PSYCHOLOGY, MINOR

Studies in psychology introduce students to contemporary understandings of how organisms perceive, learn, think and interact with one another, how they develop, how they are motivated and how, individually and as members of species, they may be compared with one another. Psychology at Penn is a diverse discipline, with topics ranging from neuroscience to psychopathology.

The Minor in Psychology consists of six courses. It is intended to give the student a broad base in Psychology without the commitment to the full course load of the major. The requirements are therefore comparable to those of the major in type but reduced in number. At least three of the six required course units must be taken at Penn. In addition, students minoring in psychology must have a minimum of 3 PSYC courses that they count only towards the minor and not towards any other major or minor.
