

CITY & REGIONAL PLANNING: PUBLIC & PRIVATE DEVELOPMENT, MCP

The Master of City Planning core curriculum encompasses the basic skills and knowledge required of all planners regardless of their specialization, and is a hallmark of our cutting-edge and practical approach to educating city planners. Students who complete the core will understand the legal and historical basis of city planning; they will know how to use a wide variety of population and economic data to understand local communities; and they will understand the form and arrangement of cities and metropolitan areas around the world. Most important, they will understand which planning approaches work best in which contexts and circumstances.

Students in the Public & Private Development concentration will learn the planning, design, entrepreneurial, and financing principles of developing for-profit and community-oriented housing and commercial development projects; how to put together development proposals and plans that meet the needs of tenants, the marketplace, and the community; how to develop projects that are economically, socially, and environmentally sustainable; and how private developers can work in partnership with cities and towns, redevelopment agencies, non-profits, and community groups to create affordable housing and public-private development partnerships. These same skills and abilities will be widely valued outside the United States, especially in growing areas of Asia and South America.
