INTEGRATED STUDIES (INTG)

INTG 201 Visualizing the Past
Course not offered every year
Activity: Lecture
1 Course Unit

INTG 301 The Evolving Self from Antiquity to Contemporary Biology
This course will examine ideas about human nature by considering the human being as an organism. Questions of what counts as life will unfold from a close scrutiny of the idea of agency. We will work through five main avenues: Agency & Causes, Genetic Self, Evolutionary Self, Ecological Self, and the Ethical Self. In each investigation we will pair ancient Greek ideas with those from contemporary philosophy of biology. The pairing will aim, to some extent, to expand our historical understanding of how such ideas change over time, and to a greater extent, to sharpen our own understanding of human nature itself.
Taught by: Tuma, Struck
Activity: Seminar
1 Course Unit
Notes: BFS seminar designation (looping in Lauren Orr, BFS admin team)
