not offered every year
Also Offered As: GSWS 249, PHIL 249
Activity: Lecture
1 Course Unit

EDUC 577 Selected Topics in Educational Linguistics
The focus for each semester will vary to reflect those issues most relevant to current concerns in educational linguistics.
One term course offered either term
Activity: Seminar
1 Course Unit
EDUC 578 Teaching Reading and Study in Colleges and Universities
This course is designed for both pre-service and experienced instructors and administrators who are interested in teaching and/or researching the concept of academic literacies and the array of academic skills in postsecondary settings, and/or directing programs in reading, writing, and study strategies at the postsecondary level. The course presents theoretical frameworks relevant to teaching study strategies, theories of cognitive development, and practical instructional methods. Emphasis is placed on the process and content of such instruction, materials and methods for teaching, and ways to organize postsecondary literacy programs.
Taught by: Cohen, M
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 579 Intercultural Communication and Miscommunication
An introduction to basic issues in intercultural communication, reviewing various perspectives on the nature of culture, communication, "miscommunication" and inter-cultural relations. The course criticizes two commonly held assumptions that "cultures" are unitary and unchanging and that inter-cultural contact and communication is inherently more troublesome then intra-cultural communication. The course considers ways in which intercultural communication has important consequences in education, medicine, social services, business settings, and international contact situations.
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 580 Developmental Theories & Applications with Children
The purpose of this course is to provide students with an opportunity to consider mandates, models, and methods related to enhancing the learning and development of preschool and early elementary school children. This course emphasizes the application of developmental psychology and multicultural perspectives to the design of effective classroom-based strategies. Students will consider a "whole-child" approach to understanding children's classroom behavior in context. Major assignments will involve gathering and synthesizing information about children in routine classroom situations. This information will be used to better understand children's needs and strengths and how they are manifested in transaction with classroom contexts. Students will focus on one or more students to conduct a comprehensive child study of the child in context. This contact must include opportunities to observe children in a natural setting and interact with them on a regular basis throughout the semester. The placement needs to be approved by the professor. If students do not have a regular classroom contact, one will be arranged.
Taught by: Fantuzzo
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 581 Advanced Psychology of Women: Counseling Issues for Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women's mental health, issues of diversity, sexuality, and relationships for women will be addressed.
Also Offered As: GSWS 581
Prerequisites: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor.
Activity: Lecture
1 Course Unit

EDUC 582 Theories and Pedagogies of Teaching Writing
This seminar examines various theories and pedagogies of teaching writing in multilingual, multimodal contexts. It explores the historical and ideological underpinnings of contemporary theories of writing and attends to how writing, and the teaching of writing, is shifting in a mobile, networked, and global age.
Taught by: Stornaiolo
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 583 Content-Based Instruction
This course offers students opportunities to investigate, observe, design practice, and critically evaluate the integration of content and language teaching - Content Based Instruction. The settings investigated include thematic English Language teaching; co-teaching and peer coaching by ESL and content teacher teams; and sheltered content instruction, among others. Standards, integrations of tasks, and special language requirements in various content areas are reviewed.
Taught by: Box
Course usually offered summer term only
Activity: Lecture
1 Course Unit

EDUC 584 Basic Counseling Skills
This course will teach basic counseling skills to students not seeking a license in professional counseling as a way to help them connect with and work well with others. It will predominantly be oriented towards skill building. We will review/discuss a selection of basic counseling skills and use in-class demonstrations to practice these skills. This course is required for the Counseling and Human Development Skills Concentration.
Taught by: Schultz, Kyle
Course usually offered in spring term
Activity: Seminar
1 Course Unit
EDUC 585 Advanced Group and Family Counseling
This course focuses on the basics of systems intervention with a specific focus on families and groups. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to advanced group therapy strategies with children, youth, and adults, with family interventions across various mental health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some advanced and demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. This course will satisfy the Group work II requirement of the MPE program in Professional Counseling and Psychology. The course also fits within the APH-D theme of Applied Psychology: Intervention and Certification.
Taught by: Lapp
Prerequisites: Students must be enrolled in the M.PhiEd. in Professional Counseling Program.
Activity: Lecture
1 Course Unit

EDUC 586 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/video as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Taught by: Hall,Kathleen & Das,Amit
Two terms. student must enter first term.
Also Offered As: ANTH 583
Activity: Seminar
1 Course Unit

EDUC 587 Human Sexuality
All persons have moments that elicit reflection on issues related to myriad aspects of sexuality. When working with people in clinical or school settings, these issues are ubiquitous. This course will provide a broad understanding of sexuality and specific ways to address sexuality problems.
Taught by: Schultz,Kyle
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 588 Digital Literacies in a Networked World
This graduate seminar is designed to explore how literacy and learning are changing as people participate with digital technologies across intersecting local and global networks. Participants will collaboratively investigate how young people’s digital literacies—cultural and socially situated meaning making practices mediated by digital tools—emerge in relation to constantly shifting technologies of communication and are constructed, reconstructed, negotiated, and embodied in multiple semiotic systems across everyday contexts. This course highlights how digital literacies are situated, and how these socio-cultural understandings illuminate issues of power and privilege.
Taught by: Stornaiolo, A
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 589 Teaching and Learning in the Global Era
We are living in an era in which economic, social, cultural, environmental and technological transformations are connecting people across the globe in new and unprecedented ways. Given that our world is increasingly interconnected, it is no longer adequate to prepare students to succeed simply as citizens of a particular nation. Students also must acquire the knowledge, skills, dispositions, understanding and aptitude to engage with people from different regions in the world who may hold varying or conflicting perspectives, forms of knowledge, and ways of knowing that are culturally and historically specific and informed. This course will focus on issues related to teaching and learning in the 21st century, and to preparing young people for global citizenship. We will consider what it means to be a global citizen as well as the various approaches to educating for global citizenship that have emerged in the U.S. and around the world. We will also explore instructional and curricular innovations that aim to enrich how young people learn about world regions and cultural traditions, engage with global issues and come to respect contrasting perspectives.
Taught by: Hall
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 590 Gender & Education
This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.
Course not offered every year
Also Offered As: GSWS 590
Activity: Lecture
1 Course Unit
EDUC 591 Applied Research Methods to Inform Policy and Practice
The class is designed to provide students with the knowledge and tools
to define relevant research questions to guide program design and
operations, as well as to guide policy development; to map questions
to appropriate methods of research; to judge the quality of research
evidence; and to design strong analysis and evaluation strategies for
various purposes. The primary, but not exclusive, focus of the course is
on education policy concerns.
Taught by: Maynard
Course usually offered in fall term
Prerequisites: Permission needed from department
Activity: Lecture
1 Course Unit

EDUC 592 Professional Development in Higher Education
To prepare for a career in higher education, students are engaged in a
20-hour a week assistantship in the field. This course complements and
enhances the graduate assistantship. Emphasizing practical application
of theory and skill development, the course does the following: provides
students with tools to embark on a successful job search; offers
networking opportunities with administrators in higher education; and
introduces students to relevant and timely literature and resources in
higher education professional development.
Taught by: Aikins
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 593 Experiential Learning Design for Intercultural Communication
Provides new and experienced educators the opportunity to learn
and practice training design and facilitation using the principles of
experiential and adult learning.
Course usually offered in spring term
Prerequisite: EDUC676 or permission from the instructor
Activity: Lecture
1 Course Unit

EDUC 594 Diversity in Higher Education
This course explores issues of diversity as they pertain to higher
education, including race, ethnicity, gender, class, religion, sexual
orientation, ideology, etc. Rather than focusing on specific populations
of people, the course will tackle issues of diversity within the context of
crucial higher education functions and problems.
Taught by: Tiao/Staff
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 595 Politics and Education
How is education a form of political action? In this course we look at
the governance of schools, the trust in them and their relations to socio-
economic conditions in society, among other topics, using research in
education, political science, and political theory.
Taught by: BEN-PORATH
Course usually offered in fall term
Also Offered As: PSCI 545
Activity: Seminar
1 Course Unit

EDUC 596 International Early Childhood Policies and Programs
This course focuses on early childhood development research, policies,
and practices in low and middle income countries. The first part of
the course reviews the evidence for investing in young children from
economic, health, and education perspectives. The second part of the
course discusses current issues related to designing, implementing, and
evaluating quality, contextually-appropriate early childhood interventions.
Taught by: Neuman
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 597 Policy Planning in International Educational Development:
Theory and Practice
This course focuses on education policy in low and middle-income
countries. The first part examines global policy frameworks and
international institutions/actors that shape education reform efforts.
The second part covers the contexts, processes, and tools for national
education policy planning. The third part analyzes a series of current
cross-national education policy issues.
Taught by: Neuman
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 598 Interfaith Dialogue in Action
This ABCS course explores religious pluralism and interfaith dialogue
and action on college campuses. It brings together students with diverse
faith commitments (including atheism) to engage with and learn from
one another in academic study, dialogue, and service.
Taught by: Hal/Kocher
Course usually offered in spring term
Activity: Seminar
1 Course Unit
EDUC 599 History of American Education
This course will examine the growth and development of American schools, from the birth of the republic to the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of “America” itself? In an irrevocably diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed violently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blearily believed that newcomers would abandon their old-world habits and tongues; today, “multicultural education” seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but blacks themselves demanded a more academic education, which
Taught by: Zimmerman
Course usually offered in spring term
Also Offered As: HIST 463
Activity: Seminar
1 Course Unit

EDUC 601 Economic Aspects of Educational Policy
This course has two main goals. One is to teach students to apply economic principals to analyze a wide range of educational policy issues. The other is to provide students with a foundation in contemporary education policy issues. The course is designed to address analytic issues relevant to a wide range of educational professionals, including managers, policy makers, and evaluators. The course will be divided into five units: (1) principles of economic analysis in the context of education policy; (2) the economy of early care and education; (3) cost-effectiveness analysis; (4) human capital investment; and (5) education finance.
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 602 Youth Cultural Fomations
This course explores anthropological perspectives on peer-based youth cultures. It explores how educational institutions, media (fashion, music, magazines), and states shape youth cultures in cross-cultural contexts through social processes such as capitalism, nationalism, and increasing globalization. The course emphasizes ethnographies and histories which explore the relationship of these wider social processes to the lived realities of young people, situated in class, gender, national and race-specific contexts.
Taught by: Strong
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 603 Wellness and Addictions Counseling
This course will provide an overview of addictions and addiction counseling from research, theory, and applied perspectives. It will also explore contemporary conceptions of “wellness” and wellness-promotion strategies, particularly for people struggling with addictions. Applied skills for addressing wellness and addiction will be framed within current evidence-based research.
Course usually offered in fall term
Prerequisites: Students must be enrolled in the M.Ps.Ed. in Professional Counseling Program.
Activity: Lecture
1 Course Unit

EDUC 604 Ethics and Leadership in Higher Education
This course looks critically at the various theories of leadership with a special emphasis on the ethical dimensions of leadership. Initial classes are devoted to common ethical frameworks from Plato and moving through Kant, Hume and into the present practical application of ethics to leadership. Leadership theory and practice reveal that there is no one approach that is best or that works in all situations. Aspiring leaders must have a variety of lenses through which they can analyze and understand the elements involved in ethical leadership. At the end of the course students will be able to apply essential concepts of ethical decision making and leadership - the role of trust and the ability to build trust, the uses of power, the importance of good decision-making, the conflicting priorities that arise from living out your core values in the workplace.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 607 Faculty and Academic Governance
Introduction to selected issues pertaining to faculty and academic governance, such as: Who governs American colleges and universities? What are the respective roles of the president, the board of trustees, the faculty, and students in institutional decision making? The course will also explore key contemporary governance issues.
Taught by: Hartley/Garland/Eckel
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 608 Organizational Change in Higher Education
Colleges and universities today face tremendous challenges—calls by external constituents for greater accountability, scarcity of resources, greater competition, and pedagogical innovations. The need for change, and for change agents, in our institutions of higher learning has never been greater. This course examines organizational change both theoretically and practically in college and university settings. Students will be introduced to many of the most current, influential, and promising theories about how change occurs at the departmental, institutional and system level. Using case studies, we will apply these frameworks in order to diagnose and develop constructive strategies for meaningful change.
Taught by: Hartley
Course not offered every year
Activity: Lecture
1 Course Unit
EDUC 609 Counseling for Educators
The purpose of this course is to help professional educators develop an understanding of the major issues involved in trying to help others. To accomplish this, it examines various counseling theories and explores their relevance for working with students and parents as they confront normal issues of learning and development. Through observation, skill building, and practice in natural settings, students will have the opportunity to develop their own grounded theory of helping.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 610 Cultural Perspectives on Human Development
This course focuses on children's and adolescents' development from cultural and cross-cultural perspectives. Topics include traditional and recent theories of cultural influence on development, research strategies, socialization values and practices, and socioemotional and cognitive functions such as aggression and conflict, shyness, and academic achievement in cultural context. Issues involving ethnicity and social and cultural changes are also discussed.
Taught by: Chen
Activity: Lecture
1 Course Unit

EDUC 611 Education, Development, and Globalization
This course will explore contemporary issues in international education. The emphasis will be on exploring an emergent body of literature on contemporary processes of globalization in the field of education. The course has a double goal: 1) to provide theoretical frameworks and historical perspectives in order to develop an adequate understanding of 'globalization', and 2) to explore the relevance and impact of globalization as a framework for understanding educational processes in comparative and international contexts.
Taught by: Ghaffar-Kucher
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 612 LGBT Counseling & Development
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding the interactional processes facing LGBT individuals.
Course not offered every year
Also Offered As: GSWS 612
Activity: Lecture
1 Course Unit

EDUC 613 Group Counseling
Through didactic and experimental learning activities, students will explore various theoretical approaches to groups, learn and apply principles of group dynamics, develop familiarity with ethical, legal and professional standards relative to group leadership, learn member roles and functions in group, examine group counseling in a multicultural context, and relate these issues to the leader's interpersonal style and behavior. Applications to specific developmental stages and contexts will be explored.
Activity: Lecture
1 Course Unit

EDUC 614 Child Development and Social Policy
The purpose of this course is to focus on major US social policies impacting our most vulnerable subpopulations of children living in poverty. The class will explore how developmental science can provide a broad conceptual framework to inform the construction of social policies for children and evaluate their effectiveness. Since much of the social policy issues for children in the US public square are currently hotly debated, the class format will incorporate debate and require students to actively research and defend positions on existing policies. Class size will be set at a level to maximize interaction and involvement.
Taught by: Fantuzzo
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 615 Parenting and Children's Educational Development
Theory and research on family influences on achievement development, models of the home-learning environment; parental involvement in schools.
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 616 Master's Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international.
Taught by: Baker
Course usually offered in fall term
Prerequisites: Permission needed from department.
Activity: Lecture
1 Course Unit

EDUC 617 Counseling for School to Career Transitions
This psychology course will focus on the developmental and emotional changes that coincide with adolescents' conceptions of work and work-related activities. As a course in career psychology, students will be exposed to readings from multiple disciplinary perspectives and will be expected to learn how to work with youth as they struggle through decisions on career and moving beyond the safety of childhood and adolescence. In addition, students will learn about the family-youth and school-student relational dynamics and that occur simultaneous to the adolescent's development of a work ethic.
Taught by: Nakkula
Course usually offered in spring term
Activity: Lecture
1 Course Unit
EDUC 618 Leadership in Educational Institutions
In this course class members will simultaneously engage in an academic study of educational leadership focusing on Pre-K-12 schools and school districts, and in a continuing leadership development laboratory experience designed to increase one's personal efficacy as leader. A basic assumption for the course is that leadership is a central component of schooling; teaching is considered as foremost a leadership activity, whether with five year olds or high school seniors, and successful schools and districts are assumed to have capable leaders. The course will give particular attention to the recent shift in role expectations for school leaders - from competent manager to accountable instructional leader - and what this shift means in relation to the day-to-day work of educational leaders.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 619 College Student Health
College Student Health explores postsecondary student health issues from historical and research perspectives, including stress, sleep, sexual health and safety, alcohol and other drugs, and mental health and wellness, among other topics. This course surveys the roles, responsibilities, and best practices of campus health professionals.
Taught by: Aikins
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 620 Enrollment Management
Enrollment management is an organizational concept of strategies for achieving institutional goals. The course provides an overview of multiple enrollment management models, the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks to institutions and their markets. This course is designed primarily for masters-level students.
Taught by: Kaplan/Staff
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 621 Proseminar in Professional Education
An integrative seminar that will provide an opportunity to reflect, orally and in writing, on the issues of quality, stability, and change in teaching, curriculum and school organization, toward the aim of fundamental reform in educational practice.
Taught by: Quinn
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 622 International Educational Development Program (IEDP) International Field Experience/Internship
Conceptual background on the role and utility of non-profit organizations in international educational development, combined with 6-8 weeks of field experience working in a developing country, or with an international organization that has programs in developing countries. The pre-fieldwork phase of the course seeks to acclimate students with the stages of a project cycle and will introduce students to tools and techniques employed by a variety of international development organizations. Students will work in small groups on a technical proposal throughout the semester. For the fieldwork phase, students are required to write multiple reports from the field.
Taught by: Ghaffer-Kucher
Course usually offered in spring term only
Prerequisites: Required of (and limited to) IEDP students in order to complete their Master's Degree.
Activity: Full Time Internship
1 Course Unit

EDUC 623 Childhood Interventions
The course addresses the following key questions: what is early childhood intervention? What was it, and what has it become? What are its historical roots in child development research, early childhood education, special education, and maternal and child health? However, while addressing earlier conceptual issues, this survey course also links these conceptualizations to contemporary developments in the field that are of special significance to educators.
Course not offered every year
Prerequisite: EDUC 560 Human Development
Activity: Lecture
1 Course Unit

EDUC 624 Gender in College
Examined in this course are theories and interdisciplinary perspectives pertaining to gender on college and university campuses. Emphasis is placed on the social construction of gender, gendered institutional norms and practices, gender disparities on college campuses, and the unique experiential realities of women, men, and transgender persons in a variety of roles and postsecondary educational contexts.
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 625 Data Processing and Analysis
Use of Statistical Software including Statistical Analysis (SAS) to effectively build a wide variety of datasets for use to address a range of empirical research questions. Evaluate conventional methods for dealing with missing data and apply contemporary methods using SAS.
Taught by: Rovine
Course usually offered in fall term
Prerequisite: Educ 667 or equivalent
Activity: Lecture
1 Course Unit

EDUC 626 Literacy, Discourse, and Interaction
This course draws on varying pedagogical and personal perspectives to explore conceptions of reading comprehension and how it can be taught to children and adolescents. Focus will be given to how certain ways of structuring dialogue about a text profoundly change how readers think about and do reading.
Taught by: Thomas
Activity: Lecture
1 Course Unit
EDUC 627 Teaching in the Middle and Secondary Schools
Content-specific sections of this course (math, social studies, science) will examine approaches in planning, implementing and evaluating methods for teaching science, mathematics and social studies in middle and secondary schools. This course is grounded in the belief that teaching and learning require educators to question our teaching purposes and practices through a process of self-reflection, collegial and student-teacher interactions as well as personal and professional growth. Using a variety of learning theories and perspectives as the foundation for interactive teaching strategies, the stories, questions and contradictions of each content area are examined from a variety of perspectives. Offered within the Teacher Education Program.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 628 Education Finance Policy
This course examines the legal, political and economic issues surrounding how public schools are funded, including equity, productivity and the interaction of finance and school reform. Through readings, discussion and written assignments, students will develop and apply policy analysis skills to the area of education finance.
One term course offered either term
Activity: Lecture
1 Course Unit

EDUC 629 Teaching English/Language and Literacy in Middle and Secondary Schools
This course is a collaborative inquiry into the dynamic concept of adolescent literacy and its potential as an organizing construct for improving teaching and learning. It provides opportunities to investigate a variety of resources including our own histories as well as a range of print, digital and visual texts and to conduct fieldwork in various middle and secondary school classrooms where youth are being positioned (and positioning themselves) as literacy learners and literacy is being defined, performed, practiced, interrogated, and interpreted, within and beyond the school curricula. By engaging with youth, in various texts and contexts and for a range of purposes, participants will try to make sense of how adolescents negotiate their worlds, in school and out. The approach to literacy is interdisciplinary, drawing from the domains of literature, composition, linguistics, curriculum theory, anthropology and psychology and from theory, research and practice of both university-based and school-based teachers, writers and researchers. The intent is to pose and refine questions about what it means to teach literacy in ways that take seriously what youth bring to school as their own knowledge and passions, cultural and linguistic resources.
Taught by: Stornaiuolo
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 631 Research Topics
This seminar offers students a collaborative setting in which to explore a topical area, craft a literature review and refine their research questions. The course will be of special interest to doctoral candidates who are drawn to an area of inquiry (e.g., presidential leadership, diversity, access, organizational change) but now wish to elicit from it a discrete "researchable" question.
Course not offered every year
Prerequisites: Permission needed from department.
Activity: Lecture
1 Course Unit

EDUC 633 Selected Topics in Reading/Writing
Examines a topic of current interest to theory, research, and practice in writing.
Course usually offered summer term only
Activity: Lecture
1 Course Unit

EDUC 634 Language Assessment
This course concerns a basic theoretical and practical foundation in language assessment, with particular emphasis on assessments used in second and foreign language education. The course covers various kinds of testing (both formal testing and performance-based assessment), theoretical and technical issues associated with test development, administration, the social influences of testing, and future directions in language assessment.
Taught by: Butler
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 635 Assessing Language and Learning Differences
This course exposes students to a wide variety of assessments used to look closely at growth in reading/writing/learning. Students critique both formal and informal approaches to assessment as well as complete structured observations of learners within diverse instructional contexts. Emphasis for include contextual and affective components of reading/language difficulties, innovative assessment procedures, observational strategies and collaborative inquiry.
Taught by: Gadsden/Campano
Course usually offered in spring term
Prerequisite: EDUC 553
Activity: Lecture
1 Course Unit
Notes: Auditors not permitted

EDUC 636 Young Adult Literature, Media & Culture
This course acquaints students with the ever-expanding body of literature written for young adults, considering the theoretical and pedagogical issues it raises. Readings include many young adult novels; empirical research on adolescent response to literature; and literary theory.
Taught by: Thomas
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 638 Principles of Monitoring & Evaluation in International Education Development
This course covers theories, methods, and applications of monitoring and evaluation for educational and social programs, with special emphasis on international education development. Topics include basic statistical concepts, program theory, process and outcome assessment, concepts in survey methods, introduction to causal inference, introductory regression analysis, and an overview of impact assessments and cost-benefit/cost-effectiveness analysis.
Taught by: Thapa
Course usually offered in fall term
Activity: Lecture
1 Course Unit
EDUC 639 Design of Learning Environments
This course examines different theoretical frames and strategies related to the study and design of learning environments in school, community and online contexts. Physical, social and cognitive aspects of learning situations are considered as students evaluate current research and applications in a variety of existing educational learning environments. Taught by: Yoon/Staff
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 640 History of American Higher Education
This interactive course focuses on the history of American higher education from the Colonial period through the current day. An emphasis is placed on underrepresented institutions and individuals. Students will have the opportunity to make connections between historical trends and movements and current issues. Taught by: Gasman
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 641 Language and the Professions
This course takes a micro-analytical perspective on interaction and language use in various institutional domains. Topics include doctor-patient interaction in diagnosis and treatment; trial examination and jury deliberations, as well as informal modes of conflict resolution; and news and political communications. Attention is focused on the interrelationships between interactional practices, institutional tasks and social identities. Students will be given opportunities to mutually engage in hands-on data analysis during the class. Taught by: Wagner
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 644 Technology-Mediated Teaching & Learning
Students in this course will critically evaluate the role of technology in education. Through a range of inquiry projects, research analysis and hands-on experience, students will examine the potential risks and benefits, as well as strategies of use for technology-mediated teaching and learning. Technologies considered will include: skill-building software, microworld software, visualization and modeling tools, internet search tools, media production tools, and collaboration technologies. Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 645 Issues in Education and Health: Disparities and Prevention in Schools and Communities
Drawing upon research and scholarship in health and education, this course aims to deepen our knowledge, understanding, and ability to effect positive change in the health and health practices of students and families in urban settings, using schools and community agencies as sites of engagement. Taught by: Gadsden
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 646 Contextualizing the School to Prison Pipeline: Implications of History, Policy, and Race
The term school-to-prison pipeline typically refers to a disturbing trend in which punitive policies have led to children being funneled out of schools and into the criminal justice system at an alarming rate. This course: 1) examines the historical context and policies that have contributed to the school-to-prison pipeline. Taught by: Harper
One-term course offered either term
Activity: Seminar
1 Course Unit

EDUC 650 Communication and Culture in Context
This course brings together scholarship in pragmatics, interactional sociolinguistics, and critical discourse analysis to help language teachers and intercultural educators foster pedagogies that respond to the complexities of living in a multilingual/multicultural society. Through a series of readings, small research projects, and activities, participants will develop a collection of educational practices that focus on 1) raising metalinguistic awareness, 2) developing resources and strategies for communicating across perceived social and cultural boundaries, and 3) assessing intercultural interactional competence. Taught by: Pomerantz
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 655 Ethnography for Intercultural Communication
This course is for practitioners and researchers engaging in and thinking about mentoring, supervision, and fieldwork in teacher education and counseling as well as in social work and other applied development fields. Taught by: Moore
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 656 College and University Teaching
In this class, students will learn how to systematically plan for a university course, develop a teaching philosophy, create a course syllabus relevant to their discipline and expertise, design and implement evaluation instruments to assess teaching and learning, experiment with a range of technologies to advance teaching, and participate in a teaching simulation. This course also incorporates issues of diversity with regard to teaching. Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 657 Advanced Methods in Middle & Secondary Education
Formal teaching and learning are on-going processes that require an examination of our practice and purpose through self-reflection, self-evaluation, collegial and student/teacher interaction, and personal and professional growth. This course is the second half of a content-specific secondary methods sequence that is geared toward teaching middle and high school English, math, science and social studies in an urban setting. Special focus will be on content, pedagogical strategies as well as specific skills and Pennsylvania and national standards. We will work together as teacher-researchers to combine theory with practice to increase our understanding and utilization of an inquiry based, multiple perspective, constructivist approach to teaching. Offered within the Teacher Education Program. Course usually offered in spring term
Activity: Lecture
1 Course Unit
EDUC 658 Diagnosis and Psychopathology
In this course, students will explore the etiology, course, and prevalence of psychological disorders of childhood and adolescence. Particular focus is on the role of these issues in the developing person within the context of family, school, and culture. Major clinical and empirical classification systems (DSMIV and the new DSM5) are examined, as well as some of the diagnostic and assessment strategies used to aid the conceptualization and treatment of these disorders.
Taught by: Richardson
Activity: Lecture
1 Course Unit

EDUC 660 Museum Education
Since the nineteenth century, museums have played a key role in the collection and dissemination of knowledge, and today their educational programs play a vital role for an array of communities. This seminar provides an introduction into museum education, the fields that influence it, pedagogical approaches used, and contemporary challenges.
Taught by: Aplenc
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 661 Language Diversity and Education
Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners’ bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools.
Taught by: Homberger/Flores
Course usually offered in fall term
Also Offered As: LALS 661
Activity: Lecture
1 Course Unit
Notes: Permission needed from the department

EDUC 662 Picturebooks and the Practice of Literacy
This course examines the formal properties of picturebooks and their use in enabling literacy development. The course uses aesthetic theory, theories of text-picture relationships, theories of literacy and theories of literary understanding, and also exposes students to empirical research on children's responses to this literary form.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 663 Sociocultural Foundations in Counseling
The course provides an understanding of sociocultural concepts essential to the work of counselors and providers of psychological services. This course provides a contextual and applied understanding of working with socioculturally diverse clients. The purpose of this course is to expand one's understanding of the impact of sociocultural and contextual factors, social-psychological influences, the role of values, and the interaction of identities in counseling and psychological services. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural psychology and the topical areas addressed in the course.
Taught by: Warren/Staff
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 664 Participatory Educational Research in Global Perspective: Theory and Practice
This course examines participatory models and frameworks in relation to international applied educational development research. Through a critical examination of approaches to international applied development research, the course examines real-world models of development research in order to examine questions regarding the nature of knowledge, post-colonial histories, researcher positionality, and the relationships between concepts, theory, methodology, community, and identity. Course focuses on participatory methodologies as cross-sector strategy frameworks for sustainable, equitable, locally driven educational development efforts.
Taught by: Ravitch
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 665 Research on Teaching
This course is designed to explore the research literature on classroom teaching processes as well as the contrasting conceptual and methodological approaches upon which this literature is based. The course introduces students to the major substantive areas in the field, develops a critical perspective on contrasting paradigms, and raises questions about the implication of research on teaching for curriculum, instruction, evaluation, and teacher education.
Taught by: Remillard
Course offered spring; odd-numbered years
Activity: Lecture
1 Course Unit

EDUC 667 Introductory Statistics for Educational Research
Scales of measurement; indices of central tendency and variability; product-movement correlation; introduction to the chi-squared; Z, T, and F distributions.
Course offered summer, fall and spring terms
Activity: Lecture
1 Course Unit
EDUC 668 Master's Paper Seminar
This seminar explores key foundational questions for graduate level work: How is academic knowledge formed and reproduced? How do we engage with and interrogate the scholarly research? And, how do we participate in the academic conversation around a topic? The Master's Paper Seminar introduces students to academic discourse, disciplinary writing conventions, and research practices. As part of this course, students are guided through preparing a literature review of a topic of their choice. This review, in turn, forms the foundation of their 30-40 page Master's Paper that is required for the completion of the M.S.Ed degree.
Taught by: Aplenc/Posecznick
Two terms, student must enter first term.
Activity: Lecture
0.5 Course Units

EDUC 669 Seminar in Practitioner Inquiry
This course is designed as a collaborative investigation into practitioner inquiry and the work of inquiry communities in K-16 and graduate/professional school settings, professional networks and community-based organizations. The focus is on conceptual and methodological frameworks and methods of practitioner inquiry and the contexts, purposes and practices of differently situated inquiry communities. Participants will explore a range of practitioner inquiry traditions and texts that go by terms such as action, collaborative, critical, community-based, participatory, autobiographical, emancipatory, narrative and pedagogical. They will also conduct an inquiry based on their particular interests and contexts. The course will emphasize practitioner inquiry that intentionally engages issues of equity, access and culture in educational settings.
Taught by: Campano
Course offered spring; even-numbered years
Activity: Lecture
1 Course Unit

EDUC 670 Second Language Development
This course provides an introduction to theory and research on second/multilingual language development. Linguistic, cognitive, social, political, and educational perspectives are considered through readings, lectures, activities, and assignments. Students gain an understanding of research design, methodology, and documentation through guided analysis of published studies and an opportunity to design research projects.
Taught by: Butler/Larsen-Freeman/Matsumoto
Course usually offered in spring term
Also Offered As: GRMN 516
Activity: Lecture
1 Course Unit

EDUC 671 Adult Literacy
Teaching reading/writing/literacy to adults for whom English is a first or second language. Topics include contrasting conceptions of literacy and learning; participatory literacy programs; instruction and curriculum for adults with diverse cultural and linguistic backgrounds and nationalities; alternative/performance-based assessment; and practitioner research in adult literacy education.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 673 Curriculum & Pedagogy in International Contexts
This course explores the problems, issues, and approaches to teacher preparation and the development of curricula and instructional materials, particularly (though not exclusively) in developing country contexts through a seminar styled class and a hands-on semester long project.
Taught by: Ghaffar-Kucher, Ameena
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 674 Curriculum and Materials Development for English Language Teaching
This course is designed for those who are ready to develop skills in curriculum, course and materials design. The objectives of the course include learning how (a) to become able to analytically respond to readings on curriculum, course and materials development; (b) to analyze the sociocultural, economic, linguistic and occupational contexts of language teaching programs; (c) to design an original semester-long ESL/EFL course; (d) to design original pedagogical tasks and supplementary materials; and (e) to design in a group. EDUC 527 & EDUC 537 provide essential background for this advanced course.
Taught by: Wagner, S
Course usually offered in fall term
Prerequisite: EDUC 527 & EDUC 537 or permission from instructor
Activity: Lecture
1 Course Unit

EDUC 675 Structure of English
The goal of this course is to increase students’ explicit knowledge of selected isolable parts of the English language and to identify their pedagogical applications with respect to the needs of learners of English as a foreign/second language. This goal is realized through an investigation of: 1) frequently occurring linguistic forms and the rules and principles that govern the way that these forms can be combined and ordered; 2) the meanings that can attach to these forms; and 3) the social functions associated with these forms.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 676 Discursive Approaches in Intercultural Communication
This course offers a discoursal-based approach and hands-on introduction to the field of intercultural communication, from the micro-level of interpersonal interaction to the macro-level of institutional practice. Through a series of readings and service learning projects in multicultural settings, students will hone their observational and analytic abilities, while gaining an appreciation of and facility for participating in the communicative diversity around them. Topics will include a repertoire approach to examining language in use, interpretation and metacommentary, and the possibility of intervention to facilitate new communicative patterns.
Taught by: Rymes/Moore
Course usually offered in fall term
Activity: Lecture
1 Course Unit
EDUC 677 Information and Communications Technologies for Education and Development in Global Perspective
The importance of the relationship between education, technology, and social-economic development is increasing in the U.S. and around the world. What are new information and communications technologies (ICTs), how are they being deployed, and for what reasons? Are new ICTs a means for delivering skill-based or distance education information, and in what ways are they becoming a part of societies today? What constitutes, then, ICTs for Development (ICT4D), and what role do they play in societies that are "industrialized" and "developing".
Taught by: Wagner
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 678 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g., the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.
Taught by: Cross
Course usually offered in fall term
Also Offered As: GSWS 678
Activity: Seminar
1 Course Unit

EDUC 679 Reading, Writing, and Critical Thinking for Applied Linguistics
This course offers international students a hands-on introduction to the practices that constitute academic language use in the fields of TESOL/ICC through a variety of scholarly readings that also serve as an introduction to multilingual writing research. Participants will focus on developing skills and strategies that will strengthen their existing expertise in the following areas: locating, reading, and critiquing academic articles; producing graduate-level written work across a variety of genres; and participating in oral activities.
Taught by: Pomerantz/Box/Kozlova
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 680 Evaluation of Policies, Programs and Projects
Basic evaluation policy and methods for determining nature and severity of problems, implementation of programs relative effects and cost-effectiveness of interventions to reduce problems, design and conduct of evaluation studies in education, social services, crime and delinquency, in the U.S. and other countries.
Taught by: Boruch
Course usually offered in fall term
Prerequisite: EDUC 667 or equivalent
Activity: Lecture
1 Course Unit

EDUC 681 Literacy and Illustrated Texts: Picturebooks, Comics and Graphic Novels
Students develop familiarity with illustrated materials - including picturebooks, comics, and graphic novels - while cultivating understanding of how illustrated texts like these can be used in 21st century elementary/middle/secondary literacy curricula. Students complete individualized and group course projects that focus on illustrated texts in specific classroom, research, critical, theoretical, home, community, and/or professional contexts.
Taught by: Thomas
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 682 Qualitative Modes of Inquiry
This course surveys the field of qualitative research and focuses on foundational philosophies of and approaches to qualitative research. The course focuses on the stages of qualitative research including the development of researchable questions, research designs, conceptual frameworks, methodological stances, data collection and analysis and instrument design and implementation.
Taught by: Ravitch/Strong/Staff
Course offered summer, fall and spring terms
Activity: Lecture
1 Course Unit

EDUC 683 Survey Methods & Design
This course covers the methods and design of field surveys in the U.S. and other countries in education, the social sciences, criminal justice research, and other areas. It covers methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Finally, the fundamentals of statistical sampling and sample design are handled. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state and local agencies.
Taught by: Boruch
Course usually offered in spring term
Prerequisites: Educ 667 or equivalent. Undergraduate statistics or tests and measurement.
Activity: Lecture
1 Course Unit

EDUC 684 Measurement & Assessment
Analysis of primary assessment concepts including basic theoretical principles, types and purposes of assessment devices, levels of measurement, standardization and norming, and methods to support reliability and validity; special focus on appropriate test interpretation, fairness, measurement of change, and incremental validity; application of standards for test development, usage, and critique in education, health care, public policy, and scientific inquiry.
Taught by: Victor
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 685 Career Counseling and Development
Career development is studied as an aspect of general development theories of educational and vocational choice and adjustment; psychological aspects of occupations.
Course usually offered summer term only
Prerequisites: Permission needed from instructor.
Activity: Lecture
1 Course Unit
EDUC 686 Counseling Interventions
This course will provide an overview of the approaches to various psychological interventions with a focus on theory, key concepts, and therapeutic processes. The purpose of this course is to develop a knowledge base of the underlying principles and approaches of psychological interventions. Students will be required to demonstrate a working knowledge of the key concepts of the psychotherapeutic approaches presented, distinguish between different approaches, and make a preliminary rationale for the use of a particular approach. Students also are expected to develop a critical perspective and demonstrate the ability to analyze theories and interventions.
Course usually offered in fall term
Prerequisites: Admission to Counseling and Mental Health Services.
Activity: Lecture
1 Course Unit

EDUC 687 Counseling Ethics & Professional Principles
This course will provide the student with an opportunity to learn and incorporate the multifaceted roles of the professional counselor and assist the student in developing a sense of their professional identity. In this process, the course will focus on the professional role of the counselor; ethics and their application across situations and professional settings; and gaining strong professional communication abilities. The primary goals of the course are to develop the student's awareness of their roles and responsibilities as a professional, incorporating ethical standards as a counselor, increasing professional communication skills, and understanding the roles of counselor across professional settings.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 688 Counseling Practicum
Seminar and lab to accompany supervised practicum or apprenticeship experiences in schools, colleges, or community agencies. Placement to be arranged by instructor.
Two terms. Student must enter first term.
Activity: Lecture
1 Course Unit

EDUC 689 Contemporary Issues in Mathematics Curriculum
Educational leaders and policy makers in the U.S. have long used curriculum reform to drive change in K-12 teaching and schooling practices. This course examines the assumptions underlying this approach and examines the related research evidence.
Taught by: Remillard
Course offered spring; odd-numbered years
Activity: Seminar
1 Course Unit

EDUC 691 Contemporary Issues in Science and Technology Education Research
This course focuses on topics that represent some of the most salient and contemporary issues in science education research today. The syllabus moves through four sections that address: 1) Curriculum and Content (What and Why); 2) Learning Processes (How); 3) Contexts (When and Where); 4) Teaching and Teacher Education (Who).
Taught by: Yoon
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 692 Education Policy Issues
This course is an introduction to the process of conducting educational research. Its purpose is to help students learn to approach problems like researchers by examining and critiquing existing research and developing coherent "researchable" questions. Students will carry out a substantial independent project where they will develop elements of a research proposal.
Taught by: Maynard
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 693 Student Development in College Environments
An overview of college student development theory is offered in this course. Specifically, three families of theory are explored: 1) Psychosocial and identity, 2) cognitive-structural, and 3) environmental. The theories are discussed in terms of their foundations, constructs, and applicability to work in various functional areas of higher education.
One-term course offered either term
Activity: Seminar
1 Course Unit

EDUC 694 Organization and Administration of Intercollegiate Athletics
Athletics play a critical role at colleges and universities. This course examines the role of intercollegiate athletics, how they are structured, what educational purposes they serve and how such programs influence the social and academic development of students.
Taught by: Weaver/Staff
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 695 Proseminar in International Educational Development
The IEDP Proseminar covers the broad arena of international educational development. The course is designed to provide an analytical perspective on applied research and policy as undertaken by UN, donor and non-profit agencies, with a focus on developing countries. Several invited specialists will participate in the course. This Proseminar is a required course for IEDP Masters students.
Taught by: Wagner
Two terms. Student must enter first term.
Activity: Seminar
0.5 Course Units

EDUC 696 Informal Learning Experience Internship
The Informal Learning Experiences Internship is a two-semester course that meets throughout the academic year to cover theory, research, and practice of informal learning. The internship is undertaken from October to March each academic year in one of our partnership institutions and includes about 120 hours field work. The course is designed to provide background readings, a discussion forum of central issues in informal learning, and a place to share and exchange internship experiences. This course will be required for all LST MSED and TLL MSED students as part of the required Internship Program.
Two terms. Student must enter first term.
Activity: Lecture
0.5 Course Units
EDUC 697 Post-Master's Internship in School Counseling
Seminar to accompany post-master's internship. Meets requirements for certification in school counseling and special education. Instructor must approve placement.
Course not offered every year
Prerequisites: Successful completion of the master's program in Psychological Services.
Activity: Lecture
1 Course Unit

EDUC 698 Politics of School Reform
In this seminar we'll explore the political causes and consequences of school reform in the post-Brown era. Coverage will be eclectic so as to give participants a broad, interdisciplinary background in the field. We'll draw primarily from the politics of education literature, but we'll reach beyond and examine work from political science, sociology and history. Rather than the standard categories organizing this scholarship—by level (local, state, federal), decision-making body (school board, legislature, judiciary), or issue area (standards, decentralization, funding)—we'll structure our exploration by considering fundamental conclusions about the politics of school reform: (1) School reform as contained politics, (2) School reform as transgressive politics, (3) School reform as collaborative politics, and (4) Institutions, ideas, & interests as constraints on the politics of school reform.
Taught by: Quinn
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 700 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 721). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project.
Taught by: Hall
Course not offered every year
Also Offered As: ANTH 707
Prerequisites: Must have completed EDUC 721 or equivalent introductory qualitative methods course.
Activity: Lecture
1 Course Unit

EDUC 702 Conceptual Models of School Leadership & Organization
This graduate seminar has three components. One, we will explore contemporary theories of organization as frameworks for understanding how classrooms, schools, and districts function. Two, we will employ a case method approach on several real-world cases developed by Harvard Business School and the Public Education Leadership Project at Harvard University. Three, we will learn from and interact directly with local education leaders and their communities through a series of school leadership study tours.
Taught by: Quinn
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 703 Advanced Qualitative and Case Study Research
This course explores epistemological and methodological choices and stances in qualitative research as well as advanced research methods including qualitative research design and concept mapping, sampling/participant selection, interviewing, coding and data analysis, instrument development and triangulation techniques.
Taught by: Ravitch
Course usually offered in spring term
Prerequisites: EDUC 682 Qualitative Modes of Inquiry
Activity: Lecture
1 Course Unit

EDUC 704 Economics of Higher Education
Covers selected topics in the economics of higher education, including investment and consumption theories, cost functions, university investment practices and principles, and academic labor markets.
Taught by: Presley
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 705 Proseminar in Research & Analysis
This course is designed to provide students with the skills, information, and resources that are necessary to develop a research proposal. This course will also examine strategies for completing proposals and dissertations. A variety of research designs and approaches to educational research will be explored. Through this course, students will become both informed consumers of research and effective designers of research.
Taught by: Pema/Hartley
Course usually offered in fall term
Prerequisites: Permission needed from department.
Activity: Lecture
1 Course Unit

EDUC 706 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Taught by: Hall
Course not offered every year
Also Offered As: ANTH 704, FOLK 706, URBS 706
Prerequisite: EDUC 547
Activity: Lecture
1 Course Unit

EDUC 707 Improving Schools: What Works, What Doesn't, and Why
Designed to increase knowledge of what works to improve public schools, what doesn't, and why. Topics include accountability, turnaround and charter schools, Common Core Standards, and other organizational, curricular, teacher and leader reforms. Focuses on how reforms are translated to the classroom, and effects on districts, principals, teachers, and students.
Course not offered every year
Activity: Lecture
1 Course Unit

**EDUC 708 Schools as Organizations**
Schools are places of learning - but they are also workplaces, teachers are employees and teaching is a job. This in-depth doctoral-level course focuses on theory and research concerned with the organizational and occupational side to schools and teaching. It draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools.
Taught by: Ingersoll
Course usually offered in spring term
Activity: Lecture
1 Course Unit

**EDUC 709 Peer Relationships in Childhood and Adolescence.**
This course focuses on various aspects of children’s peer relationships, especially with regard to their significance for human development.
The roles of family, community, and socio-cultural contexts in the development of interpersonal competence and relationships are discussed. The course explores possible intervention strategies to help children with peer relationship difficulties.
Taught by: Chen
Course usually offered in spring term
Activity: Lecture
1 Course Unit

**EDUC 710 Methods of Discourse Analysis**
This course introduces several methodological approaches that have been developed to do discourse analysis. The course intends primarily to provide students with various methodological tools for studying naturally-occurring speech. Assignments include both reading and weekly data analysis exercises.
Taught by: Hymes
Course not offered every year
Prerequisites: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.
Activity: Lecture
1 Course Unit

**EDUC 712 Comprehensive School Reform: From ‘No Child Left Behind’ through ‘Race to the Top’ to ‘Every Student Succeeds Act’**
This course examines how K-12 education policy is designed and implemented in the United States. It uses a systems analysis as the framework for looking at who makes what kinds of demands on the education policy system, how these demands are placed on the policy agenda, the decision making process, and resulting education policies and policy outcomes. The course pays particular attention to the roles of federal, state and local governments in education policy, and the impact of our intergovernmental system on the design and implementation of policy. Students will also examine major education policies and debate key education policy issues that arise at each level of government.
Course not offered every year
Also Offered As: AFRC 712, SWRK 716
Activity: Seminar
1 Course Unit

**EDUC 713 Responding to Literature: An Interdisciplinary Perspective**
This course deals with the ways in which readers respond to and transact with literary texts, and aims at helping students understand the nature of the variety of ways in which literature interfaces with our lives. Three different types of discourse are read: literary criticism; empirical research on response to literature; and literary texts themselves. Various types of literary criticism are considered, including (but certainly not limited to) what is commonly called "reader response criticism"; text-based criticism; and criticism that contextualizes literature socially and historically. The empirical research on response deals with ways in which readers of various ages interact with literature, mostly in school settings; some attention is given to instructional design and critique of methodology. The literary texts range from picturebooks to literature for young adults.
Taught by: Thomas
Course usually offered in fall term
Activity: Seminar
1 Course Unit

**EDUC 714 Law and Higher Education**
An examination of the most important state and federal laws governing U.S. colleges and universities, with an emphasis on current legal problems.
Taught by: Roth
Course usually offered in fall term
Activity: Lecture
1 Course Unit

**EDUC 715 Case Studies in Higher Education Administration**
This course is designed to enhance understanding of decision making in higher education administration. Based on case studies, students will analyze, propose policies, generate action plans and implementation procedures, and assess the potential consequences of their administrative decisions.
Course not offered every year
Activity: Lecture
1 Course Unit

**EDUC 716 Public Policy Issues in Higher Education**
A study of the most influential federal and state policies, legislation and practices affecting colleges and universities.
Taught by: Finney
Course usually offered in spring term
Activity: Lecture
1 Course Unit

**EDUC 717 Professional Internship in Counseling I**
The course will consist of experiential and small group learning, with a focus on practicing and refining skills related to advanced work in psychological services, including the application of various techniques of counseling, ethical considerations, and critiques of live and simulated counseling sessions through role-playing, audio and visual taping.
Taught by: Watts
Course usually offered in fall term
Prerequisites: Formal admission into Professional Counseling and Psychology M.Phil.Program.
Activity: Lecture
1 Course Unit
EDUC 718 Professional Internship in Counseling II
Lab seminar group with a seminar group leader is the second component of the Professional Counseling Internship course. Lab will provide students with exposure to others’ experiences in different types of internships, working with a variety of different client populations. A primary goal of this course is to help each student refine his/her evolving knowledge of self as a provider of psychological services to others. Students will also evaluate contexts of practice and the professional skills, ethics and practices inherent in effective provision of counseling and psychological services. This course consists of two components: CLASS MEETINGS, during which the full group will meet to address issues related to work in various internships, as well as discuss the development of advanced counseling skills and issues; and, LAB SEMINAR GROUP, which consists of 7-8 masters students with a seminar group lab leader.
Taught by: Watts
Course usually offered in spring term
Prerequisites: Students must be enrolled in the M.Phil.Ed. in Professional Counseling Program.
Activity: Lecture
1 Course Unit

EDUC 719 Research on Teacher Education and Learning to Teach
This course focuses on issues of research, practice, and policy related to teacher education at the preservice, induction, and continuing education levels in the United States and internationally. The course is designed as a seminar to engage participants in the study of teacher education through interaction with researchers and policy-makers, through in-depth study of critical issues in the field, and through engagement with teacher education programs. It is anticipated that each course participant will develop a literature review focusing on one or more topics related to critical issues in teacher education.
Taught by: Reisman/Staff
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 720 Teachers and Teaching Policy
Explores research, policies, and practices that promote a high-quality teacher workforce, and effective instruction. Topics include recruitment, retention, mentoring, induction, professional development, certification, value-added, merit pay, etc. Appropriate for students from different programs, including education, social/public policy, psychology, political science, sociology, business, and current and future teachers and school leaders.
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 721 Ethnographic Research Methods
A course in ethnographic participatory observational research; its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course.
Taught by: Hall/Strong
Course not offered every year
Also Offered As: FOLK 672
Prerequisites: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.
Activity: Lecture
1 Course Unit

EDUC 723 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences.
Taught by: Gadsden
Course usually offered in fall term
Also Offered As: AFRC 723
Activity: Lecture
1 Course Unit

EDUC 724 Literacy: Social and Historical Perspectives
A review of the cross-cultural and historical literature on writing and reading with emphasis on the identification of norms and practices which affect the teaching and learning of reading and literacy today. Special attention to the social functions of literacy in work, home, and school settings and to myths regarding the consequences of literacy for cognition, socio-economic mobility, and predictability, and the predictability of citizen behaviors.
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 725 Advanced Professional Development & Ethics in Counseling
The purpose of this course is to expand the student’s awareness of the multifaceted responsibilities and roles of school counselors in primary and secondary school settings. Through readings, class discussions and guest lectures, it is intended that students will acquire additional competencies and a broader appreciation for professional issues confronted by school counselors and varied responsibilities they have in helping students focus on academic, personal, social and career development in an effort to achieve success in school and lead fulfilling lives. An important emphasis of this course will be on school counseling from an ecological and multicultural perspective.
Prerequisites: Students must be enrolled in the M.Phil.Ed. in Professional Counseling Program.
Activity: Lecture
1 Course Unit
EDUC 726 Doctoral Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. Taught by: Kafai/Remillard/Yoon/Reisman/Staff
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 727 Education, Culture and Society
This course surveys basic issues in the philosophical and social foundations of education, addressing basic questions about the purpose of education, mostly through reading primary texts. Intended for incoming doctoral students. Taught by: Ben Porath
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 729 International Educational Development Doctoral Proseminar
The IEDP Doctoral Proseminar covers the broad arena of international educational development. Drawing on the research experiences of the faculty and of the enrolled doctoral students, the course allows for the analysis of intellectual and technical challenges of working in international education and development, especially around issues of social and public policy. Taught by: Ghaffar-Kucher,Ameena & Wagner, Dan
One-term course offered either term
Activity: Lecture
1 Course Unit

EDUC 731 Risk, Resilience, and Prevention Science
Examines the definition and measurement of risk from resilience from the perspectives of developmental psychology and ecological theories of development; introduces students to the conceptual and practical integration of intervention and prevention sciences to address social, emotional, educational, and health problems across childhood. Taught by: Wolf
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 735 Tutorial Work in Reading/Write/Literacy
Tutorial in Reading Writing and Literacy, is designed for participants to gain knowledge and insight into the major challenges facing learners in their quest for proficiency in literacy. The course participants investigate and develop instructional plans for the literacy needs of learners in pre-K to 12th grade settings. Course participants will investigate the roles and responsibilities of the literacy specialist as related to identifying the needs of learners and planning appropriate instruction to meet those needs. Taught by: Gross
Course usually offered in spring term
Prerequisites: Permission needed from instructor.
Activity: Lecture
1 Course Unit

EDUC 737 Research in Teaching Writing
This doctoral seminar explores theories and research on writing, investigating current and traditional areas of inquiry in the field of writing studies. As class participants review and analyze theoretical and empirical literature on writing and teaching writing, the seminar will offer students opportunities to compose texts and reflect on their roles as writers in the academy through collaborative inquiry. Participants will think together about the purposes, functions, and consequences of writing in diverse communities and across school and out-of-school settings. The course will pay particular attention to how writing is shifting in a mobile, networked, global age, and how multimodality, interactivity, and hybridity characterize our composing lives. Taught by: Stornaiuolo, A
Course offered spring; odd-numbered years
Activity: Lecture
1 Course Unit

EDUC 738 Advanced Topics in Monitoring & Evaluation in International Education Development
This is a sequel to the Principles of M&E course offered in the fall. The course will review both theories as well as methods of program evaluation in a deeper way using papers and technical reports as case studies, with special emphasis on international education development. Taught by: Thapa
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 739 Poverty and Child Development
The goal of this course is to help students develop a coherent understanding of the ways in which poverty affects families and children, the different needs of families and children across different developmental stages of childhood, and the intersection between poverty and education. Taught by: Wolf
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 744 Building Inclusive Communities in Higher Education
This course provides students an opportunity to apply their knowledge related to the practice of higher education administration. The goal of the course is to advance students’ understanding of climate on today’s campuses and to utilize diverse methods to create inclusive spaces on campus for all institutional stakeholders. Taught by: Tao
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 747 Biological Psychology
The biological bases of behavior, including genetics, physiology, endocrinology and biochemistry. Course not offered every year
Activity: Lecture
1 Course Unit
EDUC 751 Introduction to Applied Quantitative Methods for Education Research: Pre-K to 20
An introduction to the interpretation and use of data about education policy issues through the use of computer-assisted methods of statistical analysis. Emphasis is on the implications for educational policy and research design.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 764 Cognitive Processes
Basic concepts, theory, and research in cognitive science, problem-solving, psycholinguistics, memory, perception and social cognition. Special topics may include reading, bilingualism, computer modeling, and cognitive theory applied to education and non-education settings.
Taught by: Frye
Prerequisite: EDUC 568 or equivalent
Activity: Lecture
1 Course Unit

EDUC 765 Developmental Deviations
Theoretical orientations toward handicapping conditions in children; controversial issues in description and categorization; the relationship of disabilities to developmental (cognitive, social, emotional) processes.
Course not offered every year
Prerequisite: EDUC 560 or equivalent
Activity: Lecture
1 Course Unit

EDUC 766 Advanced Professional Counseling Interventions
This course will focus on advanced issues in the clinical practice of professional psychology with children, adolescents and adults where students will practice clinical skills in role-played therapeutic situations. Students will be using this class as preparation for the formal clinical examination required by all Master of Philosophy in Education students prior to graduation from the Professional Psychology and Counseling program.
Taught by: Morris/Stevenson
Course usually offered in fall term
Prerequisites: Admission into Professional Counseling M.Phil.Ed. Program
Activity: Lecture
1 Course Unit

EDUC 767 Regression and Analysis of Variance
This course covers design of controlled randomized experiments, analysis of survey data and controlled field experiments, including statistical models, regression, hypothesis testing, relevant data analysis and reporting.
Taught by: Rovine/Victor
One-term course offered either term
Prerequisite: EDUC 667 or equivalent
Activity: Lecture
1 Course Unit

EDUC 768 Measurement Theory and Test Construction
Design of ability, achievement, and performance measures such as those applied for high-stakes decision making in large-scale assessment and for diagnosis and classification of individuals; advanced true-score and item response theory; item formatting, analysis, selection, calibration, linking, and scaling; analysis of reliability for continuous, ordinal, nominal, and composite scales; analysis of differential item functioning; unidimensionality, and local independence; model contrasting, test equating, and scaling for longitudinal assessment; standards and cut-point setting.
Taught by: McDermott
Course not offered every year
Prerequisite: EDUC 684 or equivalent
Activity: Lecture
1 Course Unit

EDUC 770 New Models for Postsecondary Education
Taught by: Pitchett
Course not offered every year
Also Offered As: LAW 970
Activity: Seminar
1 Course Unit

EDUC 771 Factor Analysis and Scale Development
Advanced measurement theory; exploratory and confirmatory item factoring and clustering for self-report, observational, rating, performance, and personality instruments; factoring of dichotomous and ordered categorical data; full-information factoring; scaling procedures; hierarchical structure, full-information bifactor structure, invariance, generalizability, reliability, validity, interpretation, and scientific reporting.
Taught by: McDermott
Course usually offered in fall term
Prerequisites: EDUC 684 or equivalent.
Activity: Lecture
1 Course Unit

EDUC 777 Structural Equations Modeling
Theory and application of means modeling and longitudinal analysis through structural equations, including observed variable regression with multiple equations simultaneously estimated, confirmatory factor analysis measurement models using multiple observed indicators to define sets of latent variables, and regression relationships among multiple latent variables; advanced applications for repeated measures and multilevel growth modeling in educational and social science research.
Taught by: Rovine
Course usually offered in spring term
Prerequisite: Introductory Statistics
Activity: Lecture
1 Course Unit

EDUC 782 Assessment for Counselors I
A critical analysis of tests and clinical methods in assessment as related to theories of intelligence, and includes: 1) factors influencing assessments; 2) assessment theory; 3) assessment practices; 4) interpretations of assessments.
Prerequisites: Admission to Professional Counseling M.Phil.Ed. Program
Activity: Lecture
1 Course Unit
EDUC 783 Assessment for Counselors II
Review and administration of assessment instruments in the areas of adaptive behavior, perceptual abilities, neurological functioning, diagnostic and achievement measures, vocational interests, and objective personality measures. Integration and interpretation of results and intervention.
Course usually offered in spring term
Prerequisites: Admission to Counseling and Mental Health Services or Professional Counseling M.Phil. Program
Activity: Lecture
1 Course Unit

EDUC 784 Psychological Consultation
Study of theories of consultation and their applications at the professional level. Methods and procedures in applied behavior analysis are introduced as skills for successful consultation.
Course not offered every year
Prerequisites: Admission to Counseling & Mental Health Services or Professional Counseling M. Phil. Program
Activity: Lecture
0.5 Course Units

EDUC 785 Selected Topics in Professional Psychology
Consideration of research and theory, on selected advanced topics.
Course not offered every year
Prerequisites: Admission to Counseling & Mental Health Services or Professional Counseling M. Phil. Program
Activity: Lecture
1 Course Unit

EDUC 806 Narrating the Self
This seminar explores, in some linguistic detail, how narrators can partly construct their selves while telling autobiographical stories. The seminar addresses three questions: What is the structure of narrative discourse? How might we construct ourselves by telling stories about ourselves? If narrative is central to self-constructions, what is "the self"?
Taught by: Hyms
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 829 Policy Research Analysis
Study of the roles of scientific inquiry in development and assessment of contemporary educational and social policy. Analysis and application of foundational research, statistical and psychometric methods to inform a variety of policy topics and related issues and problems encountered in policy formation and evaluation.
Taught by: Rovine
Course usually offered in spring term
Prerequisites: EDUC 667 or equivalent.
Activity: Lecture
1 Course Unit

EDUC 834 Theories of Reading
This course is designed as a collaborative inquiry toward constructing and elaborating theories of practice as teachers and/or researchers of reading. Using a seminar or working group format, participants explore the relationships among theory, reading practice, pedagogy and research. The course's conceptualization is informed primarily by (1) frameworks from critical, feminist and culturally-centered literatures which foreground issues of equity, representation, and ethics; and (2) current conversations in the field of literacy where the definitions, purposes, and practices of reading have been made problematic. It also invites participants to engage the notion that knowledge for teaching and research comes from inquiry into the questions, issues, and contradictions that arise from everyday life. The course provides historical lenses for comparative analyses of theoretical frameworks and research paradigms as well as opportunities to investigate participants' individual histories as well as teaching and research interests.
Taught by: Campano
Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

EDUC 835 Seminar in Reading and Writing
Participants in the course examine landmark studies in the field of reading, writing, and literacy; explore different approaches to composing critical reviews of the literature for academic journals, dissertations and other research projects; and select, search, and review the theoretical and empirical literature related to a topic of their own interest in the domains of reading, writing and literacy.
Course not offered every year
Activity: Seminar
1 Course Unit

EDUC 836 Issues in Instructional Leadership in Reading and Writing
Participants will consider current critical issues in Reading, Writing, and Literacy, such as: improving accountability and assessment; approaches to professional development and curriculum development; and the use of scientifically "valid" research to advance literacy learning.
Taught by: Waff
Course usually offered in spring term
Activity: Lecture
1 Course Unit

EDUC 838 Applied Research & Reporting
Hands-on experience conducting applied research. Students will be guided through a research project of relevance to education or social policy chosen by the student, with assistance from the instructor. The research entails analysis of one or more public or quasi-public use data sets, such as the National Longitudinal Survey of Youth; the National Longitudinal Survey of Youth Child Supplement; The Teenage Parent Demonstration Data Base; the National Profile of Child Care Settings Data Base; or the National Post Secondary Student Aid Survey. The students will prepare journal-length papers based on their research and respond to the reviews of classmates and the instructor.
Course usually offered in fall term
Prerequisites: Competence in basic statistics and computer literacy.
Activity: Lecture
1 Course Unit
EDUC 845 Seminar in Microethnography
This course provides an introduction to theory and method in the unified analysis of verbal and nonverbal behavior as it is culturally patterned, socially organized, and socially organizing in face-to-face interaction, in an approach that integrates participant observation with the detailed analysis of audiovisual records. Students read relevant literature in linguistic anthropology, interactional sociolinguistics, conversation analysis, and embodiment in social interaction. Class requirements include in-class reading presentations, a small microethnographic research project, and several short data analysis reports drawing on differing levels of analysis and differing theoretical orientations. Students review and apply methods of audiovisual data collection, transcription, processing, archiving, and presentation.
Taught by: Rymes
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 860 ISHD Proseminar: Exploring Self in Developmental Context
This course gives students the opportunity to better understand their own psychological development and how this interacts with their scholarship and professional development. Required course for ISHD students.
Taught by: Stevenson
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 871 Randomized Trials and Experiments
This course will cover three alternatives to conventional modeling in the social sciences: (1) design and execution of field trials in education and other social sectors including criminology, (2) quasi-experiments, especially contemporary research comparing results of randomized and non-randomized trials, and (3) analysis for descriptive and exploratory purposes. The course themes include causal inference, vulnerability of models applied to observational data, recent developments computer-intensive inductive approaches to data, and related matters. Although some methodological background papers will be discussed, the seminar is case study oriented with readings from contemporary research on the topics from peer reviewed journals and well-vetted reports issued by governmental and nongovernmental agencies. Cases will include work supported by IES on effects of Odyssey Math, for example, and work in the crime and justice arena. We will study the work of scholars affiliated with Penn who are actively involved in randomized and non-randomized trials, for instance, and the work of colleagues at other universities (Berkeley, Northwestern, Wisconsin, Princeton, others) and colleagues in non-profit and for-profit research organizations such as Analytica, AIR, Mathematica and others that contribute to learning in this area.
Taught by: Boruch
Course usually offered in fall term
Activity: Lecture
1 Course Unit

EDUC 880 Complex, Multilevel, and Longitudinal Research Models
Design construction, sampling, internal and external validity principles; univariate and multivariate statistical treatment of experimental and quasi-experimental data; computer processing, interpretation, and reporting for simple and complex factorial, repeated measures, time series, growth trajectory, unbalanced, and multiple consistent and inconsistent covariates designs; error covariance structure modeling, hierarchical linear (and nonlinear) modeling, and multilevel individual growth-curve modeling.
Taught by: McDermott
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: EDUC 767 or equivalent

EDUC 881 Applied Multivariate Statistics
Multivariate strategies for hypothesis testing, prediction, and classification including multiple regression, multivariate multiple regression, canonical regression, multiple logistic regression, multiple discriminant functions, factor analysis of scaled variables, hierarchical cluster analysis, and multivariate classification analysis; computer processing, interpretation, and reporting.
Taught by: McDermott
Course usually offered in spring term
Prerequisites: EDUC 767 or equivalent and permission of instructor.
Activity: Lecture
1 Course Unit

EDUC 900 Research Seminar in Applied Research Synthesis Methods
Issues in research design, development of a literature review, and dissertation proposal.
Taught by: Maynard
Course usually offered in fall term
Activity: Seminar
1 Course Unit

EDUC 911 Issues in Second Language Acquisition
This course is designed for students to be able to analyze, synthesize and discuss second language acquisition theory and research on the basis of intensive reading of work that reflects perennial and current issues in the field. Comparisons and connections are drawn from theoretical and empirical literature on second language acquisition processes, constraints, and interventions. Relevant research methods are also addressed. Topics, issues, and readings are updated each time the course is offered.
Taught by: Butler
Course not offered every year
Prerequisite: EDUC 670
Activity: Lecture
1 Course Unit
Notes: Permission needed from instructor
EDUC 917 Research Seminar: Language and Power
The course examines the relationship between language, meaning and power in their social context. The course is organized around a number of core themes: Language studies rooted in Critical Discourse analysis; The application of Bourdieu's concepts to this field; multi modality; the growing concern with 'Superdiversity' that links Local/ Global; academic literacies, with particular reference to the writing required in students' own contexts; and methodological issues in researching language and power; and we then bring all of this to bear on our own context under the heading 'language in education'.
Course not offered every year
Activity: Lecture
1 Course Unit

EDUC 920 Research Seminar in Reading and Writing
For doctoral candidates and others engaged in research and advanced professional study in the field of literacy.
Taught by: Campano
Course usually offered in spring term
Activity: Seminar
1 Course Unit

EDUC 927 Research Seminar: Language Policy and Education
Seminar participants are introduced to concepts, theories, and methods in the field of language planning and policy, which they then apply in developing their own library-based research on specific language planning cases from around the world. Cases may include: official language decisions, instructional medium choices, literacy initiatives, gender-neutral language reforms, foreign/heritage/second language pedagogy and policy, indigenous language revitalization efforts, or other language-related decisions and policies at international, national or local levels.
Taught by: Horber
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Permission needed from instructor

EDUC 960 Advanced Research in Human Learning and Development
Selected topics from human learning, human development, cognitive processes, social psychology, and personality.
Taught by: Frye
Activity: Lecture
1 Course Unit

EDUC 980 Research Seminar in Counseling
This course is designed to position students to acquire a more sophisticated understanding of research methods in order to conduct and critically evaluate empirical research in applied and clinical settings.
Activity: Seminar
1 Course Unit

Electricity & Systems Engineering (ESE)

ESE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: A maximum of 2 c.u. of ESE 099 may be applied toward the B.A.S. or B.S.E. degree requirements

ESE 111 Atoms, Bits, Circuits and Systems
Introduction to the principles underlying electrical and systems engineering. Concepts used in designing circuits, processing signals on analog and digital devices, implementing computation on embedded systems, analyzing communication networks, and understanding complex systems will be discussed in lectures and illustrated in the laboratory. This course provides an overview of the challenges and tools that Electrical Engineers and Systems Engineers address and some of the necessary foundations for students interested in more advanced courses in ESE.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: FOR FRESHMEN ONLY

ESE 112 Engineering Electromagnetics
This course covers basic topics in engineering electromagnetics, namely, electric charge, electric field, electric energy, conductors, insulators, dielectric materials, capacitors, electric current, magnetic field, inductors, Faraday's law of induction, alternating current (AC), impedance, Maxwell's equations, electromagnetic and optical wave propagation, with emphasis on engineering issues. Relevant engineering topics are emphasized in our lectures in order to prepare students for other courses in ESE that rely on the contents on this course. Several laboratory experiments accompany the course to provide hands-on experience on some of the topics in the lecture and prepare students for the capstone project.
One term course offered either term
Activity: Lecture
1.5 Course Unit

ESE 150 Digital Audio Basics
Primer on digital audio. Overview of signal processing, sampling, compression, human psychoacoustics, MP3, intellectual property, hardware and software platform components, and networking (i.e., the basic technical underpinnings of modern MP3 players and cell phones).
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: FOR FRESHMEN ONLY
ESE 190 Silicon Garage: Introduction to Open Source Hardware and Software Platforms
Project-centric learning course for non-ESE majors on microprocessor control of physical systems using open-source hardware and software platforms. Students will work in teams to develop software controlled systems based on the Arduino and Raspberry Pi that interface with the real world (sensors, actuators, motors) and each other (networking).
One term course offered either term
Prerequisites: High School Physics and Math
Activity: Lecture
0.5 Course Units

ESE 204 Decision Models
This first course in decision models will introduce students to quantitative models for decision making, using optimization and stochastic simulation. Examples will be drawn from manufacturing, finance, logistics and supply chain management. Students will use EXCEL and @Risk to build and analyze models.
Course usually offered in fall term
Prerequisite: MATH 104
Activity: Lecture
1 Course Unit

ESE 210 Introduction to Dynamic Systems
This first course in systems modelling covers linear and nonlinear systems in both continuous and discrete time. Topics covered include linearization and stability analysis, elementary bifurcations, and an introduction to chaotic dynamics. Extensive applications to mechanical, electrical, biological, social, and economic/financial systems are included. The course will use both analytical and numerical/symbolic tools.
Course usually offered in fall term
Corequisite: MATH 240
Activity: Lecture
1 Course Unit

ESE 215 Electrical Circuits and Systems
This course gives an introduction of modern electric and electronic circuits and systems. Designing, building and experimenting with electrical and electronic circuits are challenging and fun. It starts with basic electric circuit analysis techniques of linear circuits. Today mathematical analysis is used to gain insight that supports design; and more detailed and accurate representations of circuit performance are obtained using computer simulation. It continues with 1st order and 2nd order circuits in both the time and frequency domains. It discusses the frequency behavior of circuits and the use of transfer functions. It continues with introduction of non-linear elements such as diodes and transistors. Applications include analog and digital circuits, such as single stage amplifiers and simple logic gates. A weekly lab accompanies the course where concepts discussed in class will be illustrated by hands-on projects; students will be exposed to state-of-the-art test equipment and software tools (LabView, Spice).
Course usually offered in fall term
Prerequisites: PHYS 150, PHYS 151
Corequisite: MATH 240
Activity: Lecture
1 Course Unit

ESE 218 Electronic, Photonic, and Electromechanical Devices
This first course in electronic, photonic and electromechanical devices introduces students to the design, physics and operation of physical devices found in today’s applications. The course describes semiconductor electronic and optoelectronic devices, including light-emitting diodes, photodetectors, photovoltaics, transistors and memory; optical and electromagnetic devices, such as waveguides, fibers, transmission lines, antennas, gratings, and imaging devices; and electromechanical actuators, sensors, transducers, machines and systems.
Course usually offered in fall term
Prerequisites: PHYS 150, PHYS 151
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit

ESE 224 Signal and Information Processing
Introduction to signal and information processing (SIP). In SIP we discern patterns in data and extract the patterns from noise. Foundations of deterministic SIP in the form of frequency domain analysis, sampling, and linear filtering. Random signals and the modifications of deterministic tools that are necessary to deal with them. Multidimensional SIP where the goal is to analyze signals that are indexed by more than one parameter. Includes a hands-on lab component that implements SIP as standalone applications on modern mobile platforms.
Course usually offered in spring term
Prerequisite: MATH 104
Corequisite: MATH 240
Activity: Lecture
1.5 Course Unit

ESE 290 Introduction to Electrical and Systems Engineering Research Methodology
Introduction to the nature and process of engineering research as represented by ongoing ESE faculty and collaborating colleagues and industrial partners’ research projects. Joint class exercises in how to pursue effective background technical reading, pitch a proposal, and aim for the discovery of new human knowledge to complement the individually mentored topic specific project work.
Course usually offered in spring term
Prerequisites: MATH 240, PHYS 150, ESE 215 and ESE 218, or ESE 204 and 210, or ESE 215 and CIS 240
Corequisite: ESE 291
Activity: Lecture
0.5 Course Units

ESE 291 Introduction to Electrical and Systems Engineering Research and Design
Students contract with a faculty mentor to conduct a project in a topic of mutual interest. Prepare project report on research findings.
One term course offered either term
Corequisite: ESE 290
Activity: Laboratory
1 Course Unit
ESE 292 Introduction to Electromechanical Prototyping
This is a project-centric course for ESE majors to engage in circuit layout and prototype design skills. Students will work in teams to develop printed circuit boards using industry standard tools like Altium and learn mechanical prototyping skills using Solidworks. Emphasis will be on developing sound printed circuit board layout practices using circuitry knowledge that they acquire in ESE 215 and ESE 370. A module on using Cypress PSoC will introduce students to recent developments in analog/digital co-design.

One-term course offered either term
Activity: Lecture
0.5 Course Units

ESE 296 Study Abroad
Activity: Lecture
1 Course Unit

ESE 301 Engineering Probability
This course introduces students to the mathematical foundations of the theory of probability and its rich applications. The course begins with an exploration of combinatorial probabilities in the classical setting of games of chance, proceeds to the development of an axiomatic, fully mathematical theory of probability, and concludes with the discovery of the remarkable limit laws and the eminence grise of the classical theory, the central limit theorem. The topics covered include: discrete and continuous probability spaces, distributions, mass functions, densities; conditional probability; independence; the Bernoulli schema; the binomial, Poisson, and waiting time distributions; uniform, exponential, normal, and related densities; expectation, variance, moments; conditional expectation; generating functions, characteristic functions; inequalities, tail bounds, and limit laws. But a bald listing of topics does not do justice to the subject: the material is presented in its lush and glorious historical context, the mathematical theory buttressed and made vivid by rich and beautiful applications drawn from the world around us. The student will see surprises in election-day counting of ballots, a historical wager the sun will rise tomorrow, the folly of gambling, the sad news about lethal genes, the curiously persistent illusion of the hot hand in sports, the unreasonable efficacy of polls and its implications to medical testing, and a host of other beguiling settings.

Course usually offered in spring term
Prerequisite: MATH 114
Activity: Lecture
1 Course Unit

ESE 302 Engineering Applications of Statistics
Principles and engineering applications of statistical inference. The basic topics covered are parameter estimation, confidence intervals, and hypothesis testing. Additional topics may include analysis of variance (ANOVA) and/or linear regression. Each method is treated both from theoretical and applied viewpoints, including software analysis of selected data sets.

One-term course offered either term
Prerequisite: ESE 301 or equivalent course in Probability
Activity: Lecture
1 Course Unit

ESE 303 Stochastic Systems Analysis and Simulation
Stochastic systems analysis and simulation (ESE 303) is a class that explores stochastic systems which we could loosely define as anything random that changes in time. Stochastic systems are at the core of a number of disciplines in engineering, for example communication systems and machine learning. They also find application elsewhere, including social systems, markets, molecular biology and epidemiology. The goal of the class is to learn how to model, analyze and simulate stochastic systems. With respect to analysis we distinguish between what we could call theoretical and experimental analysis. By theoretical analysis we refer to a set of tools which let us discover and understand properties of the system. These analyses can only take us so far and is usually complemented with numerical analysis of experimental outcomes. Although we use the word experiment more often than not we simulate the stochastic system in a computer and analyze the outcomes of these virtual experiments. The class’s material is divided in four blocks respectively dealing with Markov chains, continuous time Markov chains, Gaussian processes and stationary processes. Emphasis is placed in the development of toolboxes to analyze these different classes of processes and on describing their applications to complex stochastic systems in different disciplines. Particular examples include: (i) the problem of ranking web pages by a search engine; (ii) the study of reputation and trust in social networks; (iii) modeling and analysis of communication networks; (iv) the use of queues in the modeling of transportation networks; (v) stochastic modeling and simulation of biochemical reactions and gene networks; (vi) arbitrages, pricing of stocks, and pricing of options through Black-Scholes formula; and (vii) linear filtering of stochastic processes to separate signals of interest from background noise. For more information visit the class’s web page at http://alliance.seas.upenn.edu/~ese303/wiki/. Course usually offered in fall term
Prerequisites: ESE 301 or equivalent and one computer language
Activity: Lecture
1 Course Unit

ESE 304 Optimization of Systems

Course usually offered in spring term
Corequisite: MATH 240
Activity: Lecture
1 Course Unit
ESE 305 Foundations of Data Science
Introduction to a broad range of tools to analyze large volumes of data in order to transform them into actionable decisions. Using case studies and hands-on exercises, the student will have the opportunity to practice and increase their data analysis skills.
Course usually offered in fall term
Prerequisite: EAS 205 or MATH 312; CIS 120; ESE 301
Activity: Lecture
1 Course Unit

ESE 310 Electric and Magnetic Fields I
This course examines concepts of electromagnetism, vector analysis, electrostatic fields, Coulomb’s Law, Gauss’s Law, magnetostatic fields, Biot-Savart Law, Ampère’s Law, electromagnetic induction, Faraday’s Law, transformers, Maxwell equations and time-varying fields, wave equations, wave propagation, dipole antenna, polarization, energy flow, and applications.
Course usually offered in spring term
Prerequisites: PHYS 151 and MATH 114
Activity: Lecture
1 Course Unit

ESE 319 Fundamentals of Solid-State Circuits
Analysis and design of basic active circuits involving semiconductor devices including diodes and bipolar transistors. Single stage, differential, multi-stage, and operational amplifiers will be discussed including their high frequency response. Wave shaping circuits, filters, feedback, stability, and power amplifiers will also be covered. A weekly three-hour laboratory will illustrate concepts and circuits discussed in the class.
Course usually offered in spring term
Prerequisite: ESE 215
Activity: Lecture
1.5 Course Unit

ESE 321 Physics and Models of Semiconductor Devices
Semiconductor materials form the basis of modern electronic technology. This course develops the physics of semiconductor devices, the evolution of modern semiconductor technology, device engineering considerations, and introduces emerging technologies. The course stresses intuitive understanding of the physics through interactive exercises, instructional videos, in-class examples and a research project. Topics covered include an introduction to quantum mechanics and band theory of solids; physics governing charge carriers in semiconductors; fundamental operating mechanisms for p-n junctions, bipolar and field-effect transistors, and optoelectronic devices; and an introduction to nanoscale devices and the limits of transistor scaling.
Course usually offered in fall term
Prerequisite: ESE 218 or by permission of the instructor
Activity: Lecture
1 Course Unit

ESE 325 Fourier Analysis and Applications in Engineering, Mathematics, and the Sciences
This course focuses on the mathematics behind Fourier theory and a wide variety of its applications in diverse problems in mathematics, engineering, and the sciences. The course is very mathematical in content and students signing up for it should have junior or senior standing. The topics covered are chosen from: functions and signals; systems of differential equations; superposition, memory, and non-linearity; resonance, eigenfunctions; the Fourier series and transform, spectra; convergence theorems; inner product spaces; mean-square approximation; interpolation and prediction, sampling; random processes, stationarity; wavelets, Brownian motion; stability and control, Laplace transforms. The applications of the mathematical theory that will be presented vary from year to year but a representative sample include: polynomial approximation, Weierstrass’s theorem; efficient computation via Monte Carlo; linear and nonlinear oscillators; the isoperimetric problem; the heat equation, underwater communication; the wave equation, tides; testing for randomness, fraud; nowhere differentiable continuous functions; does Brownian motion exist? error correction; phase conjugate optics and four-wave mixing; cryptography and secure communications; how fast can we compute? X-ray crystallography; cosmology; and what the diffusion equation has to say about mathematical finance and arbitrage opportunities.
Course usually offered in fall term
Prerequisites: MATH 240, Junior or Senior Standing
Activity: Lecture
1 Course Unit

ESE 350 Embedded Systems/Microcontroller Laboratory
An introduction to interfacing real-world sensors and actuators to embedded microprocessor systems. Concepts needed for building electronic systems for real-time operation and user interaction, such as digital input/outputs, interrupt service routines, serial communications, and analog-to-digital conversion will be covered. The course will conclude with a final project where student-designed projects are featured in presentations and demonstrations.
Course usually offered in spring term
Prerequisite: Knowledge of C programming or permission of the instructor
Activity: Lecture
1.5 Course Unit

ESE 370 Circuit-Level Modeling, Design, and Optimization for Digital Systems
Circuit-level design and modeling of gates, storage, and interconnect. Emphasis on understanding physical aspects which drive energy, delay, area, and noise in digital circuits. Impact of physical effects on design and achievable performance.
Course usually offered in fall term
Prerequisites: ESE 150, ESE 215
Activity: Lecture
1 Course Unit
ESE 400 Engineering Economics
This course investigates methods of economic analysis for decision making among alternative courses of action in engineering applications. Topics include: cost-driven design economics, break-even analysis, money-time relationships, rates of return, cost estimation, depreciation and taxes, foreign exchange rates, life cycle analysis, benefit-cost ratios, risk analysis, capital financing and allocation, and financial statement analysis. Case studies apply these topics to actual engineering problems. One term course offered either term
Also Offered As: ESE 540
Prerequisite: Knowledge of Differential Calculus
Activity: Lecture
1 Course Unit

ESE 407 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly "bottom-up" approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered. One term course offered either term
Also Offered As: ESE 507
Prerequisite: ESE 301 or equivalent
Activity: Lecture
1 Course Unit
Notes: Course open to Seniors in SEAS and Wharton

ESE 419 Analog Integrated Circuits
Design of analog circuits and subsystems using primarily MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor class AB output stages. The Cadence Design System will be used to capture schematics and run simulations using Spectre for some homework problems and for the course project. Topics of stability, noise, device matching through good layout practice will also be covered. Students who take ESE419 will not be able to take ESE572 later. More will be expected of ESE572 students in the design project.
Course usually offered in fall term
Also Offered As: ESE 572
Prerequisite: ESE 319 or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 420 Agent-Based Modeling and Simulation
Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-ifs about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior - consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science. The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems.
Course usually offered in fall term
Also Offered As: ESE 520
Activity: Lecture
1 Course Unit

ESE 421 Control For Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called "self-driving cars." The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling; controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data.
One term course offered either term
Also Offered As: MEAM 421
Prerequisite: CIS 110 or CIS 120 or ENGR 105; ESE 210 or ESE 215 or MEAM 211 or permission of the instructor
Activity: Lecture
1.5 Course Unit

ESE 444 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.
Two terms. student may enter either term.
Also Offered As: ESE 544
Prerequisite: ESE 304 or equivalent
Activity: Lecture
1 Course Unit
ESE 450 Senior Design Project I - EE and SSE
This is the first of a two-semester sequence in electrical and systems engineering senior design. Student work will focus on project/team definition, systems analysis, identification alternative design strategies and determination (experimental or by simulation) or specifications necessary for a detailed design. Project definition is focused on defining a product prototype that provides specific value to a least one identified user group. Students will receive guidance on preparing professional written and oral presentations. Each project team will submit a project proposal and two written project reports that include coherent technical presentations, block diagrams and other illustrations appropriate to the project. Each student will deliver two formal Powerpoint presentations to an audience comprised of peers, instructors and project advisors. During the semester there will be periodic individual/team project reviews.
Course usually offered in fall term
Prerequisite: Senior Standing or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 451 Senior Design Project II - EE and SSE
This is the second of a two term sequence in electrical and systems engineering senior design. Student work will focus on completing the product prototype design undertaken in ESE 450 and successfully implementing the said product prototype. Success will be verified using experimental and/or simulation methods appropriate to the project that test the degree to which the project objectives are achieved. Each project team will prepare a poster to support a final project presentation and demonstration to peers, faculty and external judges. The course will conclude with the submission of a final project written team report. During the semester there will be periodic project reviews with individual teams.
Course usually offered in spring term
Prerequisite: ESE 450
Activity: Lecture
1 Course Unit

ESE 460 Principles of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course usually offered in fall term
Also Offered As: ESE 574, MEAM 564
Prerequisites: Any of the following: ESE 218, MEAM 333, CBE 351, PHYS 250 or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 500 Linear Systems Theory
This graduate-level course focuses on continuous and discrete n-dimensional linear systems with m inputs and p outputs in a time domain based on linear operators. The course covers general discussions of linear systems such as, linearization of non-linear systems, existence and uniqueness of state equation solutions, transition matrices and their properties, methods for computing functions of matrices and transition matrices and state variable changes. It also includes z-transform and Laplace transform methods for time-invariant systems and Floquet decomposition methods for periodic systems. The course then moves to stability analysis, including: uniform stability, uniform exponential stability, asymptotic stability, uniform asymptotic stability, Lyapunov transformations, Lyapunov stability criteria, eigenvalues conditions and input-output stability analysis. Applications involving the topics of controllability, observability, realizability, minimal realization, controller and observer forms, linear feedback, and state feedback stabilization are included, as time permits.
Course usually offered in fall term
Prerequisites: Open to graduates and undergraduates who have taken undergraduate courses in linear algebra and differential equations.
Activity: Lecture
1 Course Unit

ESE 501 Networking - Theory and Fundamentals
Networks constitute an important component of modern technology and society. Networks have traditionally dominated communication technology in form of communication networks, distribution of energy in form of power grid networks, and have more recently emerged as a tool for social connectivity in form of social networks. In this course, we will study mathematical techniques that are key to the design and analysis of different kinds of networks. First, we will investigate techniques for modeling evolution of networks. Specifically, we will consider random graphs (all or none connectivity, size of components, diameters under random connectivity), small world problem, network formation and the role of topology in the evolution of networks. Next, we will investigate different kinds of stochastic processes that model the flow of information in networks. Specifically, we will develop the theory of markov processes, renewal processes, and basic queueing, diffusion models, epidemics and rumor spreading in networks.
Course usually offered in spring term
Prerequisite: ESE 530 or equivalent
Activity: Lecture
1 Course Unit

ESE 502 Introduction to Spatial Analysis
The course is designed to introduce students to modern statistical methods for analyzing spatial data. These methods include nearest-neighbor analyses of spatial point patterns, variogram and kriging analyses of continuous spatial data, and autoregression analyses of area data. The underlying statistical theory of each method is developed and illustrated in terms of selected GIS applications. Students are also given some experience with ARCGIS, JMP, and MATLAB software.
Course usually offered in spring term
Prerequisite: ESE 302 or equivalent
Activity: Lecture
1 Course Unit

ESE 503 Sim Moding & Analysis
Course usually offered in spring term
Activity: Lecture
1 Course Unit
ESE 504 Introduction to Optimization Theory
The course provides a detailed introduction to linear and nonlinear optimization analysis as well as integer optimization analysis. It discusses methods for the mathematical formulation of linear programming (LP) integer programming (IP) and nonlinear programming (NLP) problems, as well as methods of computational tools used for their solutions. In discussions surrounding the solutions to LP problems, the Simplex method and the Revised Simplex methods are covered in a fairly rigorous fashion along with the LINDO computational computer package. Sensitivity analysis associated with the optimal solutions to LP problems is also discussed in detail using both geometric and algebraic methods. In discussions surrounding the solutions to IP problems, the course covers: (a) branch and bound, (b) enumeration and (c) cutting-plane methods, and these are applied to numerous classic problems in IP. In discussions surrounding the solutions to NLP problems, the course covers methods involving: (a) differential Calculus, (b) steepest ascent and descent and (c) Lagrange Multipliers. The Kuhn-Tucker Conditions are also presented and applied to problems in Quadratic Programming. Many examples are selected from a broad range of engineering and business problems.
Course usually offered in fall term
Also Offered As: OIDD 910
Prerequisites: ESE 304 and EAS 205 or MATH 313
Activity: Lecture
1 Course Unit

ESE 505 Control of Systems
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.
Course usually offered in spring term
Also Offered As: MEAM 513
Prerequisites: ESE 224 or equivalent, ESE 210 recommended
Activity: Lecture
1 Course Unit

ESE 507 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly “bottom-up” approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
One term course offered either term
Also Offered As: ESE 407
Activity: Lecture
1 Course Unit
Notes: Course open to Graduate Students in SEAS and Wharton

ESE 510 Electromagnetic and Optical Theory
This course reviews electrostatics, magnetostatics, electric and magnetic materials, induction, Maxwell’s equations, potentials and boundary-value problems. Topics selected from the areas of wave propagation, wave guidance, antennas, and diffraction will be explored with the goal of equipping students to read current research literature in electromagnetics, microwaves, and optics.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ESE 512 Dynamical Systems for Engineering and Biological Applications
This midlevel course in nonlinear dynamics focuses on the analysis of low dimensional, continuous time models for describing and understanding complex behavior in physical, biological and engineered systems. We assume some background knowledge of ordinary differential equations, and develop at an engineering applications level the concepts and tools of qualitative dynamical systems theory with major focus on analysis and some on synthesis.
Course usually offered in fall term
Prerequisites: MATH 240, PHYS 150, ESE 210 and a sound background in computational modeling
Activity: Lecture
1 Course Unit

ESE 516 IoT Edge Computing
This course was developed to bring lessons learned from the product design industry into the classroom - specifically focusing on Internet of Things (IoT) device development and deployment. To achieve the highest level of knowledge transfer, the course will incorporate device design theory with discussions of real-world product failures and successes - as well as a heavy hands-on component to build a device from end to end. Students will learn to use industry standard tools, such as Altium, Atmel Studio, and IBM Watson - allowing them the same level of power and customization at the disposable of startups and Fortune 500 companies alike.
One term course offered either term
Prerequisite: ESE 519 or permission of the instructor
Activity: Lecture
1 Course Unit
ESE 518 Battery and Super-Capacitor Systems
This is a senior/graduate course on scientific and technological fundamentals as they apply to electrochemical batteries and super-capacitors. The perspective utilized will be a combination of materials and systems science. The course will introduce the student to the different categories of electrochemical cells and batteries, and their related chemistry, kinds of super-capacitors, charging and discharging profiles, equivalent series resistance (ESR), power capacities, and lifetimes. For super-capacitors, the student will be introduced to double layer capacitance (DLC) and pseudo-capacitance types of energy storage, super-capacitor fundamentals through Faradaic and non-Faradaic processes, pseudo-capacitance of metal oxides and electro-active polymers (EAPs), non-ideal polarizable electrodes, energetics and kinetics of electrode processes, theories of dielectric polarization, inorganic and organic electrol carbonaceous materials, effective surface area (ESA) and functionalizations, as well as the AC impedance behavior of batteries and super-capacitors including the self-discharge characteristics of both. The fundamental electrochemical relations will be discussed, as well as battery/super-caps system modeling, and batteries management systems.
One-term course offered either term
Prerequisites: CHEM 101 (General Chemistry) and MATH 104 (Calculus 1)
Activity: Lecture
1 Course Unit

ESE 519 Real-Time Embedded Systems
The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring, to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given.
One-term course offered either term
Also Offered As: IPD 519
Prerequisites: CIS 120, ESE 350 or equivalent, one course in computer networks and Senior or Graduate standing
Activity: Lecture
1 Course Unit

ESE 520 Agent-Based Modeling and Simulation
Agents are a new technique for trying to model, simulate, and understand systems that are ill-structured and whose mathematics is initially unknown and possibly unknowable. This approach allows the analyst to assemble models of agents and components where micro-decision rules may be understood; to bring the agents and components together as a system where macro-behavior then emerges; and to use that to empirically probe and improve understanding of the whole, the interrelations of the components, and synergies. This approach helps one explore parametrics, causality, and what-ifs about socio-technical systems (technologies that must support people, groups, crowds, organizations, and societies). It is applicable when trying to model and understand human behavior - consumers, investors, passengers, plant operators, patients, voters, political leaders, terrorists, and so on. This course will allow students to investigate and compare increasingly complex agent based paradigms along three lines - math foundations, heuristic algorithms/knowledge representations, and empirical science.
The student will gain a toolbox and methodology for attempting to represent and study complex socio-technical systems. Students taking this for graduate credit will also learn how to design agent-based tools.
Course usually offered in fall term
Also Offered As: ESE 420
Activity: Lecture
1 Course Unit

ESE 521 The Physics of Solid State Energy Devices
An advanced undergraduate course or graduate level course on the fundamental physical principles underlying the operation of traditional semiconductor electronic and optoelectronic devices and extends these concepts to novel nanoscale electronic and optoelectronic devices. The course assumes an undergraduate level understanding of semiconductors physics, as found in ESE 218 or PHYS 240. The course builds on the physics of solid state semiconductor devices to develop the operation and application of semiconductors and their devices in energy conversion devices such as solar photovoltaics, thermophotovoltaics, and thermoelectrics, to supply energy. The course also considers the importance of the design of modern semiconductor transistor technology to operate at low-power in CMOS.
Course usually offered in spring term
Prerequisites: ESE 218 or PHYS 240 or equivalent, or by permission of the instructor.
Activity: Lecture
1 Course Unit
ESE 523 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials science.
Course usually offered in spring term
Prerequisites: One semester of quantum mechanics, e.g. PHYS 411, MSE 570, CHEM 523, or by permission of the instructor
Activity: Lecture
1 Course Unit

ESE 525 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustenance of current approaches, and for the development of revolutionary designs and applications.
Course usually offered in fall term
Also Offered As: MSE 525
Prerequisites: ESE 218 or PHYS 240 or MSE 220 or equivalent, or by permission.
Activity: Lecture
1 Course Unit

ESE 526 Photovoltaic Systems Engineering
This course will present the engineering basis for photovoltaic (PV) system design. The overall aim is for engineering students to understand what, why, and how associated with the electrical, mechanical, economic, and aesthetic aspects of PV system. The course will introduce additional practical design considerations, added to the theoretical background, associated with pertinent electro-mechanical design.
Course usually offered in spring term
Prerequisite: Permission of the Instructor
Activity: Lecture
1 Course Unit

ESE 527 Design of Smart Systems
Smart systems are materials, structures, devices and/or networks that seek to autonomously emulate human capabilities (sensing, nervous system, deliberating, acting) for adapting and continued functioning in potentially adverse conditions. Smart systems are a highly trans-disciplinary field that utilize microsystems technology with other disciplines like biology, information science, nanoscience, or cognitive science to control networks of components. Smart systems are causing a sea-change in hybrid cyber-physical-social systems leading to such breakthroughs as: the internet of Everything, smart cars, smart cities, the next industrial revolution, solutions to reduce global warming, and personalized e-healthcare, among many others. In this course students explore state-of-the-art smart system components, learn a design methodology to integrate the components, and apply the methodology to design and simulate a smart system prototype. The course will also cover life-long coping skills for human-centered design and for modeling the security, privacy and reliability hazards of the smart systems approach.
Course usually offered in spring term
Prerequisites: Junior or Senior standing, course or experience in a course with high level language
Activity: Lecture
1 Course Unit

ESE 528 Estimation and Detection Theory
Statistical decision making constitutes the core of multiple engineering systems like communication, networking, signal processing, control, market dynamics, biological systems, data processing, etc. We strive to introduce mathematical theories that formulate statistical decision and obtain decision making algorithms with application to one or more of the above domains. This course will be offered every other year.
One-term course offered either term
Prerequisite: ESE 530 or equivalent
Activity: Lecture
1 Course Unit
ESE 530 Elements of Probability Theory
This rapidly moving course provides a rigorous development of fundamental ideas in probability theory and random processes. The course is suitable for students seeking a rigorous graduate level exposure to probabilistic ideas and principles with applications in diverse settings. The topics covered are drawn from: abstract probability spaces; combinatorial probabilities; conditional probability; Bayes's rule and the theorem of total probability; independence; connections with the theory of numbers, Borel's normal law; rare events, Poisson laws, and the Lovasz local lemma; arithmetic and lattice distributions arising from the Bemoulli scheme; limit laws and characterizations of the binomial and Poisson distributions; continuous distributions in one and more dimensions; the uniform, exponential, normal, and related distributions; random variables, distribution functions; orthogonal and stationary random processes; the Gaussian process, Brownian motion; random number generation and statistical tests of randomness; mathematical expectation and the Lebesgue theory; expectations of functions, moments, convolutions; operator methods and distributional convergence, the central limit theorem, selection principles; conditional expectation; tail inequalities, concentration convergence in probability and almost surely, the law of large numbers, the law of the iterated logarithm; Poisson approximation, Janson's inequality, the Stein- Chen method; moment generating functions, renewal theory; characteristic functions.
Course usually offered in fall term
Prerequisites: A solid foundation in undergraduate probability at the level of ESE 301 or STAT 430 at Penn. Students are expected to have a sound calculus background in the first two years of a typical undergraduate engineering curriculum. Undergraduates are warned that the course is very mathematical in nature with an emphasis on rigor; upperclassmen who wish to take the course will need to see the instructor for permission to register.
Activity: Lecture
1 Course Unit

ESE 531 Digital Signal Processing
This course covers the fundamentals of discrete-time signals and systems and digital filters. Specific topics covered include: review of discrete-time signal and linear system representations in the time and frequency domain, and convolution; discrete-time Fourier transform (DTFT); Z-transforms; frequency response of linear discrete-time systems; sampling of continuous-time signals, analog to digital conversion, sampling-rate conversion; basic discrete-time filter structures and types; finite impulse response (FIR) and infinite impulse response (IIR) filters; design of FIR and IIR filters; discrete Fourier transform (DFT), the fast Fourier transform (FFT) algorithm and its applications in filtering and spectrum estimation.
Course usually offered in fall term
Prerequisites: ESE 224, ESE 325 or equivalent
Activity: Lecture
1 Course Unit

ESE 532 System-on-a-Chip Architecture
Motivation, design, programming, optimization, and use of modern System-on-a-Chip (SoC) architectures. Hands-on coverage of the breadth of computer engineering within the context of SoC platforms from gates to application software, including on-chip memories and communication networks, I/O interfacing, RTL design of accelerators, processors, concurrency, firmware and OS/infrastructure software. Formulating parallel decompositions, hardware and software solutions, hardware/ software tradeoffs, and hardware/software codesign. Attention to real-time requirements.
Course usually offered in fall term
Prerequisites: Undergraduates: CIS 240, ESE 350; Graduate: Working knowledge of C
Activity: Lecture
1 Course Unit

ESE 534 Computer Organization
Organization and design of physical computational systems, basic building block for computations, understanding and exploiting structure in computational problems, design space, costs, and tradeoffs in computer organization, common machine abstractions, and implementation/optimization techniques. The course will develop fundamental issues and tradeoffs which define computer organizational and architectural styles including RISC, VLIW, Super Scalar, EPIC, SIMD, Vector, MIMD, reconfigurable FPGA, PIM, and SoC. Basic topics in the design of computational units, instruction organization, memory systems, control and data flow, and interconnect will also be covered.
Course not offered every year
Prerequisites: Basic computability and basic digital circuits, VLSI exposure helpful but not required. CIS 371 adequate.
Activity: Lecture
1 Course Unit

ESE 535 Electronic Design Automation
Formulation, automation, and analysis of design mapping problems with emphasis on VLSI and computational realizations. Major themes include: formulating and abstracting problems, figures of merit (e.g. Energy, Delay, Throughput, Area, Mapping Time), representation, traditional decomposition of flow (logic optimization, covering, scheduling, retiming, assignment, partitioning, placement, routing), and techniques for solving problems (e.g., greedy, dynamic programming, search, (integer) linear programming, graph algorithms, randomization, satisfiability).
Course not offered every year
Prerequisites: Digital logic, Programming (need to be comfortable writing ~1-3K lines of code and working with a large, existing base code).
Activity: Lecture
1 Course Unit

ESE 536 Nanofabrication and Nanocharacterization
This course is intended for first year graduate students interested in the experimental practice of nanotechnology. In the context of a hands-on laboratory experience, students will gain familiarity with both top-down and bottom-up fabrication and characterization technologies. This will be achieved through the realization of a variety of micro- and nanoscale structures and devices that can exhibit either classical or quantum effects at the small scale. Although concepts relevant to the laboratories will be emphasized in lecture, it is expected that students will already have been exposed to many of the underlying theoretical concepts of nanotechnology in previous courses.
Course usually offered in fall term
Prerequisite: ESE 525 or MSE 525 or permission of the instructor
Activity: Lecture
1 Course Unit
ESE 540 Engineering Economics
This course is cross-listed with an advanced-level undergraduate course (ESE 400). Topics include: money-time relationships, discrete and continuous compounding, equivalence of cash flows, internal and external rate of return, design and production economics, life cycle cost analysis, depreciation, after-tax cash flow analysis, cost of capital, capital financing and allocation, parametric cost estimating models, pricing, foreign exchange rates, stochastic risk analysis, replacement analysis, benefit-cost analysis, and analysis of financial statements. Case studies apply these topics to engineering systems. Students are not required to do additional work compared to ESE 400 students. The work-load is identical.
One term course offered either term
Also Offered As: ESE 400
Activity: Lecture
1 Course Unit

ESE 543 Human Systems Engineering
This course is an introduction to human systems engineering, examining the various human factors that influence the spectrum of human performance and human systems integration. We will examine both theoretical and practical applications, emphasizing fundamental human cognitive and performance issues. Specific topics include: human performance characteristics related to perception, attention, comprehension, memory, decision making, and the role of automation in human systems integration.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ESE 544 Project Management
The course emphasizes a systems engineering approach to project management including the cycle costing and analysis, project scheduling, project organization and control, contract management, project monitoring and negotiations. In addition, the course will also examine management issues in large infrastructure projects like non-recourse or limited recourse project financing. Examples from the logistics planning process and global software project management will be used to highlight the course topics.
One term course offered either term
Also Offered As: ESE 444
Prerequisite: ESE 304 or equivalent
Activity: Lecture
1 Course Unit

ESE 545 Data Mining: Learning from Massive Datasets
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, students will learn to apply, analyze and evaluate principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.
Course usually offered in fall term
Prerequisites: ESE 530, ENM 503, or equivalent
Activity: Lecture
1 Course Unit

ESE 548 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results.
One-term course offered either term
Also Offered As: CPLN 650
Prerequisite: CPLN 505 or another planning statistics course
Activity: Lecture
1 Course Unit

ESE 550 Advance Transportation Seminar, Air Transportation Planning
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lecturers, case studies of airport development and an individual group and research project.
Course usually offered in spring term
Also Offered As: CPLN 750
Prerequisite: CPLN 550 or equivalent
Activity: Seminar
1 Course Unit

ESE 556 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are coupled together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry.
One term course offered either term
Also Offered As: BE 566
Prerequisites: Graduate standing or permission of the instructor.
Experience with Linear Algebra and MATLAB.
Activity: Lecture
1 Course Unit
ESE 567 Risk Analysis and Environmental Management
This course is designed to introduce students to the complexities of making decisions about threats to human health and the environment when people's perceptions of risks and their decision-making processes differ from expert views. Recognizing the limitations of individuals in processing information the course explores the role of techniques such as decision analysis, cost-benefit analysis, risk assessment and risk perception in structuring risk-management decisions. We will also examine policy tools such as risk communication, incentive systems, third party insurance, inspection and regulation in different problem contexts. The problem contexts for studying the interactions between analysis, perceptions, and communication will include risk-induced stigmatization of products (e.g. alar, British beef), places (e.g. Love Canal), and technologies (e.g. nuclear power); the siting of noxious facilities, radon, managing catastrophic risks including those from terrorism. A course project will enable students to apply the concepts discussed in the course to a concrete problem.
Course usually offered in spring term
Also Offered As: OID 261
Activity: Lecture
1 Course Unit

ESE 568 Mixed Signal Design and Modeling
This course will introduce design and analysis of mixed-signal integrated circuits. Topics include: Sampling and quantization, Sampling circuits, Switched capacitor circuits and filters, Comparators, Offset compensation, DACs/ADCs (flash, delta-sigma, pipeline, SAR), Oversampling, INL/DNL, FOM. The course will end with a final design project using analysis and design techniques learned in the course. Students must provide a written report with explanations to their design choices either with equations or simulation analysis/insight along with performance results.
One-term course offered either term
Prerequisites: ESE 319, 419 or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 570 Digital Integrated Circuits and VLSI - Fundamentals
Explores the design aspects involved in the realization of an integrated circuit from device up to the register/subsystem level. It addresses major design methodologies with emphasis placed on the structured design. The course includes the study of MOS device characteristics, the critical interconnect and gate characteristics which determine the performance of VLSI circuits, and NMOS and CMOS logic design. Students will use state-of-the-art CAD tools to verify designs and develop efficient circuit layouts.
Course usually offered in spring term
Prerequisite: ESE 319 (for undergraduates) or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 572 Analog Integrated Circuits
Design of analog circuits and subsystems using bipolar and MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor arrays, and class AB output stages. The course will include a design project of an analog circuit. The course will use the Cadence Design System for schematic capture and simulation with Spectre circuit simulator. This course is similar to ESE 570, except that it will not require the use of the physical layout tools associated with VLSI design and implementation.
Course usually offered in fall term
Also Offered As: ESE 419
Prerequisite: ESE 319 (for undergraduates) or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 574 The Principles and Practice of Microfabrication Technology
A laboratory-based course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lectures discuss: clean room procedures; microelectronic and microstructural materials; photolithography; diffusion, oxidation; materials deposition; etching and plasma processes. Basic laboratory processes are covered for the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course usually offered in fall term
Also Offered As: ESE 460, MEAM 564
Prerequisites: Any of the following courses: ESE 218, MSE 321, MEAM 333, CBE 351, PHYS 250 or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 576 Digital Communication Systems
Course usually offered in spring term
Prerequisites: Undergraduate linear systems, probability, random processes.
Activity: Lecture
1 Course Unit

ESE 578 RFIC (Radio Frequency Integrated Circuit) Design
Introduction to RF (Radio Frequency) and Microwave Theory, Components, and Systems. The course aims at providing knowledge in RF transceiver design at both microwave and millimeter-wave frequencies. Both system and circuit level perspective will be addressed, supported by modeling and simulation using professional tools (including Agilent ADS, Sonnet, and Cadence Design Systems). Topics include: Transmission Line Theory, S-parameters, Smith Chart for matching network design, stability, noise, and mixed signal design. RF devices covered will include: hybrid/Wilkinson/Lange 3dB couplers, Small Signal Amplifiers (SSA), Low Noise Amps (LNA), and Power Amps (PA). CMOS technology will be largely used to design the devices mentioned.
Course usually offered in spring term
Prerequisite: ESE 572
Activity: Lecture
1 Course Unit
ESE 590 Systems Methodology
This course covers the methodologies and techniques important to designing large complex, purposeful systems and to discovering policies that influence them throughout the stages of their lifecycle. The course focuses on hands-on synthetic thinking, where students assemble the big picture from modeling the individual actors, organizations, and artifacts in a socio-technical system of interest. This is the study of emergence of macro-behavior from the micro-decision making of the actors involved - to inquire into the design of a purposeful system, and to examine alternative futures that are ideal, yet affordable, sustainable, and workable. Specifically, the student learns systems theory, systems methodologies (design inquiry/learning systems, idealized design/interactive planning, and soft systems methodology/knowledge management), bottom up modeling (decision science, multi-attribute utility theory, affective reasoning, agent based modeling, simulated societies), and how to further research and apply the synthetic paradigm. Course usually offered in spring term
Activity: Lecture
1 Course Unit

ESE 597 Master’s Thesis
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

ESE 599 Independent Study for Master’s credit
One-term course offered either term
Activity: Independent Study
1 Course Unit

ESE 605 Modern Convex Optimization
This course concentrates on recognizing and solving convex optimization problems that arise in engineering. Topics include: convex sets, functions, and optimization problems. Basis of convex analysis. Linear, quadratic, geometric, and semidefinite programming. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods, ellipsoid algorithm and barrier methods, self-concordance. Applications to signal processing, control, digital and analog circuit design, computation geometry, statistics, and mechanical engineering. Course usually offered in spring term
Prerequisites: Knowledge of linear algebra and willingness to do programming. Exposure to numerical computing, optimization, and application fields is helpful but not required.
Activity: Lecture
1 Course Unit

ESE 610 Electromagnetic and Optical Theory II
This course covers exact, approximate and numerical methods of wave propagation, radiation, diffraction and scattering with an emphasis on bringing students to a point of contributing to the current research literature. Topics are chosen from a list including analytical and numerical techniques, waves in complex media and metamaterials, photonic bandgap structures, imaging, miniaturized antennas, high-impedance ground plans, and fractal electrodynamics.
Course not offered every year
Activity: Lecture
1 Course Unit

ESE 611 Nanophotonics: Light at the Nanoscale
This course is intended for first and second year graduate students interested in nanoscale optics and photonics. Building on prior coursework in electromagnetism, this course provides a theoretical foundation and up-to-date survey of the key principles and phenomena relevant to the field of nanophotonics. Topics discussed include light-matter interaction through Maxwell’s equations, photonic band theory and photonic crystals, plasmonic structures and devices, metamaterials and metasurfaces, PT-symmetric & topological photonic systems. Applications of nanophotonic devices and principles to a wide range of scenarios will also be explored in depth, including for renewable energy, information processing, imaging and sensing. Experimental techniques used in nanophotonics will be concurrently introduced and discussed. One term course offered either term
Prerequisite: ESE 510 recommended or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 617 Non-Linear Control Theory
The course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Frobenius’ theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations. Course not offered every year
Also Offered As: CBE 617, CIS 613, MEAM 613
Prerequisite: ESE 500 or equivalent
Activity: Lecture
1 Course Unit

ESE 619 Model Predictive Control
Increased system complexity and more demanding performance requirements have rendered traditional control laws inadequate regardless if simple PID loops are considered or robust feedback controllers designed according to some H2/Infinity criterion. Applications ranging from the process industries to the automotive and the communications sector are making increased use of Model Predictive Control (MPC) where a fixed control law is replaced by on-line optimization performed over a receding horizon. The advantage is that MPC can deal with almost any time-varying process and specifications, limited only by the availability of real-time computer power. In the last few years we have seen tremendous progress in this interdisciplinary area where fundamentals of systems theory, computation and optimization interact. For example, methods have emerged to handle hybrid systems, i.e. systems comprising both continuous and discrete components. Also, it is now possible to perform most of the computations off-line thus reducing the control law to a simple look-up table.
Course usually offered in fall term
Prerequisites: Linear Algebra (ESE 500), Optimization (ESE 504 or ESE 605)
Activity: Lecture
1 Course Unit
ESE 621 Nanoelectronics
This is a graduate level course on fundamental operating principles and physics of semiconductor devices in reduced or highly scaled dimensions. The course will include topics and concepts covering basic quantum mechanics and solid state physics of nanoscale devices as well as device transport and characterization, materials and fabrication. A basic knowledge of semiconductor physics and devices is assumed. The course will build upon basic quantum mechanics and solid state physics concepts to understand the operation of nanoscale semiconductor devices and physics of electrons in confined dimensions. The course will also provide a historical perspective on micro and nanoelectronics, discuss the future of semiconductor computing technologies, cutting edge research in nanomaterials, device fabrication as well as provide a perspective on materials and technology challenges.
One term course offered either term
Prerequisite: ESE 521 or permission of the instructor
Activity: Lecture
1 Course Unit

ESE 635 Distributed Systems
This research seminar deals with tools, methods, and algorithms for analysis and design of distributed dynamical systems. These are large collections of dynamical systems that are spatially interconnected to form a collective task or achieve a global behavior using local interactions. Over the past decade such systems have been studied in disciplines as diverse as statistical physics, computer graphics, robotics, and control theory. The purpose of this course is to build a mathematical foundation for study of such systems by exploring the interplay of control theory, distributed optimization, dynamical systems, graph theory, and algebraic topology. Assignments will consist of reading and researching the recent literature in this area. Topics covered in distributed coordination and consensus algorithms over networks, coverage problems, effects of delay in large scale networks. Power law graphs, gossip and consensus algorithms, synchronization phenomena in natural and engineered systems, etc.
Course not offered every year
Prerequisites: Basic knowledge of linear systems (ESE 500), linear algebra (MATH 312 or equivalent), and optimization (ESE 504 or equivalent) and some familiarity with basics of nonlinear systems (ESE 617 or equivalent). Students without this background should consult with the instructor before registering.
Activity: Lecture
1 Course Unit

ESE 650 Learning in Robotics
This course will cover the mathematical fundamentals and applications of machine learning algorithms to mobile robotics. Possible topics that will be discussed include probabilistic generative models for sensory feature learning, Bayesian filtering for localization and mapping, dimensionality reduction techniques for motor control, and reinforcement learning of behaviors. Students are expected to have a solid mathematical background in machine learning and signal processing, and will be expected to implement algorithms on a mobile robot platform for their course projects. Grading will be based upon course project assignments as well as class participation.
Course usually offered in fall term
Prerequisites: Students will need permission from the instructor. They will be expected to have a good mathematical background with knowledge of machine learning techniques at the level of CIS 520, signal processing techniques at the level of ESE 531, as well as have some robotics experience.
Activity: Lecture
1 Course Unit

ESE 672 Integrated Communication Systems
This is an advanced radio frequency (RF) circuit design course that includes analysis and design of high-frequency and high-speed integrated communication circuits at both transistor and system levels. Students gradually design and simulate different blocks of an RF receiver and combine these blocks to form the receiver as their final project. We assume some background knowledge of device physics, electromagnetics, circuit theory, control theory, and stochastic processes.
One term course offered either term
Prerequisite: ESE 419 or ESE 572
Activity: Lecture
1 Course Unit

ESE 674 Information Theory
Deterministic and probabilistic information. The pigeon-hole principle. Entropy, relative entropy, and mutual information. Random processes and entropy rate. The asymptotic equipartition property. Optimal codes and data compression. Channel capacity. Source channel coding. The ubiquitous nature of the theory will be illustrated with a selection of applications drawn from among: universal source coding, vector quantization, network communication, the stock market, hypothesis testing, algorithmic computation and kolmogorov complexity, and thermodynamics.
Course not offered every year
Prerequisite: ESE 530 or equivalent exposure to probability theory
Activity: Lecture
1 Course Unit

ESE 676 Coding Theory
Coding theory for telecommunications with emphasis on the algebraic theory of cyclic codes using finite field arithmetic, decoding of BCH and Reed-Solomon codes, finite field Fourier transform and algebraic geometry codes, convolutional codes and trellis decoding algorithms, graph based codes, Berrou codes and Gallager codes, turbo decoding, iterative decoding. And belief propagation.
One term course offered either term
Prerequisites: ESE 224, MATH 240, PHYS 150, Mathematica aptitude.
Activity: Lecture
1 Course Unit

ESE 680 Special Topics in Electrical and Systems Engineering
Advanced and specialized topics in both theory and application areas. Students should check Graduate Group office for offerings during each registration period.
Course not offered every year
Activity: Lecture
1 Course Unit
ESE 895 Teaching Practicum
Participation of graduate students in the teaching mission of the department will help to develop teaching, presentation, leadership, and interpersonal skills while assisting the department in discharging its teaching responsibilities. All doctoral students are required to participate under faculty guidance in the teaching mission of the department. This requirement will be satisfied by completing two 0.5 course units of teaching practicum (ESE 895). Each 0.5 course unit of teaching practicum will consist of the equivalent of 10 hours of effort per week for one semester. As a part of the preparation for and fulfillment of the teaching practicum requirement, the student will attend seminars emphasizing teaching and communication skills, lead recitations, lead tutorials, supervise laboratory experiments, develop instructional laboratories, develop instructional materials and homeworks, laboratory reports, and exams. A teacher training seminar will be conducted the day before the first day of classes of the Fall semester. Attendance is mandatory for all second-year students. As much as possible, the grading aspect of the teaching practicum course will be such as not to exceed 50% of the usual teaching assistant commitment time. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty member responsible for the course. At the completion of every 0.5 course unit of teach, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation by the faculty member responsible for the course. The evaluation will be an important part of the students taking the course and the impressions of the faculty.

One term course offered either term

Energy Management and Policy (ENMG)

ENMG 503 Topics in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy. Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples: Policy Paradox (2011) by Stone, Climate Shock (2015) by Wagner and Weitzman, Power Density (2015) by Smil, Connectography (2016) by Khanna, Climate of Hope (2017) by Bloomberg and Pope, Utility of the Future (2016) by MIT Energy Initiative, Retreat from a Rising Sea (2016) by Pilkey, Pilkey-Jarvis, Pilkey.

Course usually offered in spring term
Also Offered As: CPLN 535
Activity: Seminar
1 Course Unit

ENMG 505 Chokepoints and the Global Energy Systems
This research seminar will explore the movement of energy resources around the world, the physical and economic impact of that oil on these cities and regions, and the opportunities and challenges of these flows in the complex and uncertain energy transition currently underway. The discovery and invention of more concentrated forms of energy during the modern era has generated infrastructures for transporting fuels and transmitting electricity over increasingly large distances. These infrastructures have created landscapes characterized by land use patterns and inter-industry configurations that are massive, expensive, durable and highly specific. They continue to generate great wealth and wages, while also generating externalized climate, environmental, and health costs that are better regulated in some places than in others.

All of these conditions yield policy and design challenges for cities and nations, especially as the world slowly but steadily builds a policy regime for mitigating climate change. The global energy system is a key source of the greenhouse. Emissions driving climate change. As policies are developed and enforce to reduce and eliminate these emissions, these landscapes will change dramatically over the long transition of the next 50 years. How can cities and nations guide that transition with policy and design choices? How can nations use port cities and other elements of the energy landscape to meet their global climate commitments? The seminar will discuss weekly assigned readings and students can expect to read approximately a book a week throughout the semester. Students will write three 1-page papers on weekly readings and lead part of the seminar discussion on those readings. They will submit a 10-page final project in the form of a research agenda that identifies a set of important questions that could help guide policy and design choices facing energy flows and the industries and nations that influence them.

Taught by: Nick Pevzner, Mark Alan Hughes, Cornelia Colijn

EAS 097 Embed Controlled Gardening
A service course intended to integrate concepts of basic physics, biology and electronics and systems engineering for the benefit of Penn engineering students, teachers and students from two minority centered community public schools. The course will engage the participants in the design and implementation of indoors cultivating systems using photo-voltaic (PV) technology to energize LED emulating the needed solar radiation for plant growth, a liquid nutrient distribution system, sensors / actuators capable of selecting the harvestable plants and keeping track of overall system parameters.
One term course offered either term
Activity: Lecture
1 Course Unit

EAS 203 Engineering Ethics
In this course, students will study the social, political, environmental and economic context of engineering practice. Students will develop an analytical toolkit to identify and address ethical challenges and opportunities in the engineering profession, including studies of risk and safety, professional responsibility, and global perspectives.
The course will begin with a foundation in the history of engineering practice and major Western ethical and philosophical theories. Students will then apply this material to both historical case studies, such as Bhopal, the NASA Shuttle Program, and Three Mile Island, as well as contemporary issues in big data, artificial intelligence, and diversity within the profession. Students will consider how engineers, as well as governments, the media, and other stakeholders, address such issues.
One term course offered either term
Activity: Lecture
1 Course Unit

EAS 205 Applications of Scientific Computing.
This course will discuss a number of canonical problems and show how numerical methods are used to solve them. Lectures will introduce the underlying theory and the relevant numerical methods. Students will be expected to implement solutions to the problems using MATLAB.
The course will use the visualization capabilities of MATLAB to provide students with a geometric interpretation of the key ideas underlying the numerical methods. Topics to be covered will include: The solution of systems of linear systems equations with application to problems such as force balance analysis and global illumination computation. Representing and computing coordinate transformations with applications to problems in graphics, vision and robotics. Transform Coding with applications to the analysis of audio signals and image compression. Analysis of variance and the search for low dimensional representations for high dimensional data sets e.g. Google's PageRank algorithm. Least Squares model fitting with applications to data analysis. Analysis of linear dynamical systems with applications to understanding the modes of vibration of mechanical systems. The analysis of stochastic systems governed by state transition matrices.

EAS 301 Climate Policy and Technology
The course will exam Pacala and Socolow's hypothesis that "Humanity already possesses the fundamental scientific, technical and industrial know-how to solve the carbon and climate problem for the next half-century." Fifteen "climate stabilization wedges" i.e., strategies that each have the potential to reduce carbon emissions by 1 billion tons per year by 2054, will be examined in detail. Technology and economics will be reviewed. Socio-political barriers to mass-scale implementation will be discussed. Pacala and Socolow note "Every element in this portfolio has passed beyond the laboratory bench and demonstration project; many are already implemented somewhere at full industrial scale".
One term course offered either term
Also Offered As: EAS 505
Activity: Lecture
1 Course Unit

EAS 306 Electricity and Systems Markets
The course discusses the existing electricity system from technical, economic, and policy perspectives. Basic power system engineering will be reviewed early in the course. Generation, transmission, distribution, and end-use technologies and economics will be discussed. Additional topics will include system operation, industry organization, government regulation, the evolution of power markets, environmental policy, and emerging technologies.
One term course offered either term

EAS 401 Energy and Its Impacts: Technology, Environment, Economics, Sustainability

The objective is to introduce students to one of the most dominating and compelling areas of human existence and endeavor: energy, with its foundations in technology, from a quantitative sustainability viewpoint with its association to economics and impacts on environment and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field, with emphasis on explaining the technological foundation. The course spans from basic principles to applications. A review of energy consumption, use, and resources; environmental impacts, sustainability and design of sustainable energy systems; introductory aspects of energy economics and carbon trading; methods of energy analysis; forecasting; energy storage; electricity generation and distribution systems (steam and gas turbine based power plans, fuel cells), fossil fuel energy (gas, oil, coal) including nonconventional types (shale gas and oil, oil sands, coalbed and tight-sand gas), nuclear energy wastes; brief introduction to renewable energy use: brief introduction to solar, wind, hydroelectric, geothermal, biomass; energy for buildings, energy for transportation (cars, aircraft, and ships); prospects for future energy systems: fusion power, power generation in space. Students interested in specializing in one or two energy topics can do so by choosing them as their course project assignments.

Course usually offered in fall term
Also Offered As: EAS 501
Activity: Lecture
1 Course Unit

Notes: Any University student interested in energy and its impacts, who is a Junior or Senior. Students taking the course as EAS 501 will be given assignments commensurate with graduate standing.

EAS 402 Renewable Energy and Its Impacts: Technology, Environment, Economics, Sustainability

The objective is to introduce students to the major aspects of renewable energy, with its foundations in technology, association to economics, and impacts on ecology and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field. The course spans from basic principles to applications. A review of solar, wind, biomass, hydroelectric, geothermal energy, and prospects for future energy systems such as renewable power generation in space.

Course usually offered in spring term
Also Offered As: EAS 502
Prerequisite: Junior Standing
Activity: Lecture
1 Course Unit

EAS 403 Energy Systems and Policy

This is a survey course that will examine the current U.S. energy industry, from production to consumption, and its impacts on local, regional, and the global environment. The course will seek to provide a fuller understanding of existing energy systems, ranging from technical overviews of each, a review of industry organization, and an exploration of the well-established policy framework each operates within. Near-term demands upon each energy supply system will be discussed, with particular focus on environmental constraints. Policy options facing each energy industry will be reviewed.

EAS 449 Product Development in Entrepreneurial Ventures

A product is any artifact, service or experience for which a buyer is willing to pay. Product Design & Development is at the core of entrepreneurship. Though in modern mythology it is a solitary effort by a passionate individual, entrepreneurship is frequently more successful when pursued in an interdisciplinary environment. Though it rarely requires the greatest time investment, concentration of personnel, the majority of the funding or even the greatest depth of expertise to accomplish, excellent product design can be the difference between a successful and failed venture. A poorly designed "product" can prevent a venture from being successful. An excellently designed product can make a competent business plan much more successful. A well defined and designed product solution will create differentiation, and can not only meet customer expectation but can create desirability. Through the review and discussion of case studies, lecture subjects, guest lecturers, field trips, and a semester long interdisciplinary team project, this class will provide insight into the problem identification and product design processes, user needs research, intellectual property research, experience design, Industrial Design, Interface Design, branding and product centric fundraising processes.

Course usually offered in spring term
Also Offered As: IPD 549
Activity: Lecture

EAS 499 Senior Capstone Project

The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor, and the student's faculty advisor, to the Office of Academic Programs two weeks prior to the start of the term.

EAS 507 Intellectual Property and Business Law for Engineers
Engineers are often on the front line of innovation. The goal of this course is to introduce engineering students to the basics of Intellectual property (IP) and business laws that they will encounter throughout their careers. Understanding these laws is critical for the protection of IP and for the creation and success of high-tech start-up ventures. Market advantage in large part springs from a company’s IP. Without legal protection and correct business formation, proprietary designs, processes, and inventions could be freely used by competitors, ruining market advantage. A basic understanding of IP laws, contractual transactions, employment agreements, business structures, and debt-equity financing will help engineering students to become effective employees or entrepreneurs, to acquire investors, and to achieve success. Though open to students of all disciplines, the course will use case studies particular relevance to students of engineering and applied science.

EAS 510 Technical Communication and Academic Writing for Non-native Speakers of English
Students will improve the grammar, word choice and organization of their professional writing by completing weekly writing assignments and a full-length research paper. Students will also give short oral presentations and receive feedback on pronunciation, wording, grammar and organization.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Graduate students whose native language is English, but who would benefit from a course in Technical Communication, should take EAS 500.
EAS 546 Engineering Entrepreneurship II

This course is the sequel to EAS 545 and focuses on the planning process for a new technology venture. Like its prerequisite, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Whereas EAS 545 investigates the sequential stages of engineering entrepreneurship from the initial idea through the early growth phase of a startup company, EAS 546 provides hands-on experience in developing a business plan for such a venture. Working in teams, students prepare and present a comprehensive business plan for a high-tech opportunity. The course expands on topics from EAS 545 with more in-depth attention to: industry and marketplace analysis; competitive strategies related to high-tech product/service positioning, marketing, development and operations; and preparation of sound financial plans. Effective written and verbal presentation skills are emphasized throughout the course. Ultimately, each team presents its plan to a distinguished panel of recognized entrepreneurs, investors and advisors from the high-tech industry.

EAS 591 Leading Technology Teams

Engineers routinely work in teams collaborating with experts from multiple fields to address increasingly large complex problems/ opportunities. EAS 591, Leading Technology Teams, focuses on the dynamics of innovative, interdisciplinary, cross-functional teams. We examine ways to improve team performance by exploring technology leadership issues from multiple perspectives (i.e., the individual, the team, and the organization). Developing skills to be an effective technology team member, leader, and/or sponsor will provide you with a competitive advantage. not only for getting your first job but also for success throughout your career.

Activity: Lecture
0.5 Course Units
EAS 595 Foundations of Leadership
The goal of EAS 595 is to increase your capacity to effectively lead throughout your career and wherever you find yourself in an organization. This involves understanding and learning about yourself and about working effectively with others. The course starts with an identification of values, strengths, preferences and passions. It then proceeds with the personal and interpersonal and moves through the strategic aspects of leadership by bringing together aspects of management science, social psychology, psychology of personality and behavioral economics. Topics include teamwork and team dynamics, identifying life's goals and dreams, decision making, valuing differences, understanding the dynamics of influence, using power with integrity, giving and receiving feedback, leading change, and discovering where we can make our own contribution.

Engineering (ENGR)

ENGR 101 Introduction to Engineering
This course is intended to introduce students to the field of engineering. It will expose students to the engineering disciplines through hands-on laboratory experiences. In addition, the course will provide tutorials on how to use important software packages as well as a "Professional Preparation" module through studies of communication (writing and speaking skills), ethics, leadership and teamwork. This course is ideal for any freshman interested in exploring the possibility of studying engineering at Penn. The course counts as an engineering requirement in SEAS.

Course usually offered in fall term
Activity: Lecture
1 Course Unit

ENGR 105 Introduction to Scientific Computing
This course will provide an introduction to computation and data analysis using MATLAB - an industry standard programming and visualization environment. The course will cover the fundamentals of computing including: variables, functions, decisions, iteration, and recursion. These concepts will be illustrated through examples and assignments which show how computing is applied to various scientific and engineering problems. Examples will be drawn from the simulation of physical and chemical systems, the analysis of experimental data, Monte Carlo numerical experiments, image processing, and the creation of graphical user interfaces. This course does not assume any prior programming experience but will make use of basic concepts from calculus and Newtonian physics.
Activity: Lecture
1 Course Unit

ENGR 212 Concepts in Micro- and Nanotechnology
Seminar/Lecture course on micro- and nanotechnology intended for nonspecialists. This course will discuss how very small structures and devices, as well as systems comprising these devices, are fabricated and characterized, with application examples from microelectronics, microelectromechanical systems, and quantum devices and systems. Current societal and ethical implications of micro- and nanotechnology, as well as creation and exploitation of commercial opportunities, will be discussed.

One term course offered either term
Prerequisites: Math 104 and Physics 93/140 (or higher), or permission of the instructor
Activity: Lecture
1 Course Unit

ENGR 250 Energy Systems, Resources and Technology
The course will present a comprehensive overview of the global demand for energy, and the resource availability and technology used in its current and future supply. Through a personal energy audit, students will be made aware of the extensive role that energy plays in modern life, both directly, through electricity and transportation fuel, and indirectly in the manufacturing of goods they use. The course will cover how that energy is supplied, the anticipated global growth in energy demand, the resource availability and the role of science and technology in meeting that demand in a world concerned about climate change. The roles of conservation, improved efficiency and renewable energy in meeting future demand in a sustainable, environmentally benign way will be covered.

ENGR 503 Engineering in Oil, Gas and Coal, from Production to End Use
While conventional wisdom is that the world is running out of fossil fuels, technical advances such as deep water production, directional drilling, hydraulic fracturing, and refining of non-conventional crude oil sources has increased the resource base significantly and there are well over 100 years of reserves of oil, natural gas and coal. The effect of technology advances has been most profound in the United States, where net energy imports are projected to fall to 12% of consumption by 2020. Excellent, highly technical careers are available in these industries, with opportunities to reduce their impact on the environment and in particular on climate change. The course will cover engineering technology in oil, natural gas and coal from production through end use. It will equip graduating students with the knowledge to contribute in these industries and to participate in informed debate about them.

Activity: Lecture
1 Course Unit
ENGR 504 Fundamental Concepts in Nanotechnology
This is a Master's level course that seeks to teach the physics needed to begin a study of engineering and science at the nanometer scale. Since the nanometer scale is so close to the quantum scale, much of the course deals with an introduction to quantum mechanics but the course also includes discussions in solid-state physics, electricity and magnetism and mechanics. The objective of the course is to teach the physics that an engineering student would need to have in order to do experimental work at the nanometer scale. In addition, this course will prepare the student to take more advanced courses in the Nanotechnology Program.

Engineering Mathematics (ENM)

ENM 240 Differential Equations and Linear Algebra
This course discusses the theory and application of linear algebra and differential equations. Emphasis is placed on building intuition for the underlying concepts and their applications in engineering practice along with tools for solving problems. We will also use computer simulations in MATLAB to augment this intuition.
One term course offered either term
Prerequisite: Math 114 or equivalent
Activity: Lecture
1 Course Unit

ENM 251 Analytical Methods for Engineering
This course introduces students to physical models and mathematical methods that are widely encountered in various branches of engineering. Illustrative examples are used to motivate mathematical topics including ordinary and partial differential equations, Fourier analysis, eigenvalue problems, and stability analysis. Analytical techniques that yield exact solutions to problems are developed when possible, but in many cases, numerical calculations are employed using programs such as Matlab and Maple. Students will learn the importance of mathematics in engineering.
Course usually offered in spring term
Prerequisites: MATH 240 or equivalent along with sophomore standing in SEAS, or permission of the instructor(s)
Activity: Lecture
1 Course Unit

ENM 321 Engineering Statistics
This is a first course in applied statistics and probability for students in engineering. The course covers basic concepts of probability, discrete and continuous random variables, probability distributions, data description techniques, random samples, estimations, hypothesis testing, regression, and statistical quality control.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ENM 360 Introduction to Data-driven Modeling
From recognizing voice, text or images to designing more efficient airplane wings and discovering new drugs, machine learning is introducing a transformative set of tools in data analysis with increasing impact across engineering, sciences, and commercial applications. In this course, you will learn about principles and algorithms for extracting patterns from data and making effective automated predictions. We will cover concepts such as regression, classification, density estimation, feature extraction, sampling and probabilistic modeling, and provide a formal understanding of how, why, and when these methods work in the context of analyzing physical, biological, and engineering systems.
One term course offered either term
Prerequisites: ENGR 105, MATH 240, basic programming
Activity: Lecture
1 Course Unit

ENM 375 Biological Data Science I - Fundamentals of Biostatistics
The goal of this course is to equip bioengineering undergraduates with fundamental concepts in applied probability, exploratory data analysis and statistical inference. Students will learn statistical principles in the context of solving biomedical research problems.
Course usually offered in spring term
Prerequisites: Sophomores and Juniors only.
Activity: Lecture
1 Course Unit

ENM 427 Finite Elements and Applications
The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the Heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hands-on experience with the multiphysics, finite element package FemLab.
Course usually offered in fall term
Also Offered As: MEAM 527
Prerequisites: MATH 241 or ENM 251 and PHYS 151
Activity: Lecture
1 Course Unit

ENM 502 Numerical Methods and Modeling
This course provides an advanced introduction to various numerical methods for solving systems of algebraic equations (linear and non-linear) and differential equations (ordinary and partial). Techniques covered include Newton's method, implicit and explicit time stepping, and the finite difference and finite element methods. The MATLAB software package will be used to implement the various methods and execute representative calculations.
Course usually offered in spring term
Prerequisites: Basic knowledge of a computer programming language; MATH 240, 241 and/or ENM 510 (or their equivalents) are highly recommended
Activity: Lecture
1 Course Unit
ENM 503 Introduction to Probability and Statistics
Course usually offered in fall term
Prerequisite: MATH 240 or equivalent
Activity: Lecture
1 Course Unit

ENM 510 Foundations of Engineering Mathematics - I
This is the first course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green’s Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The fall course emphasizes the study of Hilbert spaces, ordinary and partial differential equations, the initial-value, boundary-value problem, and related topics.
Course usually offered in fall term
Prerequisites: MATH 240, MATH 241 or equivalent
Activity: Lecture
1 Course Unit

ENM 511 Foundations of Engineering Mathematics - II
This is the second course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green’s Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The spring course emphasizes the study of Vector Analysis: space curves, Frenet-Serret formulae, vector theorems, reciprocal systems, co- and contra-variant components, orthogonal curvilinear systems. Matrix theory: Gauss-Jordan elimination, eigenvalues and eigenvectors, quadratic and canonical forms. Variational calculus: Euler-Lagrange equation. Tensor Analysis: Einstein summation, tensors of arbitrary order, dyads and polyads, outer and inner products, quotient law, metric tensor, Euclidean and Riemannian spaces, physical components, covariant differentiation, detailed evaluation of Christoffel symbols, Ricci’s theorem, intrinsic differentiation, generalization of Geodesics. The spring course emphasizes the study of Vector Analysis: space curves, Frenet-Serret formulae, vector theorems, reciprocal systems, co- and contra-variant components, orthogonal curvilinear systems. Matrix theory: Gauss-Jordan elimination, eigenvalues and eigenvectors, quadratic and canonical forms. Variational calculus: Euler-Lagrange equation. Tensor Analysis: Einstein summation, tensors of arbitrary order, dyads and polyads, outer and inner products, quotient law, metric tensor, Euclidean and Riemannian spaces, physical components, covariant differentiation, detailed evaluation of Christoffel symbols, Ricci’s theorem, intrinsic differentiation, generalization of Geodesics.
Course usually offered in spring term
Prerequisite: ENM 510 or equivalent
Activity: Lecture
1 Course Unit

ENM 512 Nonlinear Dynamics and Chaos
Prerequisites: Some Differential Equations and Senior or Master’s standing in Engineering or permission of the instructor
Activity: Lecture
1 Course Unit
**ENM 520 Principles and Techniques of Applied Math I**
This course is targeted to engineering PhD students in all areas. It will focus on the study of linear spaces (both finite and infinite dimensional) and of operators defined on such spaces. This course will also show students how powerful methods developed by the study of linear spaces can be used to systematically solve problems in engineering. The emphasis in this course will not be on abstract theory and proofs but on techniques that can be used to solve problems. Some examples of techniques that will be studied include Fourier series, Green's functions for ordinary and partial differential operators, eigenvalue problems for ordinary differential equations, singular value decomposition of matrices, etc.
Course usually offered in full term
Prerequisites: Basic theory of ordinary and partial differential equations
Activity: Lecture
1 Course Unit

**ENM 521 Principles and Techniques of Applied Math II**
This course is a continuation of ENM 520 (or equivalent) and deals with classical methods in applied mathematics. The topics to be covered include: Functions of a Complex Variable, Partial Differential Equations, Asymptotic and Perturbation Methods, and Convex Analysis and Variational Methods.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

**ENM 540 Topics in Computational Science and Engineering**
This course is focused on techniques for numerical solutions of ordinary and partial differential equations. The content will include: algorithms and their analysis for ODEs; finite element analysis for elliptic, parabolic and hyperbolic PDEs; approximation theory and error estimates for FEM.
Course not offered every year
Prerequisites: Background in ordinary and partial differential equations; proficiency in a programming language such as MATLAB, C, or Fortran
Activity: Lecture
1 Course Unit

**English (ENGL)**

**ENGL 001 Approaches to Genre**
Usually housed in the Program for Comparative Literature, this seminar engages questions of literary genre, including its function as a mediating presence for thinking about audience, literary history, and the marketplace. The theme of the seminar will change with the instructor. Customarily this course will be affiliated with Communication within the Curriculum (CWIC), and so will have a speaking and presentation component to it. See the English Department's website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: COML 001
Activity: Seminar
1 Course Unit

**ENGL 002 Approaches to Literary Studies**
Usually housed in the program for Comparative Literature, this seminar engages questions of method and interdisciplinarity. It will therefore cover not only a range of approaches to literary texts, but also explore how the methodologies of other disciplines might be brought efficaciously to bear on the objects of literary study. The theme of the seminar will change with the instructor. Customarily this course will be affiliated with Communication within the Curriculum (CWIC), and so will have a speaking and presentation component to it. See the English Department's website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: AFRC 003, COML 002
Activity: Seminar
1 Course Unit

**ENGL 003 Introduction to Queer Theory**
This course provides an introduction to the field of queer studies. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: GWS 003
Activity: Lecture
1 Course Unit

**ENGL 009 Introduction to Digital Humanities**
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: COML 009, HIST 009
Activity: Lecture
1 Course Unit

**ENGL 010 Introduction to Creative Writing**
A course designed to introduce students to many of the elements of creative writing, including fiction, poetry, journalism, creative nonfiction, and memoir. Students can expect to read from a variety of assigned texts, respond to regular writing prompts, and workshop their own creative work in a collaborative setting. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: This course does not satisfy the writing requirement.

**ENGL 015 Topics in Literature**
An introduction to Writing about Literature, with emphasis on a particular theme, genre, or period. See the English Department's website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Also Offered As: CIMS 015, CLST 019, COML 015, GWS 017, LALS 016
Activity: Seminar
1 Course Unit
Notes: For additional information, please see our website at: https://www.english.upenn.edu
ENGL 016 Topics in Literature
Freshman Seminars under the title "Topics in Literature" will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare's period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be applied to a period, genre, or thematic requirement within the major. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: AFRC 017, ARTH 100, CIMS 016, COML 016, URBS 106
Activity: Seminar
1 Course Unit
Notes: Freshman Seminar

ENGL 018 Old English
This course introduces students to the powerful and influential corpus of Old English literature. We will read a wide variety of texts: short poems such as The Wonderer, The Seafarer, The Wife's Lament and the passionate religious poem The Dream of The Rood; chronicles such as The Battle Of Maldon Against The Vikings, The Old Testament, Exodus and Beowulf's Conversion Of The English; and selections from the greatest of all English epics, Beowulf. Readings will be in Old English, and the first few weeks of the course will be devoted to mastering Old English prosody, vocabulary, and grammar (as well as a crash course on the early history of the English language). During the last few weeks we may read modern criticism of Old English poetry, or we will consider the modern poetic reception of Old English literature and explore theories and problems of translation, reading translations of Old English poems by Yeats, Auden, Tolkien, and Heaney. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 020 Literature Before 1660
This course will introduce students to key works of English literature written before 1660. It will explore the major literary genres of this period, as well as the social and cultural contexts in which they were produced. The course will examine how literature texts articulate changes in language and form, as well as in concepts of family, nation, and community during the medieval and early modern periods. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Activity: Seminar
1 Course Unit

ENGL 021 Medieval Literature and Culture
This course introduces students to four hundred years of English literary culture, from approximately 1100 to 1500. This period was marked by major transformations, not only with respect to government, law, religious practice, intellectual life, England's relation to the Continent (during the 100 Years War), the organization of society (especially after the Black Death), the circulation of literary texts, and the status of authors. Topics may include medieval women writers, manuscript production, literatures of revolt, courtly culture, Crusades, cross-Channel influences, and religious controversy. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 022 Romance
This course will focus on what is arguably the most extravagant, adventurous, and fantastical of the literary genres: the Romance. We will read a number of medieval and renaissance romance narratives, in verse and prose, beginning with the Arthurian romances (Malory's Morte D'Arthur, Sir Gawain And The Green Knight) and continuing with as many (and as much) of the great renaissance romances as time will allow. Sir Philip Sidney's Arcadia, Edmund Spenser's The Faerie Queen, and Lady Mary Wroth's Urania. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 024 Introduction to American and British Film and Media
This is a course on the history of Hollywood. It seeks to unravel Hollywood's complex workings and explain how the business and politics of the film industry translate into the art of film. We will trace the American film industry from Edison to the internet, asking questions such as: What is the relationship between Hollywood and independent film? How has the global spread of Hollywood since the 1920s changed the film industry? How has Hollywood responded to crises in American politics (e.g., world wars, the cold war, terrorism)? And how have new technologies such as synchronized sound and color cinematography, television and the VCR, and new digital technologies changed film and the film industry? We will look closely at representative studios (Paramount, Disney, and others), representative filmmakers (Mary Pickford, Frank Capra, and George Lucas, among many others), and we will examine the impact of industrial changes on the screen. See the English Department's website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: CIMS 024
Activity: Lecture
1 Course Unit
ENGL 025 The Age of Chaucer
In this class we come to speak as people spoke in England some six centuries ago: in medieval or 'Middle' English. We do this by reading the poetry of Geoffrey Chaucer, a great poet who has influenced everyone from William Shakespeare to Sylvia Plath. Since Middle English takes some getting use to, class assignments are not heavy; usually about 800 lines per class. A typical class might begin by looking at a few of the easier passages in the Canterbury Tales, proceed to reading the greatest poem of love in the English language (Chaucer's Troilus And Criseyde), before moving on to other contemporary writers in medieval culture. We will likely compare representations of medieval Christianity, Judaism, and Islam, as well as aspects of film adaptation by Italian filmmaker Pasolini (and perhaps by Chaucer scholar Terry Jones). We will consider what it might have been like to live secure in an age of faith; yet to live insecure, as a dizzying new profusion of trades and occupations sprang up in unprecedented "divisions of labor." We will imagine being a medieval woman, and may visit and handle medieval manuscripts. Above all, we will enjoy the poetry. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 026 Early Drama
Early drama in English had its roots as much in Christianity as in Classical antiquity. What grew into the theater of Shakespeare began as networks of strolling players and church authorizes in market towns sponsoring cycles of "miracle" and "mystery" plays. This course will introduce students to major dramatic works of the medieval and early modern periods, including plays written for the public stage, closet dramas, masques, mayoral pageants and other kinds of performances. The course will also pay attention to the development of different dramatic genres during these periods, as well as the social and cultural contexts in which they were produced. Students thus will explore the history of drama in English through the renaisance to the closing of the theaters in 1641 and their eventual reopening in 1660. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 029 Classical Antiquity and English Literature
This course will examine the relationship between English literature and that of ancient Greece and Rome. At times we will discuss how classical theories of genre and aesthetics were appropriate and recognized in medieval, renaisance, and seventeenth-century texts. What does it mean to call Hamlet and Oedipus The King tragedies, or The Frogs and The Way Of The World comedies? Should we consider the development of English drama and poetry as an extention of an imposing classical tradition or as a sustained and resistant response to it? See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: CLST 102
Activity: Lecture
1 Course Unit
Notes: ?Formerly ENGL 096?

ENGL 031 Introduction to Renaissance Literature and Culture
This course will survey the cultural history of sixteenth and seventeenth century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, social traditions, impacted literature at this vital and turbulent time of English history. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: ?Formerly ENGL 030?

ENGL 033 The Bible As Literature
Successive generations have found the Bible to be a text which requires - even demands - extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 034 Cultures of The Book
The impact of various technologies (from writing to various forms of manuscript to print to electronics) on the way the written word gives shape to a culture. The emphasis is on western cultures from Plato to the present, but participation by students with interest or expertise in non-western cultures will be of great value to the group as a whole. The course offers an ideal perspective from which students can consider metas issues surrounding their own special interests in a wide variety of fields, as well as learn to think about the way in which traditional fields of study are linked by common inherited cultural practices and constructions. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Humanities and Social Science Sector
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: ?Formerly ENGL 071?

ENGL 038 The Age of Milton
The seventeenth century was a time of revolution and upheaval, of excesses both puritanical and cavalier. It saw the execution of one kind and the restoration of another, and survived the English Civil War and the Great Fire and Great Plague of London. This course explores the literature of this century through the works of John Milton's major works (selected sonnets, Comus, Areopagitica, Paradise Lost, Paradise Regained, and Samson Agonistes), and his contemporaries. We will concentrate on a number of issues that governed writing in the period, particularly the tension between individual interiority and histoirical, social and political activity. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

Notes: ?Formerly ENGL 096?
ENGL 040 British Poetry 1660 - 1914
This course provides students with a survey of British poetry and poetics from the Restoration to the Modern period, and usually will include writers ranging from Aphra Behn and Alexander Pope to Thomas Hardy. The course may be offered in various forms, some covering less, and some more historical background. Most will provide a sampling of eighteenth-century, Romantic, and Victorian poets. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
One term course offered either term
Also Offered As: COML 040
Activity: Seminar
1 Course Unit

ENGL 041 18th-Century British Literature
An introduction to British literary and cultural history in the eighteenth century. Typically, this course will contain materials from the later seventeenth to the early nineteenth centuries—from the Restoration and Glorious Revolution through the Enlightenment, the American and French Revolutions, and the Napoleonic Wars—though it need not cover the entire period. We will read plays, poetry and prose in order to understand the aesthetic, intellectual, social and political issues of literary production and achievement in this period. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 045 18th-Century Novel
This survey of the novel addresses key questions about the novel’s "rise" in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent "rise" of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did institutions like literary reviews, libraries, and the church play in the novel’s early reception? While reading will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 046 Drama from 1660 - 1840
This course surveys drama from the Restoration through the Romantic period, and in so doing explores arguably the most tumultuous period of British and American Theater history. These years saw the reopening of the theaters in London in 1660 after their having been closed through two decades of Civil War and Puritan rule. They witnessed the introduction of actresses to the stage, the development of scenery and the modern drop-apon stage, the establishment of theatrical monopolies in 1660 and stringent censorship in 1737, and the gradual introduction, acceptance, and eventual celebration of the stage in America. Perhaps most importantly, they oversaw some of the best comedies and farces in the English language, the introduction of pantomime and the two-show evening, sustained experimentation with music and spectacle on stage, and the transformation of tragedy into a star vehicle for actors and actresses like David Garrick, Sarah Siddons, John Philip Kemble, and Edmund Kean. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 050 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brockden Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: GSWS 050
Activity: Lecture
1 Course Unit

ENGL 051 19th-Century British Literature
In 1815 in the wake of the battle of Waterloo, Great Britain controlled a staggering quarter of the world’s landmass and half of its gross national product. This course will begin with the Napoleonic Wars and this Regency aftermath to survey a century of British literature – from Romanticism through the revolutions of 1848 and the Victorian and Edwardian periods to the beginning of the First World War. Most versions of this course will read both novels and poetry, often focusing on the relation between the two and their function within nineteenth century culture. Others may incorporate drama and non-fiction prose. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 053 19th-Century American Literature
A consideration of outstanding literary treatments of American culture from the early Federalist period to the beginnings of the First World War. We will traverse literary genres, reading autobiographies and travel accounts as well as fiction and poetry. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 040
Activity: Seminar
1 Course Unit
Notes: ?Formerly ENGL 083?
ENGL 054 Sounding Poetry: Music and Literature
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course begins not on the page, but in the bardic traditions of Homer’s Iliad, which encoded many of the values of its time in oral formulas. Poetry was, however, no mere encyclopedia, but also a source of risk, as we will read in Plato’s warning against its hypnotic powers, and in the excesses of the Bacchae. We continue through 19th and 20th century attempts to recover these classic traditions (Wordsworth, Longfellow, Pound). Yet Europe was not the only center of poetic production. How does the Homeric tradition relate to living traditions of West African singing poets (griot) and Southern African praise songs? And what traces of these traditions can we hear in the blues? We will listen to early blues recordings and discuss the politics of collecting folklore, and the genius of African American modernists (Langston Hughes, Claude McKay, Georgia Douglas Johnson) who bought vernacular speech onto the page. We will read and listen to a number of 20th century poets inspired when page meets stage in jazz poetry, dub poetry, spoken word, and hip hop. Assignments will include 2 papers, 2 small-group performances, memorization exercises, and a creative adaptation of one poem. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: AFRC 054, COML 054, MUSC 054
Activity: Lecture
1 Course Unit

ENGL 055 19th-Century Novel
During the nineteenth century the novel became the dominant literary form of its day, supplanting poetry and drama on both sides of the Atlantic. In this introduction to the novelists of the period, we will read the writers who secured the novel’s cultural respectability and economic prominence. Likely authors will include Austen, the Brontes, Collins, Dickens, Eliot, Hardy, Hawthorne, Melville, Poe, Thackeray, Scott, and Stowe. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 056 Modern Drama
This course will explore the major dramatic and theatrical movements that constitute the "modern" from the successive rises of melodrama and "realism" in the nineteenth century, to those theatrical aesthetics that positioned themselves beyond or against realism at the turn of the twentieth century, to the present day. We'll explore political theatre, the invention of the avant-garde, the rise of the auteur-director, performance art, feminist and queer theatres, and the integration of non-western theatre into shared theatre practice in the colonial and post-colonial world. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: THAR 125
Activity: Lecture
1 Course Unit

ENGL 057 Literature of the Americas to 1900
This course examines U.S. literature and culture in the context of the global history of the Americas. Historical moments informing the course will range from the origins of the Caribbean slave-and-sugar trade at the beginning of the nineteenth century, to the Monroe Doctrine of 1823 and the U.S. Mexico and Spanish-American wars. Readings will include works by authors such as Frances Calderon de la Barca, Frederick Douglass, Helen Hunt Jackson, Henry Wadsworth Longfellow, Jose Marti, Herman Melville, John Rollin Ridge, Maria Amparo Ruiz de Burton, and Felix Varela. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Formerly ENGL 080

ENGL 058 Irish Literature
This course will provide an introduction to modern Irish literature, focusing on the tension between Ireland’s violent history and its heroic mythology. This tension leaves its mark not only on the ravaged landscape, but also on the English language, which displays its “foreignness” most strongly in the hands of Irish writers. Readings will span the genres of poetry, drama, fiction, and history, and will include works by Sommerville and Ross, Yeats, George Moore, Joyce, Synge, O’Casey, Beckett, Edna O’Brien, and Brian Friel. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: ?Formerly ENGL 063?

ENGL 059 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts — including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ARTH 294, COML 059, FREN 258, GSWS 294, VLST 236
Activity: Lecture
1 Course Unit
ENGL 060 Rise of the Novel
This course explores the history of the British novel and the diverse strategie of style, structure, characterization, and narrative techniques it has deployed since the late seventeenth century. While works from the eighteenth and nineteenth centuries will form the core of the reading, some versions of this course will include twentieth-century works. All will provide students with the opportunity to test the advantages and limitations of a variety of critical approaches to the novel as a genre. Readings may include works by Behn, Swift, Defoe, Richardson, Fielding, Lennox, Smollett, Burney, Scott, Austen, the Brontes, Dickens, Eliot, Hardy, Conrad, Joyce, Lawrence, Woolf, Rhys, Greene, Naipaul, Carter, Rushdie, and Coetzee. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

1 Course Unit

ENGL 061 20th-Century British Literature
This course introduces major works in twentieth-century British literature. We will read across a range of fiction, poetry, plays, and essays, and will consider aesthetic movements such as modernism as well as historical contexts including the two World Wars, the decline of empire, and racial and sexual conflict. Authors treated might include: Conrad, Yeats, Joyce, Eliot, Lawrence, Forster, Shaw, Woolf, Auden, Orwell, Beckett, Achebe, Rhys, Synge, Naipaul, Rushdie, Heaney, and Walcott. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

1 Course Unit

ENGL 062 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetics, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 064 Modern America
This course is concerned with American literature and cultural life from the turn of the century until about 1950. The course emphasizes the period between the two World Wars and emphasizes as well the intellectual and cultural milieu in which the writers found themselves. Works by the following writers are usually included: James, Eliot, Frost, Fitzgerald, Faulkner, West, Stevens, DuBois, Williams, Wharton, Stein, West, Moore, and Hemingway. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1 Course Unit
Notes: ?Formerly ENGL 084

ENGL 065 20th-Century British Novel
This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 067 American Theatre and Performance
This course examines the development of the modern American theatre from the turn of the century to the present day. Progressing decade by decade the course investigates the work of playwrights such as Eugene O’Neil, Arthur Miller, Tennessee Williams, Edward Albee, David Mamet, August Wilson and Tony Kushner, theatre companies such as the Provincetown Players and the Group Theatre, directors, actors, and designers. Some focus will also be given to major theatrical movements such as the Federal Theatre Project, Off Broadway, regional theatre, experimental theatre of the Sixties, and feminist theatre. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: CIMS 273, THAR 272
Activity: Lecture
1 Course Unit

ENGL 069 Poetry and Poetics
What is poetry and what place does it have among literary forms? What is its relation to culture, history, and our sense of speakers and audiences? This course will focus on various problems in poetic practice and theory, ranging from ancient theories of poetry of Plato and Aristotle to contemporary problems in poetics. In some semesters a particular school of poets may be the focus; in others a historical issue of literary transmission, or a problem of poetic genres, such as lyric, narrative, and dramatic poetry, may be emphasized. The course will provide a basic knowledge of scansion in English with some sense of the historical development of metrics. This course is a good foundation for those who want to continue to study poetry in literary history and for creative writers concentrating on poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit
ENGL 070 Latina/o Literature and Culture
A survey of cultural productions by Latinas/os (i.e. people of Latin American descent who have been raised in the U.S.) that usually will focus on the twentieth century, but might at times examine earlier periods instead. The course will take a culturally and historically informed approach to a wide range of novels, poems, plays, and films, and will sometimes include visual art and music. Writers and artists might include Americo Paredes, Piri Thomas, Cherrie Moraga, Sandra Cisneros, Julia Alvarez, Junot Diaz, Cristina Garcia, El Teatro Campesino, John Leguizamo, Carmen Lomas Garza, the Hernandez Brothers, and Los Tigres del Norte. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

ENGL 078 Television and New Media
As a complex cultural product, television lends itself to a variety of critical approaches that build-on, parallel, or depart from film studies. This introductory course in television studies begins with an overview of the medium's history and explores how technical and industrial changes correspond to developing conventions of genre, programming, and aesthetics. Along the way, we analyze key concepts and theoretical debates that shaped the field. In particular, we will focus on approaches to textual analysis in combination with industry research, and critical engagements with the political, social and cultural dimensions of television as popular culture. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One-term course offered either term
Also Offered As: ARTH 107, CIMS 103, COML 099
Activity: Lecture

Course not offered every year
Also Offered As: CIMS 159, COML 282, NELC 159
Activity: Lecture
1 Course Unit

ENGL 080 Literatures of Jazz
That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia most vibrant jazz venues. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 079, MUSC 080
Activity: Lecture
1 Course Unit
ENGL 081 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 081, GSWS 081, MUSC 082
Activity: Lecture
1 Course Unit

ENGL 082 Native-American Literature
From oral traditions to YouTube videos of Native American hip hop, this course surveys the diverse body of Native American literature through its many transformations across the centuries. The course will focus primarily on contemporary Native American literature, an era known as the Native American Renaissance. We will read literary works by Black Elk, Leslie Marmon Silko, Sherman Alexie, N. Scott Momaday, and others. The course will also include films such as Smoke Signals and Whale Rider. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ANTH 082, RELS 091
Activity: Lecture
1 Course Unit

ENGL 084 Music and Literature
This course introduces students to the intersection of music (both instrumental and lyrical) and literature. Some versions of the course may focus on the long history of intersection between these two media; others may focus on a particular moment, genre, or style. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 226
Activity: Lecture
1 Course Unit

ENGL 085 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional “fog of war” describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war’s traditional dependence on declaration is often warped by language games—“police action,” “military intervention,” “nation-building” or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war’s shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience. For BA Students: Humanities and Social Science S

ENGL 086 Artist in Residence
This course offers students the opportunity to study with a major figure in contemporary literature, culture, and the arts. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit
ENGL 087 Theatre, History and Culture I, Classical Athens to Elizabethan London
This course will explore the forms of public performance, most specifically theatre, as they emerge from and give dramatic shape to the dynamic life of communal, civic and social bodies, from their anthropological origins in ritual and religious ceremonies, to the rise of great urban centers, to the closing of the theaters in London in 1642. This course will focus on development of theatre practice in both Western and non-Western cultures intersects with the history of cities, the rise of market economies, and the emerging forces of national identity. In addition to examining the history of performance practices, theatre architecture, scenic conventions and acting methods, this course will investigate, where appropriate, social and political history, the arts, civic ceremonies and the dramatic structures of urban living. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 088 American Poetry
Some versions of this course survey American poetry from the colonial period to the present, while others begin with Whitman and Dickinson and move directly into the 20th century and beyond. Typically students read and discuss the poetry of William’s, Stein, Niedecker, H.D., Pound, Stevens, Fearing, Rakosi, McKay, Cullen, Wilbur, Plath, Rich, Ginsberg, Kerouac, Waldman, Creeley, Ashberry, O’Hara, Corman, Bernstein, Howe, Perelman, Silliman, and Retallack. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Lecture
1 Course Unit

ENGL 089 American Fiction
Some versions of this course survey the American novel from its beginnings to the present, focusing on the development of the form, while others concentrate on the development of American fiction in one or two periods. Readings may include novels by writers such as Brown, Cooper, Hawthorne, Melville, Wharton, Morrison, Twain, James, Adams, Chopin, Howells, Norris, Whitman, Dreiser, Fitzgerald, Hemingway, Faulkner, Dos Passos, Ellison, and Nabokov. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year

1 Course Unit

ENGL 090 Gender, Sexuality, and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Raddylye Hall, Wilia Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherie Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Activity: Lecture
1 Course Unit

ENGL 091 World Film History to 1945
This course is an introduction to the history of cinema from the 1890s to the present. In demonstrating how history energizes and complicates the movies, we will examine numerous film cultures and historical periods, including Hollywood silent cinema, Italian neo-realism, the French New Wave, recent films from Iran, and a variety of other film movements from different historical epochs and cultures. Screenings will feature movies such as Sergei Eisenstein’s THE BATTLESHIP POTEMKIN (1925), Jean Renoir’s THE GRAND ILLUSION (1937), Nicholas Ray’s REBEL WITHOUT A CAUSE (1955), Jean-Luc Godard’s CONTEMPT (1963), Spike Lee’s DO THE RIGHT THING (1989), Sally Potter’s ORLANDO (1992), and Pedro Almodovar’s TALK TO HER (2003). Our aim is to establish a broad historical and global foundation for the understanding of film as a complex exchange between art, technology, politics, and economics. Screenings will be mandatory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: ARTH 108, CIMS 101, COML 123
Activity: Lecture
1 Course Unit
ENGL 092 World Film History 1945-Present
This course is an introduction to the analysis of film as both a textual practice and a cultural practice. We will examine a variety of films—from Fritz Lang’s M (1931) to Julia Dash’s DAUGHTERS OF THE DUST (1991)—in order to demonstrate the tools and skills of “close reading.” We will concentrate on those specifically filmic features of the movies, such as mise-en-scene, cinematography, editing and sound strategies, as well as those larger organizational forms, such as narrative and non-narrative structures and movie genres. Because our responses to the movies always extend beyond the film frame, we will additionally look closely at the complex business of film distribution, promotion, and exhibition to show how the less visible machinery of the movie business also shapes our understanding and enjoyment of particular films. Along the way, we will discuss some of the most influential and productive critical schools of thought informing film analysis today, including realism, auteurism, feminism, postmodernism, and others. Screenings are mandatory. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector

Also Offered As: ARTH 109, CIMS 102, COML 124
Activity, Lecture
1 Course Unit

ENGL 093 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non-fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year

Activity, Lecture
1 Course Unit

ENGL 094 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the "New" Criticism of the 1920’s and 30’s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 094, GRMN 279
Activity, Lecture
1 Course Unit

ENGL 095 Introduction to Film Theory
This course offers students an introduction to the major texts in film theory across the 20th and 21st centuries. The course gives students an opportunity to read these central texts closely, to understand the range of historical contexts in which film theories are developed, to explore the relationship between film theory and the major film movements, to grapple with the points of contention that have emerged among theorists, and finally to consider: what is the status of film theory today? This course is required for all Cinema Studies majors, but is open to all students, and no prior knowledge of film theory is assumed.
Requirements: Close reading of all assigned texts; attendance and participation in section discussions; 1 mid-term exam; 1 take-home final exam. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course usually offered in spring term
Also Offered As: COML 116
Activity, Lecture
1 Course Unit

ENGL 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality—a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldúa, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennessy, Chandra Talpade Mohanty, and Susan Stryker. ENGL 097 Theatre, History and Culture II
This course examines theatre and performance in the context of the border urban, artistic and political cultures housing them from the Renaissance to the mid-19th century. Encompassing multiple cultures and traditions, it will draw on a variety of readings and viewings designed to locate the play, playwright, trend or concept under discussion within a specific socio-historical context. The evolution of written and performed drama, theatre architecture, and scenography will be examined in tandem with the evolution of various nationalism, population shifts, and other commercial and material forces on theatrical entertainment. Readings consequently will be drawn not only from plays and other contemporary documents, but also from selected works on the history, theory, design technology, art, politics or society of the period under discussion. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: THAR 102
Activity, Lecture
1 Course Unit
ENGL 100 Introduction to Literary Study
Literature does not exist for your protection. So dangerous is it, that Socrates argued poets ought to be banned from his ideal Republic. And Socrates himself—one of the most subversive of all poetic thinkers—was condemned to death for corrupting the young with his speeches. All great literature is unsettling and alarming. Along with its beauty and delicacy and rhetorical power and ethical force, it can be terrifyingly sublime and even downright ugly: full of contempt and horror and grandiosity and malice. From Socrates’ day to our own, countless writers have been jailed, exiled, and murdered, their works censored, banned, burned, for daring to say what others wish would remain unsaid—about religion and the State; sexuality, gender, and the body; art, science, and commerce; freedom and order; love and hate—and for saying it in ways that are aesthetically innovative, surprising, seductive, ravishingly unanticipated. This course will introduce you to fundamentals of literary style, form, and history, and to approaches to reading and interpretation. It will also mean paying close attention to your own writing, in a series of brief essays and blog contributions in which you’ll learn better how to meet the demands of college-level writing while striving always to be a dangerous writer yourself. See the English Department’s website at www.english.upenn.edu for a description of current offerings.

1 Course Unit
Notes: This course is intended to serve as a foundation for students interested in going on to become English majors.

ENGL 101 Study of an Author
This course introduces students to literary study through the works of a single author—often Shakespeare, but other versions will feature writers like Jane Austen, Geoffrey Chaucer, Herman Melville, and August Wilson. Readings an individual author across his or her entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. What is the author’s relation to his or her time? How do our author’s works help us to understand literary history more generally? And how might we understand our author’s legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study for those students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
One term course offered either term

Activity: Seminar
1 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 114 Playwriting Workshop
The expressive possibilities and limitations of the stage medium through close reading of plays of various styles and period, study of the various resources of various types of theater, and original exercise in dramatic writing. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Also Offered As: THAR 114
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit with different instructor.

ENGL 115 Workshop for Advanced Fiction Writers
An advanced workshop in the writing of fiction, with reading assignments and discussion of student works in progress. Topics may include the short story or the art of the novel. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Prerequisites: ENGL 112 or the equivalent.
Activity: Seminar
1 Course Unit
Notes: This course is not open to freshmen. May be repeated for credit with a different instructor. Permission needed from instructor; writing sample required.

ENGL 116 Screenwriting Workshop
This course will look at the screenplay as both a literary text and a blue print for production. Several classic screenplay texts will be critically analyzed (REBEL WITHOUT A CAUSE, DOCTOR STRANGELOVE, PSYCHO, etc.) Students will then embark on writing their own scripts. We will intensively focus on: character enhancement, creating "believable" cinematic dialogue, plot development and story structure, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext and visual story-telling. Class attendance is mandatory. Students will submit their works-in-progress to the workshop for discussion. See English Department's website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Also Offered As: CIMS 116
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 117 The Arts and Popular Culture
A creative writing workshop that concentrates on various aspects of writing about artistic endeavor, including criticism, reviews, profiles, interviews and essays. For the purposes of this class, the arts will be interpreted broadly, and students are able – and, in fact, encouraged – to write about both the fine arts and popular culture, including music, theater, film, fashion, photography and television. Students will write on a weekly basis, and many assignments will be tailored to each student's individual interests and are likely to include reporting and research. Writing subjects can range from a local band to a museum, from a theater group to a comedian. Course offerings may inclue Writing about Music, Writing about Popular Culture, or other topics and themes. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Students who have previously taken ENGL 117 should also be able to take this course in the spring term file.
ENGL 118 Advanced Poetry Writing Workshop
This workshop is especially valuable for creative writing concentrators in poetry within the English Major, for those who are working on longer works, or for those who wish to work on a series of poems connected by style and subject matter. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: This workshop is designed for those students who have taken the introductory workshop ENGL 113 or its equivalent and desire advance study. Students wishing to take this course must submit a writing sample as part of the selection process. May be repeated for credit with a different instructor. Writing sample required.

ENGL 120 Working with Translations
In this class we will study and translate some of the major figures in 20th century poetry, including Rainer Maria Rilke, Claire Malroux, Pablo Neruda, Cesare Pavese, Anna Akhmatova, and Bei Dao. While the curriculum will be tailored to the interests and linguistic backgrounds of the students who enroll, all those curious about world poetry and the formidable, irresistible act of translation are welcome. Students should have at least an intermediate knowledge of a language other than English. We will study multiple translations of seminal poems, render our own versions in response, and have the additional opportunity to work directly from the original. Students may also work in pairs, or groups, a portion of the course will be set up as a creative writing workshop in which to examine the overall effect of each others' translations so that first drafts can become successful revisions. While class discussions will explore the contexts and particularity of (among others) Urdu, Italian, French, and Polish poetry, they might ultimately reveal how notions of national literature have radically shifted in recent years to more polyglot and globally textured forms. Through guest speakers, essays on translation theory, and our own ongoing experiments, this course will celebrate the ways in which great poetry underscores the fact that language itself is a translation. In addition to the creative work, assignments will include an oral presentation, informal response papers, and a short final essay. See the English Department's website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: COML 121
Activity: Seminar
1 Course Unit
Notes: This course is not open to freshmen.

ENGL 121 Writing for Children
This is a course for students who have always thought it would be challenging, fun, curious, or rewarding to write a children's book. The class will be conducted as a seminar, using a wide variety of published children's books in all genres--picture books, chapter books, young fiction, older fiction as examples of successful books for young readers. See English Department website at www.english.upenn.edu for a description of current offerings.
One term course offered either term
Also Offered As: AFRC 121
Activity: Seminar
1 Course Unit

ENGL 122 Grotesque Forms
An introduction to letterpress printing and bookmaking and writing for the artist book, focusing on the history of the artist book, competence in letterpress technique, print composition and design skills, and alternative book binding. Course readings will focus on the work of Joanna Drucker and Jerome Rothenberg, and the examination of multimedia works. Field trips to local artist book collections will supplement course reading, projects, and the final project. The entire class will be taught, and practiced, through the lens of "the grotesque" in art and literature. As a final project, each student will make their own limited-edition artist book that considers the course theme of "the grotesque" through writing, image, printing, and binding. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Also Offered As: FNAR 256, FNAR 556
Activity: Seminar
1 Course Unit

ENGL 130 Advanced Screenwriting
This is a workshop-style course for students who have completed a screenwriting class, or have a draft of a screenplay they wish to improve. Classes will consist of discussing student's work, as well as discussing relevant themes of the movie business and examining classic films and why they work as well as they do. See English Department website at www.english.upenn.edu for a description of current offerings.
One term course offered either term
Also Offered As: CIMS 130
Activity: Seminar
1 Course Unit
Notes: This course is not open to freshman.

ENGL 135 Creative Non-Fiction Writing
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. See the English Department's website at www.english.upenn.edu for a description of the current offerings
One term course offered either term
Also Offered As: AFRC 134, ENGL 435, GSWS 135, WRIT 135
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 144 Speculative Fiction
A creative writing course devoted to speculative fiction. Topics may include science fiction, fantasy, horror, or other related genres. Students will study the literary origins of these genres and create their own original work. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Activity: Seminar
1 Course Unit
ENGL 145 Advanced Non-Fiction Writing
An advanced writing course devoted to creative nonfiction. Topics may include writing for literary magazines; writing for journals of opinion; memoir; family history; travel writing; documentary; or other topics and genres in which literary structures inform the writing of nonfiction prose. Offerings may address writing as a public act, questions of ethics and policy, methods of research and fact-checking, marketing, and how to understand and enter the world of publishing. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Also Offered As: AFRC 145, GSWS 145, URBS 273
Activity: Seminar
1 Course Unit
Notes: This course is not open to freshmen. May be repeated for credit with a different instructor.

ENGL 155 Writing in the Documentary Tradition
This course will function as a workshop, with a select group of students. It’s a course that will honor the spirit and tradition of “documentary” writing. The word “documentary” has meant many things over time. Here, it means a kind of nose-close observation and reportage. It means a level of being with one’s subject matter in a way that other creative writing courses do not allow because of their format and structure. In English 155, a student writer at Penn will dare to “hang” with a topic—a girl’s high-school basketball team; a medical intern in a HUP emergency room; a janitor doing the graveyard shift in a classroom building; a food-truck operator crowding the noontime avenues; a client-patient in the Ronald McDonald House near campus; a parish priest making a solitary and dreary and yet redemptive rounds of the sick and the dying in the hospital—for the entire term. At the term’s end, each writer in the course will have produced one extended prose work: a documentary piece of high creative caliber. This is our goal and inspiration. The piece will be 35 to 40 pages long, at minimum. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit

ENGL 156 Photographs and Stories
A creative writing course built entirely around the use of photographs, and the crafting of compelling nonfiction narratives from them. The essential concept will be to employ photographs as storytelling vehicles. So we will be using curling, drugstore printed Kodak shots from our own family albums. We will be using searing and famous images from history books. We will be taking things from yesterday’s newspaper. We will even be using pictures that were just made by the workshop participants outside the campus gates. In all of this, there will be one overriding aim to achieve memorable, full-bodied stories. To locate the strange, evocative, storytelling universes that are sealed inside the four rectangular walls of photograph. They are always there, if you know how to look. It’s about the quality of your noticing, the intensity of your seeing. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit

ENGL 157 Introduction to Journalistic Writing
This workshop is designed as an introduction to journalistic writing. Topics may include Writing about Food, Journalism and the Environment, Digital Newswriting, and other themes. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit

ENGL 158 Advanced Journalistic Writing
A workshop in creative writing devoted to original student work in journalism. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit

ENGL 159 Political Writing in the Digital Age
A primer on writing about U.S. politics, in an era of major technological upheaval and serious voter polarization. Today’s 24/7, wifi’d, blogging environment along with the rise of new conservative media are changing the ways that writers cover politics and deliver the information. See English Department website at www.english.upenn.edu for a description of current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 160 Long-form Journalism
This course in long-form journalism is required of all journalistic writing minors. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit

ENGL 161 The Art of the Profile
One of the toughest challenges for any journalist is to master the art of the profile writing. In this course, students will read and critique some of the classic profile articles of the past 40 years and, most importantly, write profile articles of their own. Writing about people is often very rewarding, but rarely easy. In this course, students will debate the questions that have plagued and energized journalists for generations:
How do you persuade someone that theirs is a worthy topic for a profile?
How do you ask sensitive questions? If the person is a celebrity, how do you avoid being manipulated into writing a "puff piece"? Do you tape the interviews or just take notes? How do you structure a profile in order to keep the reader’s attention? Is it even possible to capture the essence of a person on the written page? Are you a friend to the profile subject—or a manipulator? A journalist at The New Yorker once said that a writer’s relationship with the profile subject is "a kind of love affair." On the other hand, a famous author once said that a profile writer is typically "gaining their trust and betrayal without remorse." Which is closer to the truth? Students, in addition to writing their own profiles, will kick around these questions while reading some of the best contemporary profile writers, including Susan Orlean, Gay Talese, David Remnick, Mark Bowden, and Judy Bachrach. The instructor will also offer several of his own. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit
ENGL 162 Covering Political Elections
In this course, students with a passion for both writing and politics will have the unique opportunity to track the news as it unfolds week by week, to critique it in class, and, most importantly, to write about it in a variety of formats, ranging from "straight" news to informed opinion. Students can expect spirited class debate about the elusive nature of "objectivity," the often thin line between truth and rumor, the challenges of fact-checking a candidate’s "spin," the challenges of writing responsibly in an era when even facts seem to be polarized, the challenges of analyzing election results and writing effectively, the growing pressure on journalists to reveal their political beliefs, and much more. Some of the writing will happen in class; students will view excerpts from election debates and broadcasts, and will file their reports "on deadline." And students will also have a chance, in class, to critique some of the nation’s best political writers—reporters, feature writers, columnists, and bloggers. Topics for this course may include reporting on Congressional midterms and reporting on the Presidential election. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: This course is not open to freshmen.

ENGL 165 Writing through Culture and Art
This is a year-long creative writing class, given as a collaboration between the Center for Programs in Contemporary Writing and the Philadelphia Museum of Art. Students will be encouraged to develop correspondent methods of responding to the PMA’s exhibitions. The class will involve regular trips to attend concerts, museums and lectures. The students will have access to the most cutting-edge artists today via class visits and studio visits. English 165 will culminate in a publication of student work. See English Department website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit with a different instructor.

ENGL 199 Independent Study in Writing
Supervised study in writing.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Interested students must receive permission by the professor and the English Department.

ENGL 200 Junior Research Seminar
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address debates within the field/period/topic of the course, research methods, and advanced writing and critical thinking issues. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: This course is required of most English Majors.

ENGL 209 Topics in Digital Humanities
This course focuses intensively on a particular issue in digital humanities (DH) and computational approaches to literary texts. See the English Department website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 210 Critical-Creative Approaches to Literature
These courses enable students to think and write creatively as a means to the critical understanding of literary texts. The topic of the course will vary from semester to semester, but the course will always seek to advance students understanding of literature, its formal elements, and its relationship to culture and history through the use of creative projects instead of or alongside more traditional critical writing. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: CIMS 210
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors.

ENGL 218 Topics In Old English
This seminar explores an aspect of Anglo-Saxon culture intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English majors

ENGL 219 Topics in the History of Language
This course investigates in-depth a topic in the history of the English language or of linguistic theory more broadly. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 095, RUSS 095
Activity: Seminar
1 Course Unit

ENGL 220 Study Abroad
See the English Department’s website at www.english.upenn.edu.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 221 Topics In Medieval Literature
This seminar explores an aspect of medieval literature intensively; specific course topics will vary from year to year. Topics in the past have included the medieval performance, medieval women, and medieval law and literature. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: ?Formerly ENGL 220?. Spaces will be reserved for English majors
ENGL 222 Topics in Romance
This seminar explores an aspect of epic or romance intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 076
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English majors

ENGL 225 Topics in Chaucer
This course explores an aspect of Chaucer's writings intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 226 Topics in Drama to 1660
This course explores an aspect of drama before 1660 intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English majors

ENGL 229 Topics in Classicism and Literature
This advanced seminar will examine the classical backgrounds to English poetry, in particular the Biblical and Greco-Roman antecedents to Renaissance lyric verse and verse drama (such as, preeminently, Shakespeare). Different versions of this course will have different emphases on Biblical or Hellenist backgrounds. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: CLST 360, COML 304, GSWS 228
Activity: Seminar
1 Course Unit
Notes: ?Formerly ENGL 296?. Spaces will be reserved for English majors

ENGL 231 Topics in Renaissance Literature
This course explores an aspect of Renaissance literature intensively; specific topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 300, ITAL 300
Activity: Seminar
1 Course Unit
Notes: ?Formerly ENGL 230?. Spaces will be reserved for English majors

ENGL 234 Topics in the History of the Book
This course explores an aspect of the History of the Book intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 411, HIST 411
Activity: Seminar
1 Course Unit
Notes: ?Formerly ENGL 297 or 298?. Spaces will be reserved for English majors

ENGL 236 Topics in Renaissance Drama
Through specialized readings, writing assignments, and in-class acting exercises, the class will develop methods of interpreting Shakespeare's plays through theatrical practice. Topics include Shakespeare's use of soliloquy, two and three person scenes, the dramatic presentation of narrative source material, modes of defining and presenting the "worlds" of the plays, and the use of theatrical practice to establish authoritative text. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: THAR 236
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 238 Topics in 17th-Century Literature
This course explores an aspect of 17th-century literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 241 Topics in 18th-Century Literature
This course explores an aspect of 18th-century literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 239
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 243 Topics in Early American Literature
This course explores an aspect of early American literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors
ENGL 245 Topics In The 18th-Century Novel
This course explores an aspect of 18th-century novel intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: GSWS 245
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 246 Spirituality and Global Warning
This course listed as secondary in ENGL and primary in RELS 246. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ENVS 246, RELS 246
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English majors

ENGL 248 Topics In Trans-Atlantic Literature
This course examines in-depth a topic in trans-Atlantic literature, literature that emerges from and deals with the links and tensions between Europe and the Americas. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English majors

ENGL 250 Topics In Romanticism
This course explores an aspect of Romantic literature intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: HIST 491
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 251 Topics In 19th-Century Literature
This course explores an aspect of 19th-century literature intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 253 Topics In 19th-Century American Literature
This course explores an aspect of 19th-century American literature intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: HIST 231
Activity: Seminar
1 Course Unit
Notes: Formerly ENGL 283? Spaces will be reserved for English majors

ENGL 254 Topics in Music and Literature
The particular of the seminar will change depending on the instructor, and so it is particularly recommended that students consult the actual course description for that semester. These are housed on the Department of English’s website at: www.english.upenn.edu
Course not offered every year
Also Offered As: COML 109
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors.

ENGL 255 Topics In The 19th-Century Novel
This course explores an aspect of the 19th-century novel intensively, specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 256 Topics In Modern Drama
This course explores an aspect of Modern drama intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: THAR 274
Activity: Seminar
1 Course Unit
Notes: Formerly ENGL 271?. Spaces will be reserved for English majors

ENGL 258 Topics In Irish Literature
This course explores an aspect of modern Irish literature intensively; specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 259 Topics In Modernism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Past offerings have included seminars on the avant-garde, on the politics of modernism, and on its role in shaping poetry, music, and the visual arts. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ARTH 385, COML 140, FREN 259, GRMN 249, GSWS 269
Prerequisites: Prerequisites some knowledge of 20th-century poetry.
Activity: Seminar
1 Course Unit
Notes: Formerly ENGL 210? Spaces will be reserved for English majors

ENGL 260 Topics In The Novel
This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. Specific course topics will vary from year to year. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors
ENGL 261 Topics In 20th-Century Literature
The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
